21	V_{IN}		Analog Input.
25	V_{BRS}		Generates approximately +0.4V when shorted with V_{RB} .
26	V_{REF}		Clamp Reference Voltage Input. Clamps so that the reference voltage and the input signal during clamp interval are equal.

Timing Chart

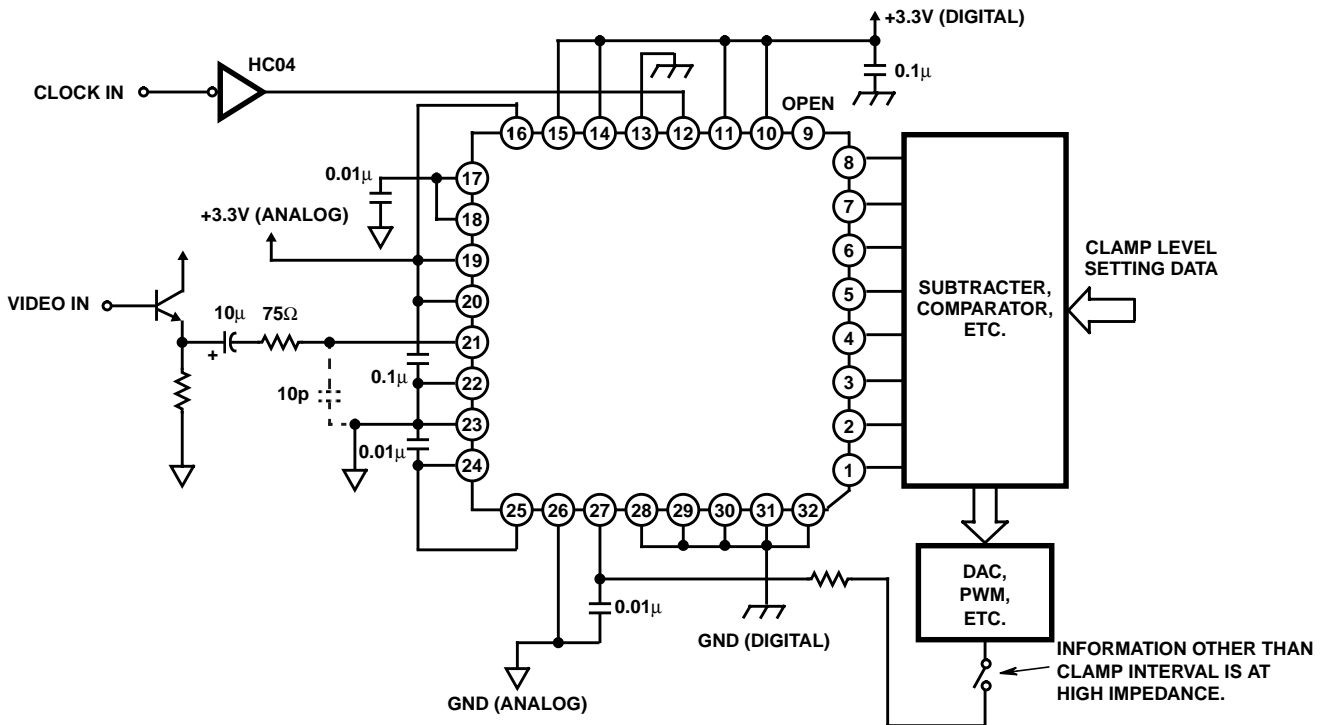

Typical Application Circuits

NOTE:

1. The clamp pulse is latched by the sampling clock of ADC, but that is not necessary for basic clamp operation. However, slight small beat may be generated as Vertical sag according to the relationship between the sampling frequency and the clamp pulse frequency. At such time, the latch circuit is effective in this case.

NOTES:

2. The relationship between the changes in CCP voltage (Pin 27) and in V_{IN} voltage is positive phase.
3. $\Delta V_{IN} / \Delta V_{CCP} = 3.0$ ($f_s = 20$ MSPS).
