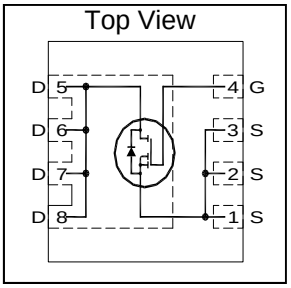
V_{DSS}	30	V
V_{GS} max	±20	V
$R_{DS(on)}$ max (@ V_{GS} = 10V)	6.6	mΩ
(@ V_{GS} = 4.5V)	9.9	
Qg (typical)	9.3	nC
I_D (@$T_{C\ (Bottom)}$ = 25°C)	25⑤	A

HEXFET® Power MOSFET



Applications

- Charge and Discharge Switch for Notebook PC Battery Application
- System/Load Switch
- Control MOSFET for synchronous buck converter

Features		Benefits
Low Thermal Resistance to PCB (<3.8°C/W)		Enable better Thermal Dissipation
Low Profile (<1.2mm)		Increased Power Density
Industry-Standard Pinout	results in	Multi-Vendor Compatibility
Compatible with Existing Surface Mount Techniques	⇒	Easier Manufacturing
RoHS Compliant, Halogen-Free		Environmentally Friendlier
MSL1, Consumer Qualification		Increased Reliability

Base part number	Package Type	Standard Pack		Orderable Part Number

Placement and Layout Guidelines

The typical application topology for this product is the synchronous buck converter. These converters operate at high frequencies (typically around 400 kHz). During turn-on and turn-off switching cycles, the high di/dt currents circulating in the parasitic elements of the circuit induce high voltage ringing which may exceed the device rating and lead to undesirable effects. One of the major contributors to the increase in parasitics is the PCB power circuit inductance.

This section introduces a simple guideline that mitigates the effect of these parasitics on the performance of the circuit and provides reliable operation of the devices.

To reduce high frequency switching noise and the effects of Electromagnetic Interference (EMI) when the control MOSFET (Q1) is turned on, the layout shown in Figure 19 is recommended. The input bypass capacitors, control MOSFET and output capacitors are placed in a tight loop to minimize parasitic inductance which in turn lowers the amplitude of the switch node ringing, and minimizes exposure of the MOSFETs to repetitive avalanche conditions.

When the synchronous MOSFET (Q2) is turned on, high average DC current flows through the path indicated in Figure 19. Therefore, the Q2 turn-on path should be laid out with a tight loop and wide traces at both ends of the inductor to minimize loop resistance.

Qualification Information†

Qualification Level	Consumer (per JEDEC JESD47F†† guidelines)	
Moisture Sensitivity Level	PQFN 3.3mm x 3.3mm	MSL1 (per JEDEC J-STD-020D††)
RoHS Compliant	Yes	

† Qualification standards can be found at International Rectifier's web site: http://www.irf.com/product-info/reliability

†† Applicable version of JEDEC standard at the time of product release.

Notes:

① Starting T_J = 25°C, L = 0.21mH, R_G = 50Ω, I_{AS} = 20A.

② Pulse width ≤ 400μs; duty cycle ≤ 2%.

③ R_θ is measured at T_J of approximately 90°C.

④ When mounted on 1 inch square PCB (FR-4). Please refer to AN-994 for more details: http://www.irf.com/technical-info/appnotes/an-994.pdf

⑤ Calculated continuous current based on maximum allowable junction temperature.

⑥ Current is limited to 25A by source bonding technology.

⑦ Pulse drain current is limited by source bonding technology.
