				1250		at 0°C

Note :

(1) Lamp current is measured with current meter for high frequency as shown below. Specified values are for a lamp.

- (2) Lamp frequency may produce interference with horizontal synchronous frequency and this may cause line flow on the display. Therefore lamp frequency shall be detached from the horizontal synchronous frequency and its harmonics as far as possible in order to avoid interference.
- (3) Life time (Hr) of a lamp is defined as the time in which it continues to operate under the condition of $T_a=25\sim 35^\circ\text{C}$ and $I_L=6\text{ mA(max)}$ until one of the following event occurs:
1. When the brightness becomes 50% .
 2. When the effective ignition length becomes 90% .

Clock period	t5	15	15.38	—	ns	⁵⁾

Note 1) Refer to TIMING CHART at page18 and LVDS specification (DS90CF364MTD) by National Semiconductor Corporation.

Note 2) When ENAB is fixed to “H” level or “L” level after NCLK is supplied, the panel displays black with some flicker.

Note 3) If NCLK is fixed to “H” level or “L” level, for certain period while ENAB is supplied, the panel may be damaged.

Note 4) Do not make t1 and t3's fluctuate . If t1 or t3 is fluctuate, the panel displays black.

Note 5) Please adjust LCD operating signal timing and FL driving frequency, to optimize the display quality. There is a possibility that flicker is observed by the interference of LCD operating signal timing and FL driving condition (especially driving frequency).

Note 6) All input condition(level&timing) refers to LVDS DS90CF364MTD specification.

- (3) In case of V_{DD} = off level, please keep the level of input signal on the low or keep a high impedance.
- (4) T4 should be measured after the module has been fully discharged between power off and on period.
- (5) Interface signal shall not be kept at high impedance when the power is on.

13. GENERAL PRECAUTION

(1) USE RESTRICTION

This product is not authorized for use in life supporting systems, aircraft navigation control systems, military systems and any other application where performance failure could be life-threatening or otherwise catastrophic.

(2) DISASSEMBLING OR MODIFICATION

Do not disassemble or modify the module. It may damage sensitive parts inside LCD module, and may cause scratches or dust on the display. HannStar does not warrant the module, if customers disassemble or modify the module.

(3) BREAKAGE OF LCD PANEL

(3.1) If LCD panel is broken and liquid crystal spills out, do not ingest or inhale liquid crystal, and do not contact liquid crystal with skin.

(3.2) If liquid crystal contacts mouth or eyes, rinse out with water immediately.

(3.3) If liquid crystal contacts skin or cloths, wash it off immediately with alcohol and rinse thoroughly with water.

(3.4) Handle carefully with chips of glass that may cause injury , when the glass is broken.

(4) ELECTRIC SHOCK

(4.1) Disconnect power supply before handling LCD module.

(4.2) Do not pull or fold the CCFL cable.

(4.3) Do not touch the parts inside LCD modules and the fluorescent lamp's connector or cables in order to prevent electric shock.

(5) ABSOLUTE MAXIMUM RATINGS AND POWER PROTECTION CIRCUIT

(5.1) Do not exceed the absolute maximum rating values, such as the supply voltage variation, input voltage variation, variation in parts' parameters, environmental temperature, etc., otherwise LCD module may be damaged.

(5.2) Please do not leave LCD module in the environment of high humidity and high temperature for a long time.

(5.3) It's recommended to employ protection circuit for power supply.

(6) OPERATION

(6.1) Do not touch, push or rub the polarizer with anything harder than HB pencil lead.

(6.2) Use fingerstalls of soft gloves in order to keep clean display quality, when persons handle the LCD module for incoming inspection or assembly.

(6.3) When the surface is dusty, please wipe gently with absorbent cotton or other soft material.

(6.4) Wipe off saliva or water drops as soon as possible. If saliva or water drops contact with polarizer for a long time, they may causes deformation or color fading.

(6.5) When cleaning the adhesives, please use absorbent cotton wetted with a little petroleum benzine or other adequate solvent.

(7) Mechanism

Please mount LCD module by using mouting holes arranged in four corners tightly.

(8) STATIC ELECTRICITY

(8.1) Protection film must remove very slowly from the surface of LCD module to prevent from electrostatic occurrence.

(8.2) Because LCD module use CMOS-IC on circuit board and TFT-LCD panel, it is very weak to electrostatic discharge. Please be careful with electrostatic discharge. Persons who handle the module should be grounded through adequate methods.

(9) STRONG LIGHT EXPOSURE

The module shall not be exposed under strong light such as direct sunlight. Otherwise, display characteristics may be changed.

(10) DISPOSAL

When disposing LCD module, obey the local environmental regulations.
