

HPA800R1K4PD-G

General Description:

HPA800R1K4PD-G, the silicon N-channel Enhanced MOSFETs, is obtained by the super junction technology which reduces the conduction loss, improve switching performance and enhance the avalanche energy. The transistor can be used in various power switching circuit for system miniaturization and higher efficiency. The package type is TO-220F, which accords with the RoHS standard.

Features:

- Fast Switching
- Low Gate Charge
- Low Reverse transfer capacitances
- 100% Single Pulse avalanche energy Test
- Halogen Free
- Zener-Protected

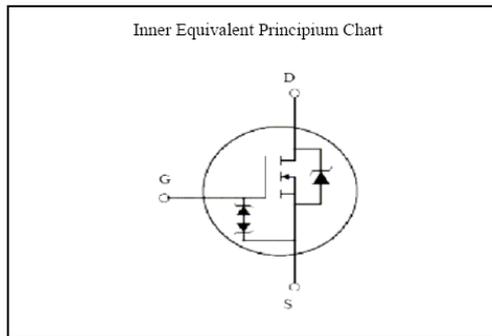

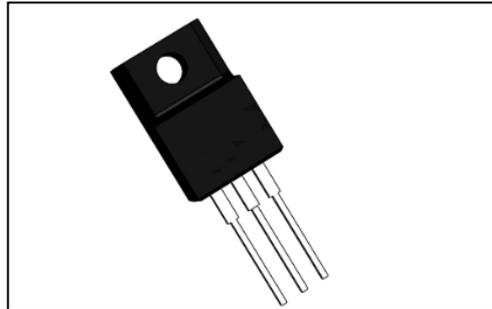

Applications:

Power switch circuit of adaptor, charger and LED.

Absolute (Tj= 25°C unless otherwise specified):

<p>The built-in back-to-back Zener diodes have specifically been designed to enhance not only the device's ESD capability, but also to make them safely absorb possible voltage transients that may occasionally be applied from gate to source. In this respect the Zener voltage is appropriate to achieve an efficient and cost-effective intervention to protect the device's integrity. These integrated Zener diodes thus avoid the usage of external components.</p>

**Warnings**

1. Exceeding the maximum ratings of the device in performance may cause damage to the device, even the permanent failure, which may affect the dependability of the machine. It is suggested to be used under 80 percent of the maximum ratings of the device.
2. When installing the heat sink, please pay attention to the torsional moment and the smoothness of the heatsink.
3. VDMOSFET is the device which is sensitive to the static electricity, it is necessary to protect the device from being damaged by the static electricity when using it.
4. This publication is made by Huajing Microelectronics and subject to regular change without notice.
