## Radiation Hardened Power MOSFET Surface Mount (SMD-0.5e Ceramic Lid) 60V, 40A, N-channel, R9 Superjunction Technology

### Features

- Low  $R_{DS(on)}$
- Fast switching
- Single event effect (SEE) hardened
- Low total gate charge
- Simple drive requirements
- Hermetically sealed
- Ceramic package
- Light weight
- Surface mount
- ESD rating: class 2 per MIL-STD-750, Method 1020

### Potential Applications

- DC-DC converter
- Motor drives
- Electric propulsion

### Product Validation

Qualified according to MIL-PRF-19500 for space applications

### Description

IR HiRel R9 technology provides superior power MOSFETs for space applications. These devices have improved immunity to Single Event Effect (SEE) and have been characterized for useful performance with Linear Energy Transfer (LET) up to 88.6 MeV·cm<sup>2</sup>/mg. Their combination of low  $R_{DS(on)}$  and faster switching times reduces the power losses and increases power density in today's high speed switching applications such as DC-DC converters and motor controllers. These devices retain all of the well-established advantages of MOSFETs such as voltage control, fast switching and temperature stability of electrical parameters.

**2.4 Radiation Characteristics**

IR HiRel radiation hardened MOSFETs are tested to verify their radiation hardness capability. The hardness assurance program at IR HiRel is comprised of two radiation environments. Every manufacturing lot is tested for total ionizing dose (per notes 3 and 4) using the TO-3 package. Both pre- and post-irradiation performance are tested and specified using the same drive circuitry and test conditions in order to provide a direct comparison.
