# Warning

- 1. This Kyocera LCD module has been specifically designed for use only in electronic devices and industrial machines in the area of audio control, office automation, industrial control home appliances, etc. The module should not be used in applications where the highest level of safety and reliability are required and module failure or malfunction of such module results in physical harm or loss of life, as well as enormous damage or loss. Such fields of applications include, without limitation, medical, aerospace, communications infrastructure, atomic energy control. Kyocera expressly disclaims any and all liability resulting in any way to the use of the module in such applications.
- 2. Customer agrees to indemnity, defend and hold Kyocera harmless from and against any and all actions, claims, damages, liabilities, awards, costs, and expenses, including legal expenses, resulting from or arising out of Customer's use, or sale for use, or Kyocera modules in applications.

# Caution

1. Kyocera shall have the right, which Customer hereby acknowledges, to immediately scrap or destroy tooling for Kyocera modules for which no purchase Orders have been received from the Customer in a two-year period.

## 1. Application

This document defines the specification of KCG057QVLDJ-G000. (RoHS Compliant)

## 2. Construction and outline

LCD	: Transmissive color dot matrix type STN
Duty ratio	: 1/240 duty
Backlight system	: LED
Polarizer	: Glare treatment
Additional circuit	: Bias voltage circuit, Randomizing circuit,
	DC/DC converter circuit, Temperature compensation circuit
Touch panel	: Analog type, Non-Glare treatment
	DC/DC converter circuit, Temperature compensation circuit

#### 3. Mechanical specifications

Item	Specification	Unit
Outline dimensions	144 (W)× (104.8) (H) × 14.5 (D)	mm
Active area	115.18 (W) × 86.38 (H) (14.4cm / 5.7 inch (Diagonal))	mm
Effective viewing area	$117.2 \text{ (W)} \times 88.4 \text{ (H)}$	mm
Dot format	$320 \times (R,G,B) (W) \times 240 (H)$	$\operatorname{dot}$
Dot size	$0.10 \text{ (W)} \times 0.34 \text{ (H)}$	mm
Dot pitch	$0.12 (W) \times 0.36 (H)$	mm
Base color *1	Normally Black	-
Mass	220	g

#### 3-1. Mechanical specifications of LCD

\*1 Due to the characteristics of the LCD material, the color varies with environmental temperature.

#### 3-2. Mechanical specifications of touch panel

Item	Specification	Unit
Input	Radius-0.8 stylus or Finger	-
Actuation force	0.5±0.3	Ν
Transmittance	Тур. 80	%
Surface hardness	Pencil hardness 2H or more according	-

## 4. Absolute maximum ratings

4-1. Electrical absolute maximum ratings

Item	Symbol	Min.	Max.	Unit
Supply voltage for logic	V <sub>DD</sub>	0	6.0	V
Supply voltage for LCD driving	VCONT	0	$V_{DD}$	V
Input signal voltage *1	VIN	0	V <sub>DD</sub>	V
FRM frequency	$\mathbf{f}_{\mathrm{FRM}}$	-	150	Hz
LED forward current *2	IF	-	27	mA
Reversed voltage *2	VR	-	5	V
Supply voltage for touch panel	V <sub>TP</sub>	0	6.0	V
Input current of touch panel	$\mathrm{I}_{\mathrm{TP}}$	0	0.5	mA

\*1 Input signal : FRM, LOAD, CP, DISP, D0 ~ D7

\*2 For each "AN1-CA1", "AN2-CA2" and "AN3-CA3"

## 4-2. Environmental absolute maximum ratings

Item		Symbol	Min.	Max.	Unit
Operating temperature	*1	T <sub>OP</sub>	0	60	°C
Storage temperature	*2	Тято	-20	60	°C
Operating humidity	*3	Hop	10	*4	%RH
Storage humidity	*3	$H_{\rm STO}$	10	*4	%RH
Vibration		-	*5	*5	-
Shock		-	*6	*6	-

\*1 Operating temperature means a temperature which operation shall be guaranteed. Since display performance is evaluated at 25°C, another temperature range should be confirmed.

```
*2 Temp. = -20°C < 48h, Temp. = 60°C < 168h
```

Store LCD panels at normal temperature/humidity. Keep them free from vibration and shock. An LCD panel that is kept at a low or a high temperature for a long time can be defective due to other conditions, even if the low or high temperature satisfies the standard.

