**Figure 2. CLKREQ# Control Timing****CLKREQ# - Assertion (transition from logic "1" to logic "0")**

The impact of asserting the CLKREQ# pin is that the SRCCLK output will become active per the timing found in Table 4. The clock will become active in a glitch free manner, providing a full cycle at the time it becomes active.

**CLKREQ# - De-Assertion (transition from logic "0" to logic "1")**

The impact of asserting the CLKREQ# pin is that the SRCCLK output will become inactive settling in the Tristate condition per the timing found in Table 4. The clock will become inactive in a glitch free manner.
