

Features

- Complete UHF ASK transmitter
- Frequency range 300MHz to 450MHz
- Data rates higher than 10kbps
- Output Power up to 10dBm
- Low voltage operation - down to 2.0V
- Data tracking function for device wake-up
- Reference clock output
- 8-pin SOP/TSSOP packages

Applications

- Car alarm Remote control
- Wireless PIR
- Remote Power Switches
- Multi-Media Remote Control
- Remote Sensor Data Links
- Infrared Transmitter Replacement

General Description

The HT9831 is a highly integrated ASK transmitter IC for remote wireless applications in the 300 to 450MHz frequency band. This transmitter IC is a true "data-in, antenna-out" monolithic device making it very easy for users to implement a wireless system. It is only necessary to supply a crystal generated reference frequency, which is the RF carrier frequency divided by 32, and a few additional external parts to create a complete and versatile transmitter. The HT9831 is capable of delivering +9.5dBm into a 50Ω load. This power level is possible due to a small form factor transmitter (lossy antenna) which can operate near the maximum transmission regulation limit. The HT9831 utilises ASK/OOK - Amplitude Shift Keying/On-Off Keying- UHF receiver types from wide-band super-regenerative radios to narrow-band, high performance super-heterodyne receivers. The

HT9831 minimum ASK data rate is 10kbps which supports a more complicated control protocol.

To minimise power consumption, the HT9831 provides a data tracking function. In the Idle Mode, the internal PLL will be switched off, but when high to low data is received the PLL will be switched on and data will be transmitted without delay. The PLL will be turned off automatically and the HT9831 will return to the Idle Mode after no data input transients have been received for more than 300ms. As there is a reference clock output for the MCU, the MCU can use its internal RC clock rather than using an additional crystal for precise timing. With these combined features the HT9831 can provide a power-saving and cost effective solution for a huge range of remote wireless applications.

Pin Description

Pin No.	Pin Name	External Components	Description
1	XOUT	For 433.92MHz add 18pF capacitor For 315MHz add 15pF capacitor	Crystal Fs output
2	DIN		ASK data input
3	CREF	Output clock (Fs/65536) to MCU I/O 433.92MHz: Typ 207Hz 315MHz: Typ 150Hz	
4	EN	Pull high resistor	High: RF always on Low: DIN high trigger RF on
5	VDD	10 μ F decoupling capacitor	Power supply
6	PA_OUT	L/C matched circuit	Power amplifier output
7	VSS		Ground
8	XIN	For 433.92MHz add 18pF capacitor For 315MHz add 15pF capacitor	Crystal Fs input

Absolute Maximum Ratings

Operating Supply Voltage	$V_{DD}=2.0V\sim 3.6V$
Voltage on I/O Pins	$V_{SS}-0.3$ to $V_{DD}+0.3V$
Storage Temperature Range	$-50^{\circ}C$ to $+125^{\circ}C$
Lead Temperature (soldering, 10 seconds).....	$+300^{\circ}C$
ESD Rating	3kV
Ambient Operating Temperature (TA)	$-40^{\circ}C$ to $+85^{\circ}C$
Programmable Transmitter Frequency Ran.....	300MHz to 450MHz

Note: These are stress ratings only. Stresses exceeding the range specified under "Absolute Maximum Ratings" may cause substantial damage to the device. Functional operation of this device at other conditions beyond those listed in the specification is not implied and prolonged exposure to extreme conditions may affect device reliability.