(Please refer to "Precautions for use" for details.)

\*3 Non-condensing

\*4 Temp. 40°C, 85%RH Max.

Temp. > 40°C, Absolute humidity shall be less than 85%RH at 40°C.

\*5

Frequency	$10 \thicksim 55 \ \mathrm{Hz}$	Acceleration value
Vibration width	0.15mm	$(0.3 \sim 9 \text{ m/s}^2)$
Interval	10-55-10	Hz 1 minutes

2 hours in each direction X, Y, Z (6 hours total) EIAJ ED-2531

```
3 times in each direction: ±X, ±Y, ±Z
```

EIAJ ED-2531

<sup>\*6</sup> Acceleration: 490 m/s<sup>2</sup>, Pulse width: 11 ms

## 5. Electrical characteristics

5-1.  $V_{DD} = 5.0 V$ 

			$V_{DD}$ :	$= +5.0V \pm 5\%$	%, Temp. =	0∼60°C	
Item	Symbol	Condition	Min.	Тур.	Max.	Unit	
Supply voltage for logic	$V_{DD}$	-	4.75	5.00	5.25	V	
Supply voltage for LCD driving	V <sub>CONT</sub> = V <sub>OP</sub>	$0 \sim 50^{\circ}\mathrm{C}$ *3	1.30	1.80	2.30	V	
*1, *2	V CONT- V OP	~ 60°C	-	-	2.40	V V V V	
Input signal voltage	<b>V</b> 7	"High" level	$0.8 V_{ m DD}$	-	$V_{DD}$	V	
(FRM,LOAD,CP,DISP,D0 ~ D7)	$V_{IN}$	"Low" level	0	-	$0.2 V_{DD}$	V	
Input current	$I_{IN}$	Input signal	-100	-	100	μA	
Rush current for logic	Irush	When LCD turn on.		3.0A (Peal	3.0A (Peak) × 1ms		
Clock frequency	$\mathbf{f}_{\mathrm{CP}}$	-	-	-	10.00	MHz	
Frame frequency *4	$\mathbf{f}_{\mathrm{FRM}}$	-	70	75	80	Hz	
Current consumption for logic	$I_{DD}$	*5	-	27	41	mA	
Power consumption	Pdisp	9	-	135	203	mW	

\*1 Maximum contrast ratio is obtained by adjusting the LCD supply voltage ( $V_{CONT} = V_{OP}$ ) for driving the LCD.

\*2 Frame frequency :  $f_{FRM} = 75Hz$ 

\*3 The LCD module has a temperature compensation circuit.

\*4 In consideration of display quality, it is recommended that frame frequency be set in the range of 70-80Hz. When you have to use higher frame and clock frequencies, confirm the LCD's performance and quality prior to finalizing the frequency value. Generally, as frame and clock frequencies become higher current consumption increases and display quality will degrade.

#### \*5 Display pattern:

Spec No.Part No.PageTQ3C-8EAC0-E1DDV73-00KCG057QVLDJ-G0004

5-2.  $V_{DD} = 3.3 V$ 

 $V_{DD} = +3.3V \pm 0.3V$ , Temp. = 0 ~ 60°C

				$-10.01\pm0.01$	, remp.	
Item	Symbol	Condition	Min.	Тур.	Max.	Unit
Supply voltage for logic	$V_{DD}$	-	3.0	3.3	3.6	V
Supply voltage for LCD driving *1, *2	$V_{CONT} = V_{OP}$	0~50°C *3	1.30	1.80	2.30	V
	V CONT- V OP	~ 60°C	-	-	2.40	V

# 6. Optical characteristics

Optimum contrast is obtained by adjusting the LCD driving voltage ( $V_{OP}$ ) while at the viewing angle of  $= =0^{\circ}$ .

