DESCRIPTION

The JGX-1505F offer 3-32VDC input control,with outputs rated at 10,15,20,25 or 40Amps. All models include an internal snubber. The relays provide 4000Vrms opto-isolation, between input and output. Encapsulation,thermally conductive epoxy.

INSTALLATION

1. When mounting the relays side by side, provide a space equivalent to the width of a single SSR between two adjacent SSRs. Otherwise, reduce the load current flow to 1/2 to 1/3 of the rated current.
2. When mounting relays on heat sink surface, first apply a heat conductive grease to the metal back surface of the SSR. Press the SSR firmly onto the heat sink to ensure a good seal. Screw the SSR down to the heat sink.
3. Next, wire the screw terminals and securely tighten the screws.

PRECAUTIONS

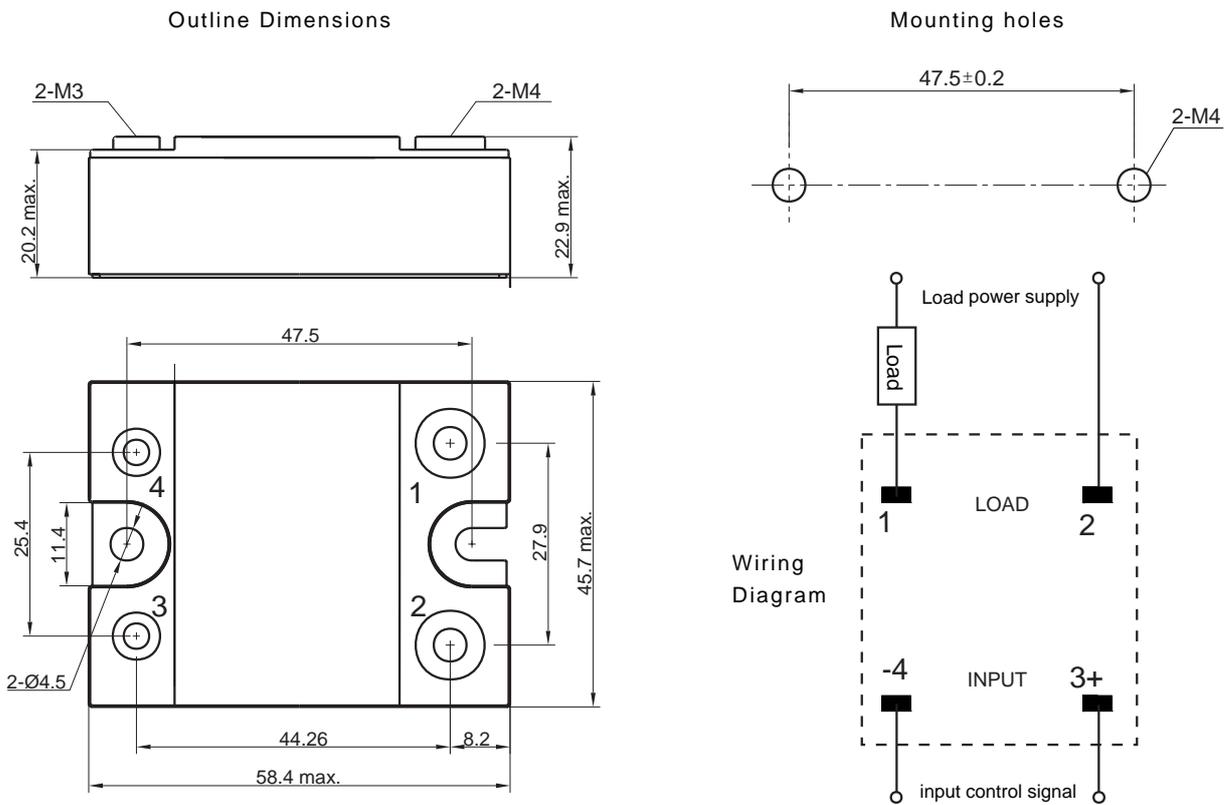

1. Before connecting a load that generates a high surge current, such as a lamp load to the SSR, make sure that the SSR can withstand the surge current of the load.
2. The product data sheet shows the non-repetitive peak value of the surge current that flows through the SSR. Normally, use 1/2 of the non-repetitive peak surge current as the standard value. If a surge current exceeding that value is expected, connect a quick-blowing fuse to protect the SSR.
