### **1.3 Application**

- Desktop Type of PC & Workstation Use
- Display Terminals for Control System
- For TV Use
- Display for Exhibition Show & Advertisement

### **1.4 General Specification**

The followings are general specifications at the model HT260WXC-100.

Parameter	Specification	Unit	t Remarks
ctive area	575.77(H) × 323.71(V)	mm	
umber of pixels	1366(H) ×768(V)	pixel	S
ixel pitch	0.4215(H) ×0.4215(V)	mm	
ixel arrangement	RGB Vertical stripe		
isplay colors	16.2M	color	'S
isplay mode	Normally White		
imensional outline	$626(H) \times 373(V) \times 51.8(D)$ typ.	mm	
/eight	4150 (max.)	g	
urface Treatment	Haze 25%, 3H

## 2.0 ABSOLUTE MAXIMUM RATINGS

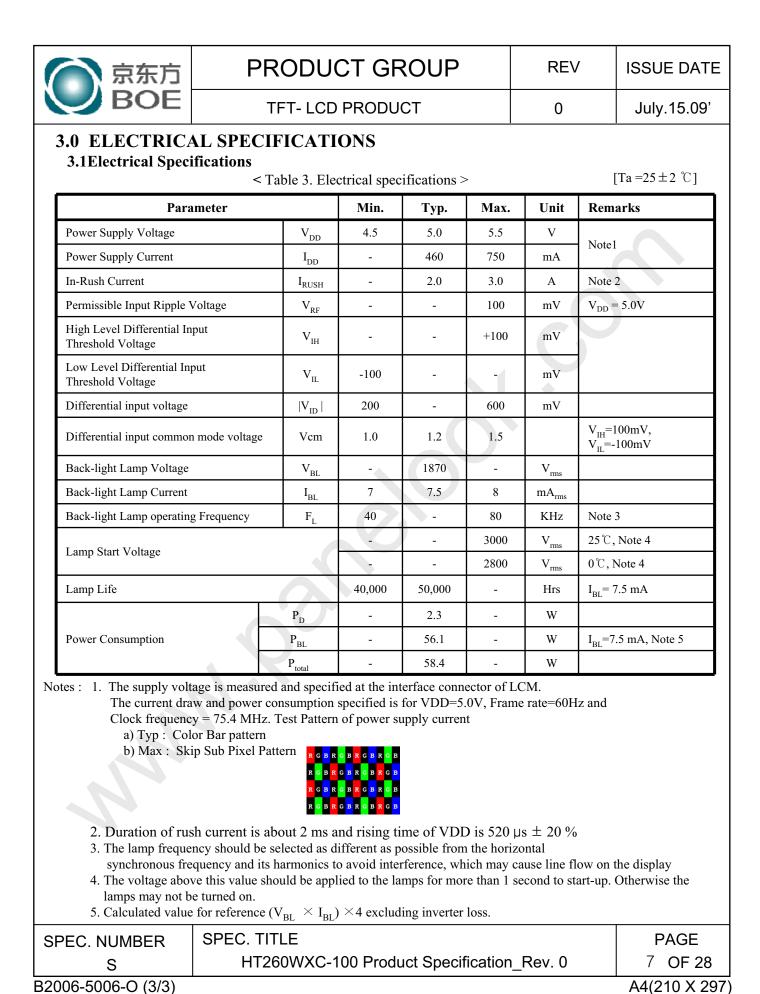

The followings are maximum values which, if exceed, may cause faulty operation or damage to the unit. The operational and non-operational maximum voltage and current values are listed in Table 2.

< Table 2. Absolute Maximum Ratings> [VSS=GN								
Parameter	Symbol	Min.	Max.	Unit	Remarks			
Power Supply Voltage	V <sub>DD</sub>	-0.3	6.0	V				
Logic Supply Voltage	V <sub>IN</sub>	VSS-0.3	V <sub>DD</sub> +0.3	V	Ta = 25 ℃			
Back-light Lamp Current	I <sub>BL</sub>	3	8.0	mA				
Back-light Lamp frequency	F <sub>L</sub>	40	80	kHz				
Operating Temperature	T <sub>OP</sub>	0	+50	°C	1)			
Storage Temperature	T <sub>ST</sub>	-20	+60	°C	1)			

Note : 1) Temperature and relative humidity range are shown in the figure below. Wet bulb temperature should be 39 <sup>o</sup>C max. and no condensation of water.

# 4.0 OPTICAL SPECIFICATION

#### 4.1 Overview

The test of Optical specifications shall be measured in a dark room (ambient luminance  $\leq 1$  lux and temperature = 25±2°C) with the equipment of Luminance meter system (Goniometer system and TOPCONE BM-5) and test unit shall be located at an approximate distance 50cm from the LCD surface at a viewing angle of  $\theta$  and  $\phi$  equal to 0°. We refer to  $\Theta_{\emptyset=0}$  (= $\Theta_3$ ) as the 3 o'clock direction (the "right"),  $\Theta_{\emptyset=90}$  (=  $\Theta_{12}$ ) as the 12 o'clock direction ("upward"),  $\Theta_{\emptyset=180}$  (=  $\Theta_9$ ) as the 9 o'clock direction ("left") and  $\Theta_{\emptyset=270}$  (=  $\Theta_6$ ) as the 6 o'clock direction ("bottom"). While scanning  $\Theta$  and/or  $\emptyset$ , the center of the measuring spot on the Display surface shall stay fixed. The measurement shall be executed after 30 minutes warm-up period. VDD shall be 5.0V +/-10% at 25°C. Optimum viewing angle direction is 6 'clock.