Electrical Characteristics

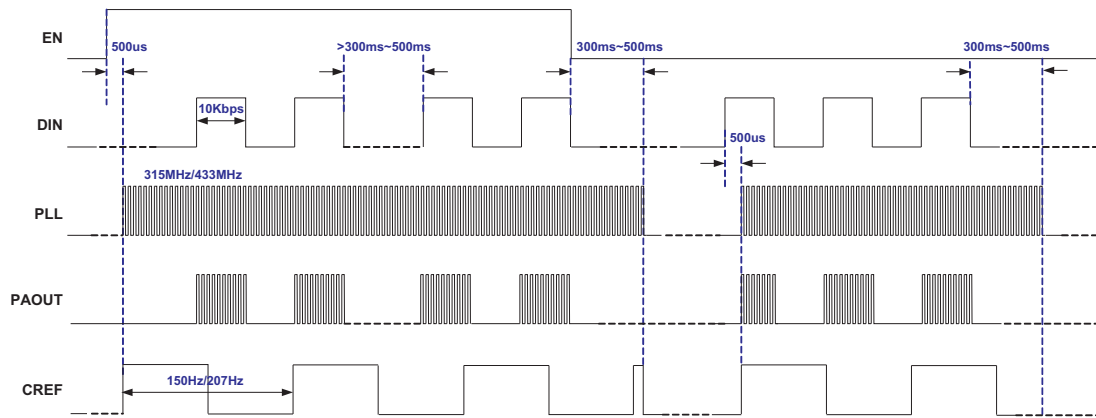

Ta = 25°C, Freq REFOSC=13.560MHz, EN=VDD. Bold values indicate -40°C to +85°C unless otherwise noted. 1kbps data rate 50% duty cycle. RL 50Ω load (matched)

Timing Diagram

Note: CREF output clock frequency is much lower than PLL output frequency. The figure shown above is just for presentation.

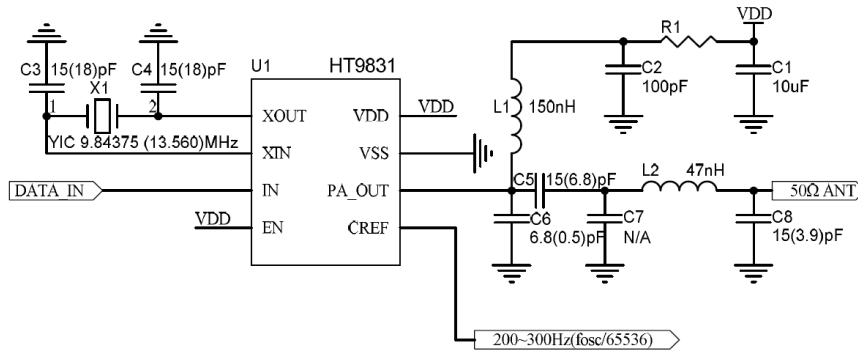

State table:

EN	DIN	PAOUT	CREF
0	0	0	0
0	1	300~450MHz	143~215Hz
1	0	0	143~215Hz
1	1	300~450MHz	143~215Hz

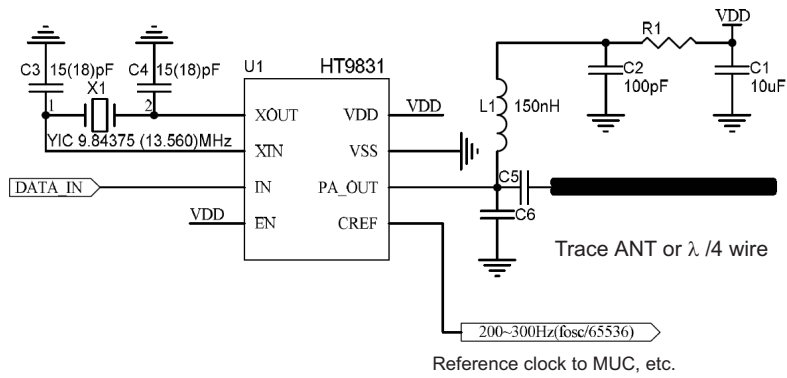

Note: PAOUT output frequency is $f_{OSC} \times 32$ and CREF output clock frequency is $f_{OSC} / 2^{16}$. For example: PAOUT output frequency is $13.56\text{MHz} \times 32 = 433.92\text{MHz}$ and CREF output clock frequency is $13.56\text{MHz} / 2^{16} \approx 207\text{Hz}$.