6-1. Definition of contrast ratio

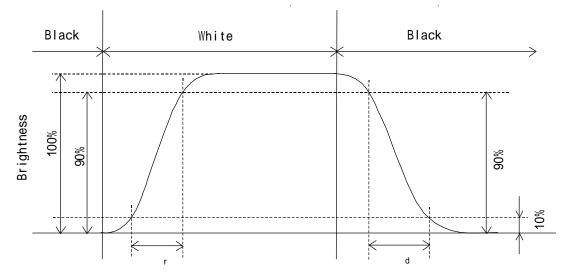

CR(Contrast ratio) = Brightness with all pixels "White" Brightness with all pixels "Black"

6-2. Definition of VOP

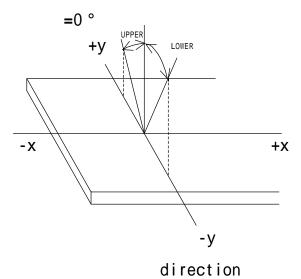

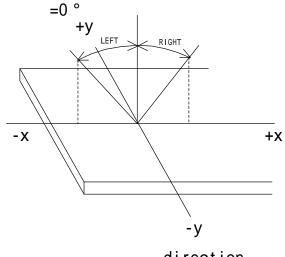

## 6-3. Definition of response time

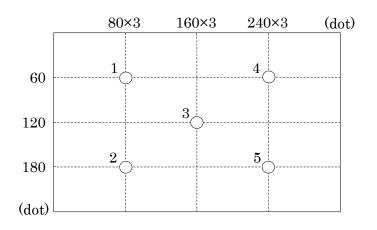

#### 6-4. Definition of viewing angle

direction

6-5. Brightness measuring points

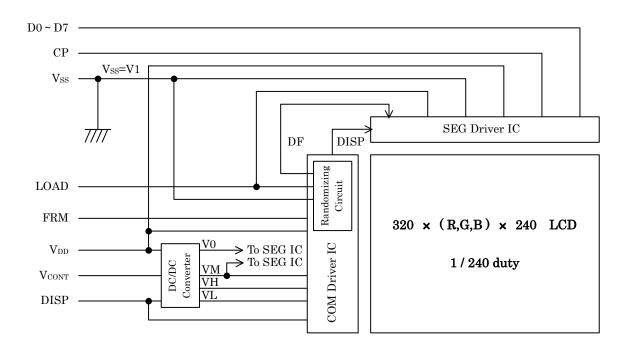

1) Rating is defined on the average in the viewing area.

2) Measured 30 minutes after the LED is powered on. (Ambient temp. =  $25^{\circ}$ C)

