

### DESCRIPTION

JW3313S is a low-power battery protection IC for the 3 series rechargeable lithium-ion battery pack.

JW3313S integrates high-accuracy voltage detection, which realizes multiple protect functions including over-charge, over-discharge, over-current, and open wire detection.

*Company's Logo is Protected, "JW" and "JOULWATT" are Registered Trademarks of JoulWatt Technology Co., Ltd..*

### FEATURES

- Input Voltage up to 30V
- High-accuracy Voltage Detection for Each Cell
  - Over-charge Detection Voltage  $V_{OC}$ : 3.65V, 3.85V, 4.2~4.375V (25mV step)  $\pm 25mV$  (25°C)
  - Over-charge Release Hysteresis  $V_{OCRH}$ : 0.1~0.4V (100mV step)
  - Over-discharge Detection Voltage  $V_{OD}$ : 2.0V, 2.3V, 2.5V, 2.7V  $\pm 80mV$  (25°C)
  - Over-discharge Release Hysteresis  $V_{ODRH}$ : 0.3~0.7V (200mV step)
- Discharge Over-current Detection in 3-step:

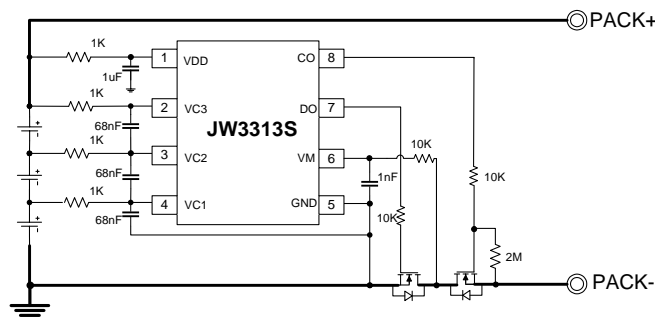

- 1<sup>st</sup>Detection Voltage  $V_{DO11}$ : 50~150mV (25mV step)  $\pm 10mV$
- 2<sup>nd</sup>Detection Voltage  $V_{DO12}$ :  $2V_{DO11} \pm 20mV$
- Short Circuit Detection Voltage  $V_{SHT}$ : 0.4V  $\pm 50mV$
- Charge Over-current Detection Voltage  $V_{COI}$ :
  - -20mV  $\pm 5mV$
  - -30mV  $\pm 10mV$ , -50mV  $\pm 10mV$ ,
  - Disable
- 3-step Discharge Over-current Protection
  - For 1<sup>st</sup>,  $t_{DO11}$  : 0.2s, 0.5s, 1s, 2s
  - For 2<sup>nd</sup>,  $t_{DO12}$  :  $t_{DO11} \times 10\%$
  - For 3<sup>rd</sup>,  $t_{SHT}$  : 300 $\mu$ s
- Open Wire Detection
- Wide Range of Operation Temperature -40°C to +85°C
- Low Current Consumption (T=25°C)
 

Full Power Mode	10 $\mu$ A typ.
Sleep Mode	1.5 $\mu$ A typ.
Shutdown Mode	350nA typ.
- Package: SOP8

### APPLICATIONS

- Rechargeable Lithium-ion Battery Pack
- Power Tools, Garden Tool

### TYPICAL APPLICATION

## Selection Guides

### Production Name Structure

JW3313S-XX

Series code<sup>1)</sup>

Sequentially set from AA to ZZ

**Notes:**

1) Relates to different detection threshold voltage

### Products Series List<sup>2)</sup>

Part NO.	Charger Lock after over-charge or charge over-current <sup>3)</sup>	Over -charge detection voltage [Voc]	Over -charge release voltage [Vocl]	Over -discharge detection voltage [Vod]	Over -discharge release voltage [Vodh]
JW3313S-MC	N	4.250V	4.05V	2.7V	3.0V
JW3313S-MB	N	4.225V	4.025V	2.7V	3.0V
JW3313S-MD	N	4.250V	4.15V	2.7V	3.0V
JW3313S-MG	N	4.250V	4.05V	2.7V	3.0V

Part NO.	Charge over-current detection voltage [Vco]	Discharge over-current 1 detection voltage [Vdoi1]	Discharge over-current 2 detection voltage [Vdoi2]	Short circuit detection voltage [Vsh]	Discharge over current 1 detection delay time [tdoi1]
JW3313S-MC	50mV	100mV	200mV	400mV	1s
JW3313S-MB	20mV	100mV	200mV	400mV	1s
JW3313S-MD	20mV	50mV	100mV	400mV	200ms
JW3313S-MG	disable	150mV	300mV	400mV	1s

**Notes:**

2) Please contact our sales office for products with detection voltage values other than those specified above.

