DESCRIPTION:

The IDT54/74AHCT374 are 8-bit registers built using advanced CEMOS™, a dual metal CMOS technology. This register consists of eight D-type flip-flops with a buffered common clock and buffered three-state output control. When the output enable ($\overline{OE}$) input is LOW, the eight outputs are enabled. When the $\overline{OE}$ input is HIGH, the outputs are in the three-state conditions.
Input data meeting the set-up and hold time requirements of the D inputs is transferred to the O outputs on the LOW-to-HIGH transition of the clock input.
