

IL700D

HIGH VOLTAGE HIGH-FREQUENCY STEP-UP SWITCHING REGULATOR-CONTROLLER

The IL700D is a monolithic high voltage switching regulator-controllers with PWM/PFM control that is specifically designed to operate from a rectified 220 VAC line source. This device contain a reference voltage source, oscillation circuit, error amplifier, phase compensation circuit, PWM control circuit, power supply 450 V MOS-transistor, 700 V DMOS power switch, and other components. Since the oscillation frequency is a high 600 kHz, with the addition of a small external component, the IC can function as switching regulator with high efficiency.

The IL700D provides low-ripple power, high-efficiency, and excellent transient characteristics thanks to a PWM control circuit capable of varying the duty ratio linearly from 0% to 82% and optimized error amplifier, and phase compensation circuit.

The IL700D contains a PWM/PFM switching control circuit so that it operates using PWM control with a duty ratio of 27% or higher and using PFM control with a duty ratio of lower than 27% to ensure high efficiency in all load ranges.

Pin No.	Pin Name	Function
1	NC	Not used
2	Vdd _{HV}	IC high power supply
3	NC	Not used
4	Vdd	IC internal low power supply
5	Vz	Voltage on zener diode
6	CVREF	Reference voltage source pass capacitor connection pin
7	GND	Gnd pin
8	FB	FB for external setting type
9	CSS	Soft-start capacitor connection pin
10	SENSE	Current limit detection pin
11	NC	Not used
12	NC	Not used
13	NC	Not used
14	NC	Not used
15	SOURCE	Power switch source
16	SOURCE	Power switch source
17	SOURCE	Power switch source
18	NC	Not used
19	NC	Not used
20	DRAIN	Power Switch Drain

1 **BELMICROSYSTEMS**

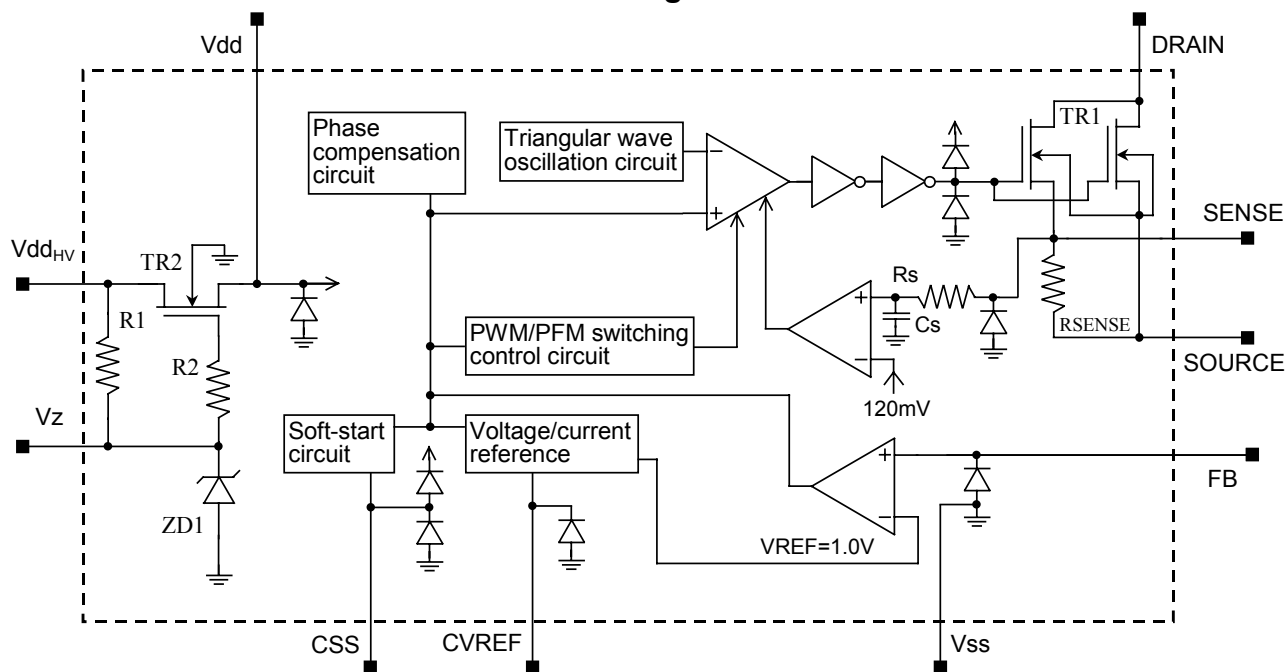

IL235Z

Features

- Operate from a rectified 220 VAC line source.
- Oscillation frequency: 600 kHz.
- Output voltage external setting (FB) type available.
FB terminal voltage (V_{FB}) 1.0 V.
- Minimum of external components. The only peripheral components that can be used with IC are a coil, a diode, capacitors, and a resistor.
- Built-in converter of high voltage in low voltage, using 450 V MOS-transistor and Zener diode.
- Built-in 700 V DMOS power switch.
- Duty ratio: 0% to 27% typ. PFM control
27% to 82% typ. PWM control
- Built-in current limiting circuit: Assigned by internal resistor (R_{SENSE}).
- Soft-start function: Can be set with an external capacitor (C_{SS}).
