

ISL72991RH

Radiation Hardened Low Dropout Adjustable Negative Voltage Regulator

FN9054
Rev.6.00
Apr 14, 2017

The radiation hardened [ISL72991RH](#) is a low dropout adjustable negative regulator with an output voltage range of -2.25V to -26V. The device features a 1A output current capability, an adjustable current limit pin (ILIM), and a shutdown pin (SD) for easy on/off control.

The device incorporates unique circuitry that enables precision performance across the -55°C to +125°C temperature range and post-irradiation. Specifications across the full temperature range include an internal reference voltage of -1.25V +40mV/-50mV (maximum), line regulation of ±25mV (maximum), and load regulation of ±15mV (maximum). The reference voltage is the ADJ to GND voltage.

Constructed with the Intersil dielectrically isolated Rad Hard Silicon Gate (RSG) BiCMOS process, these devices are immune to single event latch-up and have been specifically designed to provide highly reliable performance in harsh radiation environments.

Applications

- Post switching power supplies
- DC/DC converters
- Motor controllers

Features

- Electrically screened to DLA SMD # [5962-02503](#)
- QML qualified per MIL-PRF-38535 requirements
- Latch-up immune DI process
- Wide input voltage range -3V to -30V
- Nominal output voltage range -2.25V to -26V
- Line regulation. ±25mV (maximum)
- Load regulation ±12mV (typ); ±15mV (maximum)
- Dropout voltage (100mA) 0.2V (typ); 0.3V (maximum)
- Dropout voltage (1A) 1V (maximum)
- Minimum load current. 3.0mA
- TTL input-level shutdown (SD); low = on
- Operating temperature range. -55°C to +125°C
- Radiation environment
 - SEL/SEB LET_{TH} (V_S = -30V) 86.4MeV • cm²/mg
 - Total dose, high dose rate 300krad(Si)

N/A	ISL72991RHEVAL2Z (Note 4)	Evaluation Board		

NOTES:

- These Intersil Pb-free Hermetic packaged products employ 100% Au plate - e4 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations.
- Specifications for Rad Hard QML devices are controlled by the Defense Logistics Agency Land and Maritime (DLA). The SMD numbers listed must be used when ordering.
- The /PROTO and /SAMPLE are not rated or certified for Total Ionizing Dose (TID) or Single Event Effect (SEE) immunity. These parts are intended for engineering evaluation purposes only. The /PROTO parts meet the electrical limits and conditions across the temperature range specified in the DLA SMD and are in the same form and fit as the qualified device. The /SAMPLE die is capable of meeting the electrical limits and conditions specified in the DLA SMD at +25°C only. The /SAMPLE is a die and does not receive 100% screening across the temperature range to the DLA SMD electrical limits. These part types do not come with a certificate of conformance because there is no radiation assurance testing and they are not DLA qualified devices.
- Evaluation board uses the /PROTO parts. The /PROTO parts are not rated or certified for Total Ionizing Dose (TID) or Single Event Effect (SEE) immunity.

Typical Application

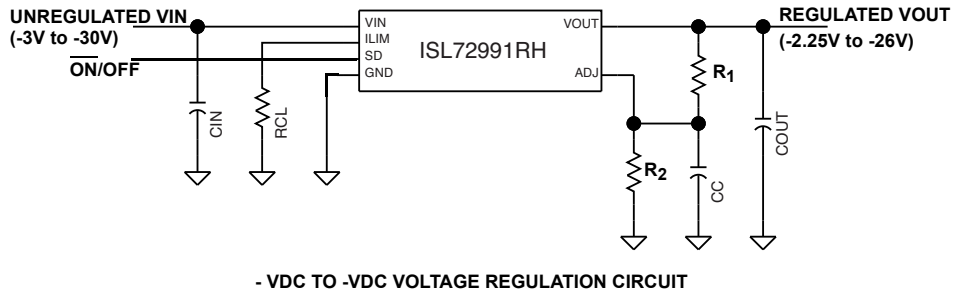

FIGURE 4. TYPICAL APPLICATION

Absolute Maximum Ratings

Minimum Supply Voltage	-35V
Minimum Supply Voltage (Note 7)	-30V
Minimum Output Current	3mA
Output Short-Circuit Duration. Thermal Protection	Indefinite
ESD Rating	
Human Body Model (HBM) (Tested per MIL-PRF-883 3015.7)	3kV
Machine Model (MM) (Tested per EIA/JESD22-A115-A)	300V
Charged Device Model (CDM) (Tested per JESD22-C101D)	1kV

Thermal Information

Thermal Resistance (Typical)	θ_{JA} (°C/W)	θ_{JC} (°C/W)
28 Ld Flatpack (Notes 5, 6)	60	5
Maximum Storage Temperature Range	-65°C to +150°C	
Maximum Junction Temperature (T _{JMAX})	+150°C	

Recommended Operating Conditions

Ambient Operating Temperature Range	-55°C to +125°C
Maximum Operating Junction Temperature	+150°C
Supply Voltage	-3V to -30V

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

NOTES:

- θ_{JA} is measured with the component mounted on a low-effective thermal conductivity test board in free air. See tech brief [TB379](#) for details.
- For θ_{JC} , the "case temp" location is the center of the package underside.
- The minimum supply limit specified is for operation in a heavy ion environment at an LET = 86.4MeV • cm²/mg.