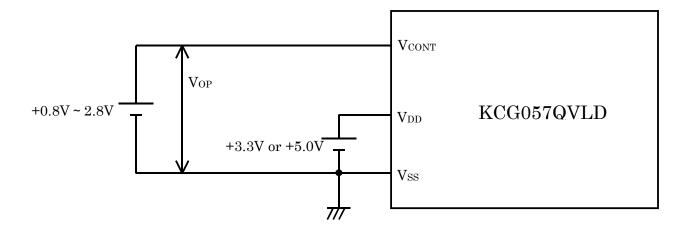

3) Backlight : IF=25mA / 1 LED line

# 7. Circuit block diagram

7-1. Power supply

## 8. Interface signals

No.	Symbol	Description	Level
1	FRM	Synchronous signal for driving scanning line	Н
2	LOAD	Data signal latch clock	$\mathrm{H} \to \mathrm{L}$
3	CP	Data signal shift clock	$\mathrm{H} \to \mathrm{L}$
4	DISP	Display control signal	H(ON),L(OFF)
5	VDD	Power supply for logic	-
6	$V_{\rm SS}$	GND	-
7	VCONT	LCD adjust voltage	-
8	D7		
9	D6		
10	D5		
11	D4	Display data	H(ON),L(OFF)
12	D3	Display data	$\Pi(ON), L(OFF)$
13	D2		
14	D1		
15	D0		
16	VDD	Power supply for logic	
17	V <sub>DD</sub>	Power supply for logic	-
18	$V_{\rm SS}$		
19	$V_{\rm SS}$	GND	-
20	$V_{\rm SS}$		

8-1. Pin assignment of LCD panel

LCD connector Recommended matching FFC or FPC : 08-6210-020-340-800+ (ELCO)

: 0.5mm pitch

## 8-2. Pin assignment of LED

No.	Symbol	Description			
1	AN1	Anode 1			
2	AN2	Anode 2			
3	AN3	Anode 3			
4	CA1	Cathode 1			
5	CA2	Cathode 2			
6	CA3	Cathode 3			

LCD side connector : SHLP-06V-S-B (JST) Recommended matching connector : SM06B-SHLS-TF (JST) : SM06B-SHLS-TF(LF)(SN) (JST)...(RoHS Compliant)

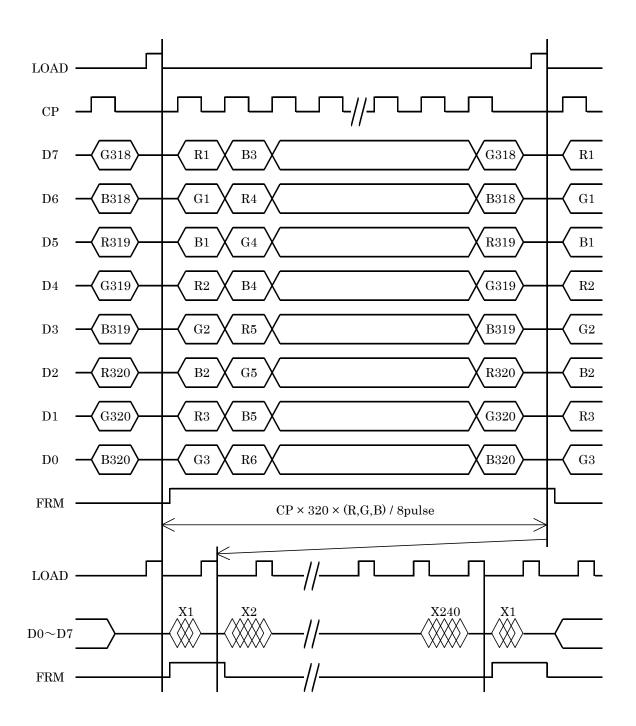

8-3. Pin assignment of touch panel

No.	Symbol	Description
1	уU	y-Upper terminal
2	xL.	x-Left terminal
3	yL	y-Lower terminal
4	xR	x-Right terminal

Touch panel side connector	:	1.25mm pitch	
Recommended matching connector	:	Series FE,FFS	(JST)
	:	KCA-K4R	(DMC)

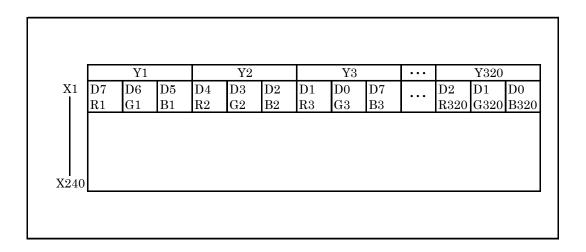

\* The cycle of the LOAD signal should be stable and continuously applied without interruption.

\* The above-mentioned timing chart is a reference to set up a LCD module, not an electrical rating.

