Description:

Hi-Optel's HSFF-03-1311S SFF Transceiver is a high performance, cost effective module for serial telecom and datacom applications, all versions are compliant with SONET/SDH recommendations from OC-03 specifications. This module is designed for Single-Mode fiber and operates at the wavelength of 1310nm. The transmitter section incorporates FP and driver IC with temperature compensation and automatic power control circuit. The receiver section incorporates an efficient InGaAs/InP PIN photodiode and transimpedance with AGC for wide dynamic range. A LVPECL data interface simplifies interface to external circuitry. It is packaged in a small form factor multisourced 2X5 pin metal housing for excellent EMI shielding. The transceiver has excellent immunity and reliability.