3) If charger lock is disabled, the charge over current fault can be self-released with charger exiting.

If charger lock is disabled, the over-charge fault can be released when the battery voltage meets the recovery threshold without charger detection.

**Notes :**

- 1) Exceeding these ratings may damage the device. These stress ratings do not imply function operation of the device at any other conditions beyond those indicated under RECOMMENDED OPERATING CONDITIONS.
- 2) The JW3313S includes thermal protection that is intended to protect the device in overload conditions. Continuous operation over the specified absolute maximum operating junction temperature may damage the device.
- 3) The device is not guaranteed to function outside of its operating conditions.
- 4) Measured on JESD51-7, 4-layer PCB.

**PIN DESCRIPTION**

Pin No.	Name	Description
1	VDD	Input pin for positive power supply.
2	VC3	Connection pin for battery 3's positive voltage.
3	VC2	Connection pin for battery 2's positive voltage.
4	VC1	Connection pin for battery 1's positive voltage.
5	GND	Input pin for negative power supply.
6	VM	This is a dual-purpose pin: 1) Pin for charge and discharge current sensing. 2) Pin for load and charger detection.
7	DO	Gate connection pin for discharge control MOSFET.
8	CO	This is a dual-purpose pin: 1) Gate connection pin for charge control MOSFET; 2) Pin for charger detection.

BLOCK DIAGRAM

**FUNCTIONAL DESCRIPTION**

**Power on Reset**

Battery cells can be connected in any order, but it is recommended that the GND and VDD pins are connected first, and then connection continues from lower to higher voltage cells.

When the battery is connected to JW3313S, V<sub>DD</sub> rises up. If V<sub>DD</sub><V<sub>POR</sub>, all circuits power down and both charge and discharge MOSFETs turn off. When V<sub>DD</sub>>V<sub>POR</sub>, JW3313S enters initial status.

**Normal Status**

In the JW3313S, both CO and DO pins output high level voltage when all battery voltages are between V<sub>OD</sub> and V<sub>OC</sub>, the battery temperature is between V<sub>COT</sub> and V<sub>CUT</sub>, and the CS pin's voltage is between V<sub>COI</sub> and V<sub>DOI1</sub>. This is the normal status. At this time, the charge and discharge MOSFETs are on.

**Over-Charge Status**

JW3313S detects cell voltage once per t<sub>DETV</sub>. When any battery voltage increases to V<sub>OC</sub> or higher for longer than t<sub>OC</sub>, the CO pin outputs “High\_Z”. Since the CO pin pulled down to the PACK- voltage by an external resistor, the charge MOSFET is turned off to stop charging. This is the over-charge status.

The over-charge status is released if the CO pin voltage is higher than V<sub>CHA</sub> (optional by part number) and either of the conditions mentioned below is satisfied:

- (1) All battery voltage drops to V<sub>OCL</sub> or lower for longer than t<sub>OCL</sub>.
- (2) When the CS pin voltage is higher than V<sub>TH\_DSG</sub> during discharging and all battery voltage drops to V<sub>OC</sub> or lower for longer

than 400μs.

- (3) When the CS pin voltage is higher than V<sub>DOI1</sub> during discharging and all battery voltage drops to V<sub>OC</sub> or lower for longer than 60μs.

**Over-Discharge Status**

JW3313S detects cell voltage once per T<sub>DETV</sub>. When any voltage of the batteries decreases to V<sub>OD</sub> or lower for longer than t<sub>OD</sub>, the DO pin outputs low level voltage. The discharge MOSFET is turned off and it stops discharging. This is the over-discharge status.

The over-discharge status is released if either condition mentioned below is satisfied:

- (1) The VM pin voltage is lower than V<sub>VMTH</sub>, and all battery voltages increase to V<sub>ODH</sub> or higher for longer than t<sub>ODH</sub>.
- (2) The VM pin voltage is lower than V<sub>CHA</sub>, and all battery voltages increase to V<sub>OD</sub> or higher for longer than t<sub>ODH</sub>.

