

## TWS Bluetooth Earphone Charging Box SOC integrated with 500mA charger and 200mA discharger

### 1. Features

- **Discharge**
  - ◇ 200mA Synchronous Boost Conversion
  - ◇ Up to 95%@5V/200mA discharge efficiency of synchronous switch
  - ◇ Built-in power path management supports charging and discharging at the same time
- **Charge**
  - ◇ Max 500mA linear charger, charging current can be customized
  - ◇ Adjusts charging current automatically to adapt to different load capacity adapters
  - ◇ Supports 4.20V, 4.30V 4.35V, 4.40V batteries. Standard product 4.20V, other voltages need to be customized
- **Battery indicators**
  - ◇ Supports 4/2/1 LED battery indicator
- **Low-power dissipation**
  - ◇ Automatically detect earphone plugged-in/plugged-out/charger-end, Automatically enter standby mode
  - ◇ Standby power consumption up to 10uA minimum
- **Simplified BOM**
  - ◇ Built-in power MOS, only a few peripheral devices are needed in the complete charging and discharging scheme
- **Multiple protection, high reliability**
  - ◇ Output: over current and short circuit protection
  - ◇ Input: over voltage protection and Battery over charged protection
  - ◇ Over temperature protection

- ◇ Vin pin can withstand up to 12V(transient voltage)
- ◇ ESD 2KV

### 3. Description

IP5413T is a multi-functional power management SOC for total solution on TWS Bluetooth Earphone Charging Box. It integrates with 5V boost converter, lithium battery charging management and battery level indicators.

IP5413T is highly integrated with abundant functions, support boost with one single inductor, which makes the total solution with minimized-size and low-cost BOM.

The synchronous 5V-boost system of IP5413T provides rated 200mA output current with conversion efficiency up to 95%, can support low-cost inductors and capacitors.

IP5413T's linear charger supplies max 500mA charging current. With the change of IC temperature and input voltage, IP5413T can automatically adjust the charging current.

IP5413T can detect the TWS earphone plug-in/plug-out in the Charging Box independently. While the earphone is put in the Charging Box, it enters the discharging mode automatically. When the earphone is fully charged, the Charging Box automatically enters the sleep state, and the standby current can be reduced to 10uA.

IP5413T can support 4/2/1 LED battery indicator.

IP5413T is packaged with SOP8.

## 10. Function Description

### System Diagram

### Boost

IP5413T integrates a boost dc-dc converter with 5V/200mA output. To avoid large rush current causing device failure, it is built in overcurrent, short circuit, overvoltage and over temperature protection function, ensuring the reliability and stability of system operation. According to the IC temperature, IP5413T boost system can intelligently adjust output current, ensuring the IC temperature is below the set temperature.

Figure4 IP5413T Boost Efficiency Curve

## Charge

IP5413T integrates a linear lithium battery charger. When the battery voltage is less than 3V, precharge with  $20\text{mA} + I_{\text{set}} * 5\%$ . when the battery voltage is greater than 3V, enter constant current CC charging. when the battery voltage is close to 4.2V/4.3V/4.35V/4.4V, enter constant voltage charging.

IP5413T supports max 500mA linear charging, According to the IC temperature and input voltage, IP5413T can intelligently adjust charging current.

Figure6 IP5413T Power Path Diagram

## Battery level display

IP5413T has a built-in power algorithm, which can accurately display the remaining battery power according to the cell capacity.

IP5413T can support 1/2/4 LED battery indicator. And the 1/2/4 LED are not automatic identification, all need to be customized separately.

In the model name: "-1D" means 1 LED display application; "-2D" means 2 LED display application; "-4D" means 4 LED display application. If there is no "-1D", "-2D", "-4D" words in the model name, the default support 2 LED display application.

## KEY Function

IP5413T support single start, single close

Short press (pressed time in range of 60ms~2s): turn on the battery level display LED and BOOST output.

Long press (pressed time longer than 2s): No response

IP5413T can select the charging current by connecting different resistors on the KEY pin.

Only the “-ISET” model supports this function.

The recommended configuration of  $I_{CHG\_set}$  is as follows:

Recommended resistance value/ $\Omega$	$I_{chg}/mA$
22k	230
47k	330
68k	430

## plug-in/plug-out detection

Once detecting the insertion of the earphone, the IP5413T wakes up from the standby mode and turns on the boost 5V to charge the earphone, eliminating the button operation and supporting the buttonless mold solution. The IP5413T supports light-load auto standby function. When the earphone's load current on VOUT are less than 4mA for 8 seconds, IP5413T will automatically enter standby mode.

When the earphones are charged end, IP5413\_BT series will enter standby mode and the VOUT output will change to 2.4V.

When the earphones are charged end, IP5413\_CK series will enter standby mode and the VOUT output will change to 5V.

When the earphones are charged end, IP5413\_NAT series will enter standby mode and the VOUT output will change to 0V.
