

IM69D120

High performance digital XENSIV™ MEMS microphone

Description

The IM69D120 is designed for applications where low self-noise (high SNR), wide dynamic range, low distortions and a high acoustic overload point is required.

Infineon's Dual Backplate MEMS technology is based on a miniaturized symmetrical microphone design, similar as utilized in studio condenser microphones, and results in high linearity of the output signal within a dynamic range of 95dB. The microphone distortion does not exceed 1% even at sound pressure levels of 118dB SPL. The flat frequency response (28Hz low-frequency roll-off) and tight manufacturing tolerance result in close phase matching of the microphones, which is important for multi-microphone (array) applications.

With its low equivalent noise floor of 25dB SPL (SNR 69dB(A)) the microphone is no longer the limiting factor in the audio signal chain and enables higher performance of voice recognition algorithms.

The digital microphone ASIC contains an extremely low-noise preamplifier and a high-performance sigma-delta ADC. Different power modes can be selected in order to suit specific current consumption requirements.

Each IM69D120 microphone is calibrated with an advanced Infineon calibration algorithm, resulting in small sensitivity tolerances (± 1 dB). The phase response is tightly matched ($\pm 2^\circ$) between microphones, in order to support beamforming applications.

Features

- Dynamic range of 95dB
 - Signal to noise ratio of 69dB(A) SNR
 - <1% total harmonic distortions up to 118dB SPL
 - Acoustic overload point at 120dB SPL
- Sensitivity (± 1 dB) and phase ($\pm 2^\circ$ @1kHz) matched
- Flat frequency response with low frequency roll off at 28Hz
- Very fast analog to digital conversion speed (6 μ s latency @1kHz)
- Power optimized modes determined by PDM clock frequency
- Package dimensions: 4mm x 3mm x 1.2mm
- PDM output
- Omnidirectional pickup pattern

Typical applications

- Devices with Voice User Interface (VUI)
 - Smart speakers
 - Home automation
 - IOT devices
- Active Noise Cancellation (ANC) headphones and earphones
- High quality audio capturing
 - Conference systems
 - Cameras and camcorders
- Industrial or home monitoring with audio pattern detection

Use cases

Use cases

- Below 1% total harmonic distortion
 - Voice command during music from the loud speaker
 - Effective active noise cancellation even close to loud noise source
 - Recordings in a discotheque or at a rock concert
- High Signal to noise ratio
 - Far field audio signal pick-up
 - Low volume audio and whispered voice capturing
 - Microphone noise is no longer limiting the audio chain
- Sensitivity and phase matching
 - Full utilization of voice algorithms capability
 - Audio beam forming
 - High and precise attenuation of background noise
- Power optimized modes
 - Low current consumption for always on applications
 - Long operating time of battery powered devices

4 Typical stereo application circuit

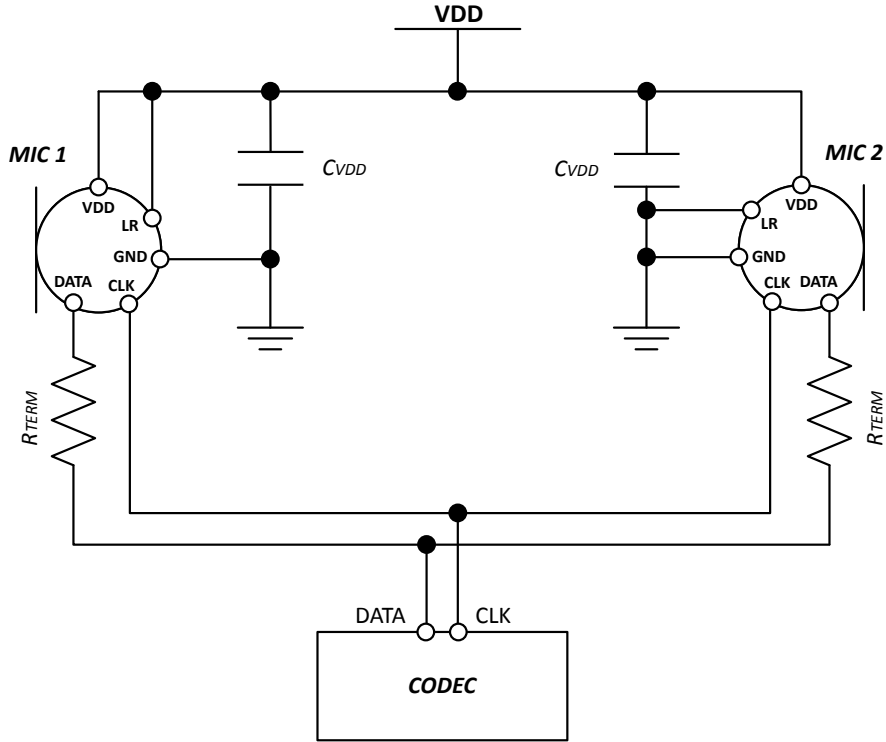

Figure 10 IM69D120 stereo mode configuration

Note: For best performance it is strongly recommended to place a 100nF ($C_{VDD_typical}$) capacitor between V_{DD} and ground. The capacitor should be placed as close to V_{DD} as possible. A termination resistor (R_{TERM}) of about 100Ω may be added to reduce the ringing and overshoot on the output signal.

Reliability specifications

5 Reliability specifications

The microphone sensitivity after stress must deviate by no more than 3dB from the initial value.

Footprint and stencil recommendation

7 Footprint and stencil recommendation

The acoustic port hole diameter in the PCB should be larger than the acoustic port hole diameter of the MEMS Microphone to ensure optimal performance. A PCB sound port size of radius 0.4 mm (diameter 0.8mm) is recommended.

The board pad and stencil aperture recommendations shown in **Figure 12** are based on Solder Mask Defined (SMD) pads. The specific design rules of the board manufacturer should be considered for individual design optimizations or adaptations.

Packing

8 Packing

For shipping and assembly the Infineon microphones are packed in product specific tape-and-reel carriers. A detailed drawing of the carrier can be seen in **Figure 13**
