DESCRIPTION

The *ISSI* IS61C5128 is a very high-speed, low power, 524,288-word by 8-bit CMOS static RAM. The IS61C5128 is fabricated using *ISSI*'s high-performance CMOS technology. This highly reliable process coupled with innovative circuit design techniques, yields higher performance and low power consumption devices.

When $\overline{CE}$ is HIGH (deselected), the device assumes a standby mode at which the power dissipation can be reduced down with CMOS input levels.

The IS61C5128 operates from a single 5V power supply and all inputs are TTL-compatible.

The IS61C5128 is available in 36-pin 400-mil SOJ, and 44-pin TSOP (Type II) packages.

All signals must be in valid states to initiate a Write, but any one can go inactive to terminate the Write. The Data Input Setup and Hold timing are referenced to the rising or falling edge of the signal that terminates the Write.
4. Tested with $\overline{OE}$ HIGH.
