## GENERAL DESCRIPTION

The **HMC-C056** is a  $\times 2$  active broadband frequency multiplier module, using gallium arsenide (GaAs), pseudomorphic high electron mobility transistor (pHEMT) technology in a miniature HSM. When driven by a 6 dBm signal, the multiplier provides 14 dBm typical output power from 8 GHz to 21 GHz. The  $f_{OUT}$  isolation is 16 dBc at 15 GHz with respect to the output signal level.

## FUNCTIONAL BLOCK DIAGRAM

Figure 1.

The **HMC-C056** is a frequency multiplier, featuring dc blocked inputs/outputs. The **HMC-C056** is ideal for use in local oscillator (LO) multiplier chains for point to point and VSAT radios yielding reduced devices count vs. traditional approaches. The low additive SSB phase noise of -142 dBc/Hz at 100 kHz offset has minimal impact on system level noise performance.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

### ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

## PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

Table 3. Pin Function Descriptions

Pin No.	Mnemonic	Description
1	RF <sub>IN</sub>	Radio Frequency Input. This pin is ac-coupled and matched to 50 Ω. RF <sub>IN</sub> uses a female SMA field replaceable connector. RF ground is supplied by the outer conductor of the SMA connector. See Figure 3 for the interface schematic.
2, 6	GND	Ground. One of these pins must be connected to power supply ground. See Figure 4 for the interface schematic.
3	+V <sub>DC</sub>	Positive Power Supply Voltage. Positive power supply voltage for the multiplier includes a linear regulator. See Figure 5 for the interface schematic.
4	RF <sub>OUT</sub>	Radio Frequency Output. This pin is ac-coupled and matched to 50 Ω. RF <sub>OUT</sub> uses a female SMA field replaceable connector. RF ground is supplied by the outer conductor of the SMA connector. See Figure 6 for the interface schematic.
