HIP0051

0.25A/50V Octal Low Side Power Driver with Serial Bus Control

Features

- **Eight Open Drain - NDMOS Low Side Drivers Each Capable of 250mA**

- **High Voltage Power BiMOS with Low Idle and Standby Current**

- **Over-Voltage Clamp Protection**
  - **Each Output. . . . . 50V Typical**

- **Serial Data Input, Parallel Output Power Drive**

- **Common Enable for Output Drivers and Data Storage Register**

- **-40ºC to 85ºC Operating Range**

Applications

- **Automotive and Industrial Systems**

- **Solenoids, Relays and Lamp Drivers**

- **Logic and μP Controlled Drivers**

- **Robotic Controls**

Description

The HIP0051 is a logic controlled, eight channel Octal Low Side Power Driver. As shown in the Block Diagram, the outputs are controlled via the serial data interface which allows the data to be shifted out, allowing control of other cascaded serial devices.

The HIP0051 is fabricated in a Power BiMOS IC process, and is intended for use in automotive and other applications having a wide range of temperature and electrical stress conditions. It is particularly suited for driving lamps, displays, relays, and solenoids in applications where low operating power, high breakdown voltage, and high output current at high temperature is required.

Absolute Maximum Ratings

Output Voltage, V_{OUT} (Note 1) . . . . -0.3V to 40V
Input Voltage, V_{IN} . . . .-0.3V to V_{CC} + 0.3V
Logic Supply Voltage, V_{CC} . . . . -0.3V to +7V
Output Clamp Energy, 25°C (5ms Pulse) 75mJ
Continuous Output Load Current, I_{LOAD} (Each Output) 0.25A
Continuous Output Current, I_{LOAD} (All Outputs ON, Note 2) . .1.69A
Peak Output Current
    Each Output, Other Outputs OFF . . . . ±2A
    Peak Avalanche Current (3ms duration) 1A

Operating Conditions

Operating Ambient Temperature Range, T_A . . . . -40°C to 85°C
Operating Logic Supply Voltage Range, V_{CC} . . . . . +4.5V to +5.5V
Power Output Driver Voltage Range . . . . 0 to V_{OC}
Max. Supply Current, with 100mA each Output 100μA
Max. Supply Current, with No Load, Outputs OFF 100μA
Logic Input High Voltage . . . . .0.7xV_{CC}
Logic Input Low Voltage . . . . .0.2xV_{CC}
Typical Output R_{DSON} Channel Resistance 2Ω
Typical Output Rise Time 4μs
Typical Output Fall Time 10μs

Thermal Information

Thermal Resistance (Typical, Note 3) θ_{JA} (°C/W)
    SOIC Package 100
Maximum Junction Temperature . . . . 150°C
Maximum Storage Temperature Range, T_{STG} . . . . . -55°C to 150°C
Maximum Lead Temperature (Soldering 10s) . . . . 300°C
    (SOIC Lead Tips Only)

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTES:

1. The MOSFET Output Drain is internally clamped with a Drain-to-Gate zener diode that turns-on the MOSFET; holding the Drain at the Output Clamp voltage V_{OC}.

2. The maximum continuous current with all outputs on is limited by package dissipation. At 25°C ambient temperature, the maximum equal current with all outputs ON is 211mA in each output for a total of 1.69A. At a maximum ambient temperature of T_A = 85°C and r_{DSON}(Max) = 3.5Ω, each output is limited to 152mA and the total current for all 8 outputs ON is 8 x 152mA = 1.22A.

3. θ_{JA} is measured with the component mounted on an evaluation PC board in free air.

Electrical Specifications V_{CC} = 4.5V to 5.5V, V_{BATT} = 8V to 16V, T_A = -40°C to 85°C, Unless Otherwise Specified.

Pin Descriptions

V_{CC} - Logic Power Supply

The V_{CC} pin is the positive 5V logic voltage supply input for the IC. The normal operating voltage range is 4.5 to 5.5V. When switched on, the POR forces all outputs off.

SCK - Serial Clock

SCK is the clock input for the SPI interface. Output ON/OFF control data is clocked into an eight stage shift register on the rising edge of an external clock. This input has a Schmitt trigger.

SI - Serial Data In

SI is the Serial Data Input pin for the SPI interface. The eight Power Outputs are controlled by the serial data via the Output Data Buffer. This input has a Schmitt trigger.

STR - Strobe for the SPI Interface

When the STR pin is high, data from the 8-bit shift register is passed into the Output Data Buffers where it controls the ON-OFF state of each output driver. The data is latched in the Output Data Buffers on the trailing edge of the STR pulse. This input has a Schmitt trigger.

RENESAS

FIGURE 1. LOGIC TIMING CONTROL SPECIFICATIONS

SO - Serial Data Out

The Serial Data Out allows other ICs to be serially cascaded. For example, a 10-bit LED driver may be located behind the HIP0051. A controlling microprocessor may then clock out 18 bits of information and simultaneously strobe both parts. The cascaded ICs may be the same or different from the HIP0051.

DR0 to DR7 - Outputs 0 Thru 7

The Drain Output pins of the DMOS Power Drivers are capable of sinking 250mA.

$\overline{EN}$ - Enable

The Enable pin is an active low enable function for all eight output drivers. When $\overline{EN}$ is high, drive from the Output Data Buffer

is held low and all output drivers are disabled. When $\overline{EN}$ is low, the output drivers are enabled and data in the 8-bit shift register is transparent to the Output Data Buffer. This input has a Schmitt trigger.

LGND and GND - Ground

LGND is the logic input power supply ground pin. The GND pins are common grounds for the Power Output Drivers. The power supplies for the logic and power circuits require a common ground. To minimize ground bounce at the logic input, the external ground return path for the GND pin should be separate from the LGND pin. LGND and GND have common substrate ground connections on the chip.

NOTES:

1. Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication Number 95.

2. Dimensioning and tolerancing per ANSI Y14.5M-1982.

3. Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusion and gate burrs shall not exceed 0.15mm (0.006 inch) per side.

4. Dimension "E" does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.25mm (0.010 inch) per side.

5. The chamfer on the body is optional. If it is not present, a visual index feature must be located within the crosshatched area.

6. "L" is the length of terminal for soldering to a substrate.

7. "N" is the number of terminal positions.

8. Terminal numbers are shown for reference only.

9. The lead width "B", as measured 0.36mm (0.014 inch) or greater above the seating plane, shall not exceed a maximum value of 0.61mm (0.024 inch)

10. Controlling dimension: MILLIMETER. Converted inch dimensions are not necessarily exact.

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.

2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.

3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.

4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.

5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
    "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
    "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.
    Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.

6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.

7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.

8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.

9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.

10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.

11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.

12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
