

## Radiation Hardened High Speed, Quad SPST, CMOS Analog Switch

The HS-201HSRH is a monolithic CMOS analog switch featuring power-off high input impedance, very fast switching speeds and low ON resistance. Fabrication on our DI RSG process assures SEL immunity and only very slight sensitivity to low dose rate (ELDRS). These Class V/Q devices are tested and guaranteed for 300krad (Si) total dose performance.

Power-off high input impedance enables the use of this device in redundant circuits without causing data bus signal degradation. ESD protection, overvoltage protection, fast switching times, low ON resistance, and guaranteed radiation hardness, make the HS-201HSRH ideal for any space application where improved switching performance is required.

Specifications for Rad Hard QML devices are controlled by the Defense Supply Center (DSCC). The SMD numbers listed here must be used when ordering flight units.

**Detailed electrical specifications for this device are contained in SMD 5962-99618. A "hot-link" is provided on our homepage for downloading.**