Input signal rise up time		tr	-	20	ns
Input signal fall down time		tf	-	20	ns
FRM data set up time		tFS	120	-	ns
FRM data hold time		$\mathrm{tFH}$	30	-	ns

 $^{*1}$  CP cycle is adjusted so that FRM signal is 75Hz.

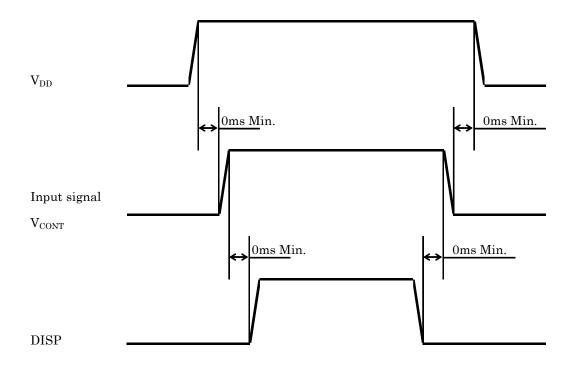

\*2 LOAD cycle is constant.

Spec No.	Part No.	Page
TQ3C-8EAC0-E1DDV73-00	KCG057QVLDJ-G000	13

# 12. Supply voltage sequence condition

In normal operation, logic within the LCD module reverses the polarity of the drive voltage every few lines to prevent DC damage to the liquid crystal material. But when a voltage is present on  $V_{\text{CONT}}$  outside of the time when the  $V_{\text{DD}}$  logic voltage is stable, a drive voltage is applied to the liquid crystal material without the polarity reversals. This sometimes result in a deterioration of display quality and a reduction in life time.

\* Input signal: FRM, LOAD, CP, D0 ~ D7

- \* The above sequence should be designed as to maintain each normal voltage when the liquid crystal module load is applied to your system.
- \* Control the supply voltage sequence to not float any signal line when the LCD panel is being driven.

Spec No.	Part No.	Page
TQ3C-8EAC0-E1DDV73-00	KCG057QVLDJ-G000	14

## 13. Backlight characteristics

LED ratings

Item		Symbol	Min.	Тур.	Max.	Unit	Note
Forward current	*1	IF	-	25	-	mA	Ta=0 ~ 60°C
			-	23.8	26.6	V	IF=25mA, Ta=0
Forward voltage	*1	VF	-	23.1	25.9	V	IF=25mA, Ta=25
			-	22.3	25.1	V	IF=25mA, Ta=60
Operating life time	*2, *3	Т	-	50,000	-	h	IF=25mA, Ta=25

\*1 For each "AN1-CA1", "AN2-CA2" and "AN3-CA3"

\*2 When brightness decrease 50% of initial brightness.

\*3 Life time is estimated data.

\* An input current below 8.0mA may reduce the brightness uniformity of the LED backlight. This is because the amount of light from each LED chip is different. Therefore, please evaluate carefully before finalizing the input current.

## 14. Design guidance for analog touch panel (T/P)

- 14-1 Electrical (In customer's design, please remember the following considerations.)
  - 1 Do not use the current regulated circuit.
  - 2 Keep the current limit with top and bottom layer. (Please refer to "Electrical absolute maxim um ratings" for details.)
  - 3 Analog T/P can not sense two points touching separately.
  - 4~A contact resistance is appeared at the touch point between top and bottom layer. After this resistance has stable read of the T/P position data.
  - 5 Because noise of inverter or peripheral circuits may interfere signal of touch panel itself it is necessary to design carefully in advance to avoid these noise problem.

#### 14-2 Software

- 1 Do the "User Calibration".
- 2 "User Caribration" may be needed with long term using.
- Include "User Caribration" menu in your software.
- 3 When drawing a line with a stylus, there may be a slight discontinuity when the stylus passes over a spacer-dot. If necessary, please provide a compensation feature within your software.