Electrical Specifications $V_O \leq V_{IN} - 1.5V$, $I_O = 100mA$, $C_O = 47\mu F$, $SD = 0V$, $T_A = +25^\circ C$, unless otherwise noted. **Boldface limits apply across the operating temperature range, -55°C to +125°C.**

Functional Description

Functional Overview

The radiation hardened ISL72991RH is a low dropout adjustable negative regulator with an output voltage range of -2.25V to -26V. The device features a 1A output current capability, an adjustable current limit pin (ILIM), and a shutdown pin (SD) for easy on/off control. The part is constructed using the Intersil dielectrically isolated, complimentary bipolar RSG process. It is immune to single-event latch-up and has been specifically designed to provide reliable performance in harsh radiation environments.

Application Information

Output Voltage Programming

The output voltage of the regulator can be programmed with two external resistors and is described by [Equation 1](#):

$$V_{OUT} = -1.25(1 + R_1/R_2) - (I_{ADJ} \times R_1) \quad (\text{EQ. 1})$$

Output Current Limit Programming

The output current limit threshold of the regulator is set with a single external resistor (R_{CL}) connected from I_{LIM} to ground.

The effective current limit at any single R_{CL} value is influenced by the V_{IN} to V_{OUT} difference, temperature, and V_{IN} amplitude. [Figures 22](#) through [24](#) illustrate these effects.

[Figure 22](#) shows that for a given V_{OUT} (-5V) and temperature (+25°C) the effect of V_{IN} to V_{OUT} differential on the current limit level is significant.

[Figure 23](#) shows the effect of temperature at a single V_{IN} to V_{OUT} voltage condition across the R_{CL} range of 2.1kΩ to 10kΩ.

[Figure 24](#) shows that for a given differential voltage (V_{IN} to V_{OUT}) and temperature, the effect of V_{IN} amplitude is less significant than seen in [Figure 22](#).

Because of these numerous variables, there is no one formula relating R_{CL} to I_{CL} that will suffice for the range of likely possible conditions. [Figures 10](#) through [13](#) on [page 8](#) provide guidance in setting the R_{CL} value for a limited number of possible conditions. Users are advised to evaluate their specific condition for satisfactory performance.

Capacitor Selection

An input capacitor is required if the regulator is located more than 6 inches from the power supply filter capacitors. A 10μF solid tantalum capacitor is recommended.

An output capacitor of at least 10μF must be used to ensure stability of the regulator. Additional capacitance may be added as required to improve the dynamic response of the regulator. Solid tantalum or ceramic capacitors are recommended.

Loop Compensation

The output capacitor and ESR comprise a zero in the loop transfer function that must be compensated with a pole to ensure loop stability in accordance with [Equation 2](#):

$$C_C \times R_1 = C_{OUT} \times \text{ESR} \quad (\text{EQ. 2})$$

The compensating capacitor should be a low ESR ceramic type.

Layout Guidelines

The stability of the regulator is sensitive to layout. It is strongly recommended that a continuous copper ground plane (1oz. or greater) be used. In addition, component lead lengths and interconnects should be minimized, but should not exceed 1/2 inch. Finally, the return lead of the compensation capacitor (C_C) should be connected as close as possible to the GND pin of the IC.

DATE	REVISION	CHANGE
Apr 14, 2017	FN9054.6	Added Notes 3 and 4 on page 2. Added Table 1 on page 12.
Aug 17, 2016	FN9054.5	Updated Equation 2 Loop Compensation equation to change R2 to R ₁ .
May 7, 2015	FN9054.4	Replaced Figures 10, 11, 12 and 13 on page 8. Replaced Figures 22, 23 and 24 on page 10. Updated Equation 1 on page 10: from $V_{OUT} = -1.25(1+R_2/R_1) - (I_{ADJ} \times R_2)$ to $V_{OUT} = -1.25(1+R_1/R_2) - (I_{ADJ} \times R_1)$.
Jan 29, 2015	FN9054.3	"Typical Performance Curves" on page 8: Added Figures 18 and 19.
Mar 26, 2014	FN9054.2	Added Related Literature on page 1. Added significant relevant content throughout the document, expanding from 3 to 12 pages.
Jun, 28, 2004	FN9054.1	Updated file.
Jul 9, 2001	FN9054.0	Initial Release.

About Intersil

Intersil Corporation is a leading provider of innovative power management and precision analog solutions. The company's products address some of the largest markets within the industrial and infrastructure, mobile computing and high-end consumer markets.

For the most updated datasheet, application notes, related documentation and related parts, please see the respective product information page found at www.intersil.com.

For a listing of definitions and abbreviations of common terms used in our documents, visit www.intersil.com/glossary.

You can report errors or suggestions for improving this datasheet by visiting www.intersil.com/ask.

Reliability reports are also available from our website at www.intersil.com/support.

NOTES:

1. Index area: A notch or a pin one identification mark shall be located adjacent to pin one and shall be located within the shaded area shown. The manufacturer's identification shall not be used as a pin one identification mark. Alternately, a tab (dimension k) may be used to identify pin one.
2. If a pin one identification mark is used in addition to a tab, the limits of dimension k do not apply.
3. This dimension allows for off-center lid, meniscus, and glass overrun.
4. Dimensions b1 and c1 apply to lead base metal only. Dimension M applies to lead plating and finish thickness. The maximum limits of lead dimensions b and c or M shall be measured at the centroid of the finished lead surfaces, when solder dip or tin plate lead finish is applied.
5. N is the maximum number of terminal positions.
6. Measure dimension S1 at all four corners.
7. For bottom-brazed lead packages, no organic or polymeric materials shall be molded to the bottom of the package to cover the leads.
8. Dimension Q shall be measured at the point of exit (beyond the meniscus) of the lead from the body. Dimension Q minimum shall be reduced by 0.0015 inch (0.038mm) maximum when solder dip lead finish is applied.
9. Dimensioning and tolerancing per ANSI Y14.5M - 1982.
10. Controlling dimension: INCH.

For the most recent package outline drawing, see [K28.A](#).