**Sleep Status**

If JW3313S is in over-discharge status, and the sleep timer overflow, the JW3313S enters sleep status. At sleep status, the discharge MOSFET is turned off and the charge MOSFET is turned on. The total current consumption is 1.5μA in sleep status.

The sleep status is released if the following condition is satisfied:

The VM pin voltage is lower than V<sub>CHA</sub> for longer than t<sub>SLPR</sub>.

**Discharge Over-Current Status**

In the JW3313S, if the VM pin voltage increases to the level of V<sub>DOI</sub> or more for longer than t<sub>DOI</sub>,

the DO pin outputs low level voltage. The discharge MOSFET is turned off and it stops discharging. This is the discharge over-current status.

The VM pin is pulled down to the GND level via  $R_{VMDN}$  internally.

JW3313S has three thresholds for discharge over-current detection ( $V_{DO11}$ ,  $V_{DO12}$ ,  $V_{SHT}$ ).

The discharge over-current status is released if the following condition is satisfied:

The VM pin voltage is lower than  $V_{VMTH}$  for longer than  $t_{DOIR}$ .

**Charge Over-Current Status**

In the JW3313S, if the VM pin voltage decreases to the level of  $V_{COI}$  or lower for longer than  $t_{COI}$ , the CO pin outputs “High\_Z” and the DO pin outputs low level voltage. The charge and discharge MOSFETs are turned off. This is the charge over-current status. If charger lock is disabled, the charge over-current is released without remove the charger.

The charge over-current is released if the following condition is satisfied or self-released, that is optional through different part number:

The CO pin voltage is higher than  $V_{CHA}$  for longer than  $t_{COIR}$ .

**Open Wire Detection**

JW3313S integrates open wire detection and protection. When any of VC3 to VC1 pin is open, it detects open wire, charging and discharging are prohibited after a delay time.

**Test Mode**

When DO pin voltage is a  $V_{ENTRY}$  higher than VDD pin voltage for longer than  $t_{ENTRY}$ , the JW3313S is in test mode. In this mode the delay time of all protection including over-charge,

over-discharge and over-current is shortened, see Table 1 for the details. The chip can be quickly tested by the user in this mode. After  $t_{EXIT}$  delay, JW3313S exits test mode.

Mode	$t_{OC(max)}$	$t_{OD(max)}$	$t_{COI(max)}$	$t_{DO11(max)}$
Normal	1.95s	1.95s	10ms	$t_{DO11}$
Test	10ms	10ms	600 $\mu$ s	1.5ms

Mode	$t_{DO12(max)}$	$t_{OT(max)}$	$t_{SLP(max)}$	
Normal	$t_{DO12}$	5s	10s	
Test	1ms	12ms	2ms	

Table 1 The Delay Time of Different Mode

**Package and Bag Caution**

- JW3313S is MSD (Moisture-Sensitive Devices) and its MSL<sup>6)</sup> (Moisture-Sensitive Level) is level-3.
- Calculated shelf life in sealed bag is 12 months at <40 °C and <90%RH(Relative Humidity).
- Peak package body temperature<sup>1)</sup> is 260°C.
- After bag is opened, devices that will be subjected to reflow solder or other high temperature process must
  - Mounted within 168 hours of factory at the condition  $\leq 30^{\circ}C/60\%RH$ .
  - Stored at <10%RH.
- Devices require bake before mounting if Humidity Indicator Car(HIC) is >10%RH when read at  $23 \pm 5^{\circ}C$ .
- If baking is required, devices may be baked for 48 hours at  $125 \pm 5^{\circ}C$ . If device containers cannot be subjected to high temperature for shorter bake times are desired, reference IPC/JEDEC J-STD-033 for bake procedure.

**Note:** 6) Level and body temperature defined by IPC/JEDEC J-STD-020.

**TAPE AND REEL INFORMATION**

Carrier Tape

UNIT: mm

Note:

- 1)The carrier type is black, and colorless transparent.
- 2)Carrier camber is within 1mm in 100mm.
- 3)10 pocket hole pitch cumulative tolerance:±0.20.
- 4)All dimensions are in mm.
