

DESCRIPTION

The HY514400 is the new generation and fast dynamic RAM organized 1,048,576 x 4 bits. The HY514400 utilizes Hyundai's CMOS silicon gate process technology as well as advanced circuit techniques to provide wide operating margins to the users. Multiplexed address inputs permit the HY514400 to be packaged in a standard 20/26 pin plastic SOJ.

The package size provides high system bit densities and is compatible with widely available automated-test equipments. System oriented-feature includes single power supply of $5V \pm 10\%$ tolerance and direct interfacing capability with high performance logic families such as Schottky TTL.

FEATURES

- Low power dissipation
Max. CMOS standby 5.5mW
Max. TTL standby 11.0mW
Max. operating

Speed	Power
70	522.5mW
80	467.5mW
10	412.5mW

- Single power supply of $5V \pm 10\%$
- TTL compatible inputs and outputs
- Fast access Time

70	70ns	20ns	50ns
80	80ns	25ns	50ns
10	100ns	25ns	60ns

- Fast page mode operation
- Multi-bit test capability
- Read-Modify-Write capability
- CAS-before-RAS, RAS-only, Hidden refresh
- 1024 refresh cycles / 16ms

NOTE :

1. An initial pause of 200 μ s is required after power-up followed by 8 **RAS** cycles before proper device operation is achieved. In case of using internal refresh counter, a minimum of 8 **CAS**-before-**RAS** initialization cycles instead of 8 **RAS**-only refresh cycles are required. The device should be carefully initialized to be prevented from being entered into multi bit test mode during initialization.
2. AC measurements assume $t_t = 5$ ns.
3. $V_{IH}(\text{min.})$ and $V_{IL}(\text{max.})$ are reference levels for measuring timing of input signals. Also, transition times are measured between V_{IH} and V_{IL} .
4. Measured with a load equivalent to 2 TTL loads and 100pF.
5. $t_{OFF}(\text{max.})$ and t_{OEZ} define the time at which the output achieves the open circuit condition and is not referenced to output voltage levels.
6. Either t_{RCH} or t_{RRH} must be satisfied for a read cycle.
7. These parameters are referenced to **CAS** leading edge in early write cycles and to **WE** leading edge in Read-Modify-Write cycles.
8. **twcs**, **trwd**, **tcwd**, **tawd** and **tcpwd** are not restrictive operating parameters. They are included in the data sheet as electrical characteristics only. If $twcs \geq twcs(\text{min.})$, the cycle is an early write cycle and data out pin will remain open circuit (high impedance) through the entire cycle. If $trwd \geq trwd(\text{min.})$, $tcwd \geq tcwd(\text{min.})$, $tawd \geq tawd(\text{min.})$, and $tcpwd \geq tcpwd(\text{min.})$, the cycle is a Read-Modify-Write cycle and data out will contain data read from the selected cell. If neither of the above sets of conditions is satisfied, the condition of the data out (at access time) is indeterminated.
9. Operation within the $t_{RCD}(\text{max.})$ limit insures that $t_{RAC}(\text{max.})$ can be met. $t_{RCD}(\text{max.})$ is specified as a reference point only. If t_{RCD} is greater than the specified $t_{RCD}(\text{max.})$ limit, then access time is controlled by t_{CAC} .
10. Operation within the $t_{RAD}(\text{max.})$ limit insures that $t_{RAC}(\text{max.})$ can be met. $t_{RAD}(\text{max.})$ is specified as a reference point only. If t_{RAD} is greater than the specified $t_{RAD}(\text{max.})$ limit, then access time is controlled by t_{AA} .
11. These specifications are applied to the Test Mode.

CAPACITANCE

TEST MODE

The HY514400A is a DRAM organized 1,048,576 x 4-bit. It is internally organized 524,288 x 8-bit. In Test Mode, data are written into 8 sectors (Each is composed of 512K bits) in parallel and retrieved the same way. Column address A0 is not used. If, upon reading, all 8-bit data from 8 sectors are equal (all "1"s or "0"s), the DQ2 pin indicates a "1". If they are not equal, the DQ2 pin indicates a "0". The DQ0, DQ1 and DQ3 pins always indicate a "1" in Test Mode Read cycles. The diagram below shows the timing of the HY514400A to enter Test Mode. In Test Mode, the 1Mx4 DRAM can be tested as if it were a 512Kx4 DRAM. WE, CAS-before-RAS cycle (Test Mode In Cycle) puts the HY514400A into Test Mode. CAS-before-RAS or RAS-only refresh cycle puts it back into Normal Mode. In Test Mode, WE, CAS-before-RAS cycle shall be used for the refresh operation. The Test Mode function reduces test time.(1/2 in case of N test pattern)
