

FEATURES

Wide input bandwidth: 1 to 23 GHz
Wide dynamic range: 50 dB up to 23 GHz
Single positive supply: 3.3 V
Excellent stability over temperature
Fast rise/fall time: 12 ns/65 ns
16-lead 3 mm × 3 mm SMT package: 9 mm²

APPLICATIONS

Point-to-point microwave radio
VSAT
Wideband power monitoring
Receiver signal strength indication (RSSI)
Test and measurement

GENERAL DESCRIPTION

The **HMC1094** logarithmic detector converts RF signals at its input to a proportional dc voltage at its output. The **HMC1094** employs successive compression topology that delivers high dynamic range over a wide input frequency range.

As the input power is increased, successive amplifiers move into saturation one by one, creating an approximation of the logarithm function. The output of a series of detectors is summed, con-

verted into the voltage domain, and buffered to drive the LOGOUT output.

The **HMC1094** provides a nominal logarithmic slope of 18 mV/dB and an intercept of -113 dBm at 23 GHz. Ideal as a log detector for high volume microwave radio and VSAT applications, the **HMC1094** is housed in a compact 3 mm × 3 mm RoHS compliant SMT plastic package.

ABSOLUTE MAXIMUM RATINGS

Table 2.

Parameter	Rating
Supply Voltage, V_{CC}	3.6 V
RF Input Power, RFIN	13 dBm
RF DC Level	1.1 V
Maximum Junction Temperature (T_J)	125°C
Continuous Power Dissipation (P_{DISS}) at $T_A = 85^\circ\text{C}$ (Derate 65.4 mW/°C Above 85°C)	2.62 W
Thermal Resistance ($R_{\theta JH}$) (Junction to Ground Paddle)	15.29°C/W
Storage Temperature	-65°C to +150°C
Operating Temperature	-40°C to +85°C
ESD Sensitivity Level (HBM)	Class 1B

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

Figure 2. Pin Configuration

Table 3. Pin Function Descriptions

Pin No.	Mnemonic	Description
1	GND	Ground. This pin must be connected to a high quality RF/dc ground.
2	RFIN	RF Input. The dc voltage level of the RF input should be 0 V. If the RF input has a dc level different than 0 V, use a dc block capacitor.
3	GND	Ground. This pin must be connected to a high quality RF/dc ground.
4	RSV	Reserved. This pin is reserved for internal use; leave this pin floating.
5	RSV	Reserved. This pin is reserved for internal use; leave this pin floating.
6	GND	Ground. This pin must be connected to a high quality RF/dc ground.
7	GND	Ground. This pin must be connected to a high quality RF/dc ground.
8	NC	No Connect. No connection is necessary for this pin; this pin may be connected to RF/dc ground without affecting performance.
9	RSV	Reserved. This pin is reserved for internal use; leave this pin floating.
10	RSV	Reserved. This pin is reserved for internal use; leave this pin floating.
11	LOGOUT	Log Out. The log out load should be at least 1 kΩ or higher.
12	VTEMP	Temperature Sensor Output. This pin requires a minimum 10 kΩ resistance or higher.
13	V _{CC}	Bias Supply. Connect a supply voltage to this pin with appropriate filtering.
14	V _{CC}	Bias Supply. Connect a supply voltage to this pin with appropriate filtering.
15	V _{CC}	Bias Supply. Connect a supply voltage to this pin with appropriate filtering.
16	V _{CC}	Bias Supply. Connect a supply voltage to this pin with appropriate filtering.
	EP	Exposed Pad. Connect the exposed pad to a high quality RF/dc ground.

¹ Circuit board material: Rogers 4350B or Arlon 25 FR.

The circuit board used in the application uses RF circuit design techniques. Signal lines should have 50 Ω impedance whereas the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown in Figure 21. Use a sufficient number of via holes to connect the top and bottom ground planes.