#### 14-3 Mounting on display and housing bezel

- 1 Do not use an adhesive tape to bond it on the front of T/P and hang it to the housing bezel.
- 2 Never expand the T/P top layer (PET-film) like a balloon by internal air pressure. The life of the T/P will be extremely short.
- 3 If a dew will be on the heat-sealed area or exposed traces at the end of a flexible tail, the migration of silver can occur. This will cause sometimes a short circuit.

## 15. Lot number identification

The lot number shall be indicated on the back of the backlight case of each LCD.

## 16. Warranty

16-1. Incoming inspection

Please inspect the LCD within one month after your receipt.

#### 16-2. Production warranty

Kyocera warrants its LCD's for a period of 12 months from the ship date. Kyocera shall, by mutual agreement, replace or re-work defective LCD's that are shown to be Kyocera's responsibility.

## 17. Precautions for use

#### 17-1. Installation of the LCD

- 1) The LCD module has a grounding hole. Please ground the module to prevent noise and to stabilize its performance as circumstances demand.
- 2) The LCD shall be installed so that there is no pressure on the LSI chips.
- 3) The LCD shall be installed flat, without twisting or bending.
- 4) Please design the housing window so that its edges are between the active area and the effective area of the LCD screen.

Must maintain a gap between inside of bezel and touch panel to avoid malfunction or electrode damage of touch panel.

5) Please refer to the following our recommendable value of Clamp-down torque when installing. Clamp-down torque : 0.32±0.03N• m

Please set up 'SPEED-LOW', 'SOFT START-SLOW' when using electric driver.

Recommendable screw JIS tapping screw two types nominal dia.3.0mm installing boss hole depth 4.4±0.2mm

Please be careful not to use high torque which may damage LCD module in installation.

- 17-2. Static electricity
  - 1) Since CMOS ICs are mounted directly onto the LCD glass, protection from static electricity is required.
  - 2) Workers should use body grounding. Operator should wear ground straps.

#### 17-3. LCD operation

- 1) The LCD shall be operated within the limits specified. Operation at values outside of these limits may shorten life, and/or harm display images.
- 2) Adjust the "Supply voltage for LCD driving ( $V_{CONT}$ )" to obtain optimum viewing angle and contrast ratio.
- 17-4. Storage
  - 1) The LCD shall be stored within the temperature and humidity limits specified.
  - Store in a dark area, and protect the LCD from direct sunlight or fluorescent light.
  - 2) Always store the LCD so that it is free from external pressure onto it.

## 17-5. Usage

- 1) <u>DO NOT</u> store in a high humidity environment for extended periods. Polarizer degradation bubbles, and/or peeling off of the polarizer may result.
- 2) Do not push or rub the touch panel's surface with hard to sharp objects such as knives, or the touch panel may be scratched.
- 3) When the touch panel is dirty, gently wipe the surface with a soft cloth, sometimes moistened by a little Ethanol. If a hazardous chemical is dropped on the touch panel by mistake, wipe it off right away to prevent human contact.
- 4) Touch panel edges are sharp. Handle the touch panel with enough care to prevent cuts.
- 5) Always keep the LCD free from condensation during testing. Condensation may permanently spot or stain the polarizer.
- 6) Do not pull the LED lead wires and do not bend the root of the wires. Housing should be designed to protect LED lead wires from external stress.
- 7) Do not disassemble LCD module because it will result in damage.
- 8) This Kyocera LCD module has been specifically designed for use in general electronic devices, but not for use in a special environment such as usage in an active gas. Hence, when the LCD is supposed to be used in a special environment, evaluate the LCD thoroughly beforehand and do not expose the LCD to chemicals such as an active gas.
- 9) Please do not use solid-base image pattern for long hours because a temporary afterimage may appear. We recommend using screen saver etc. in cases where a solid-base image pattern must be used.
- 10) Liquid crystal may leak when the module is broken. Be careful not to let the fluid go into your eyes and mouth. In the case the fluid touches your body; rinse it off right away with water and soap.

## 18. Reliability test data

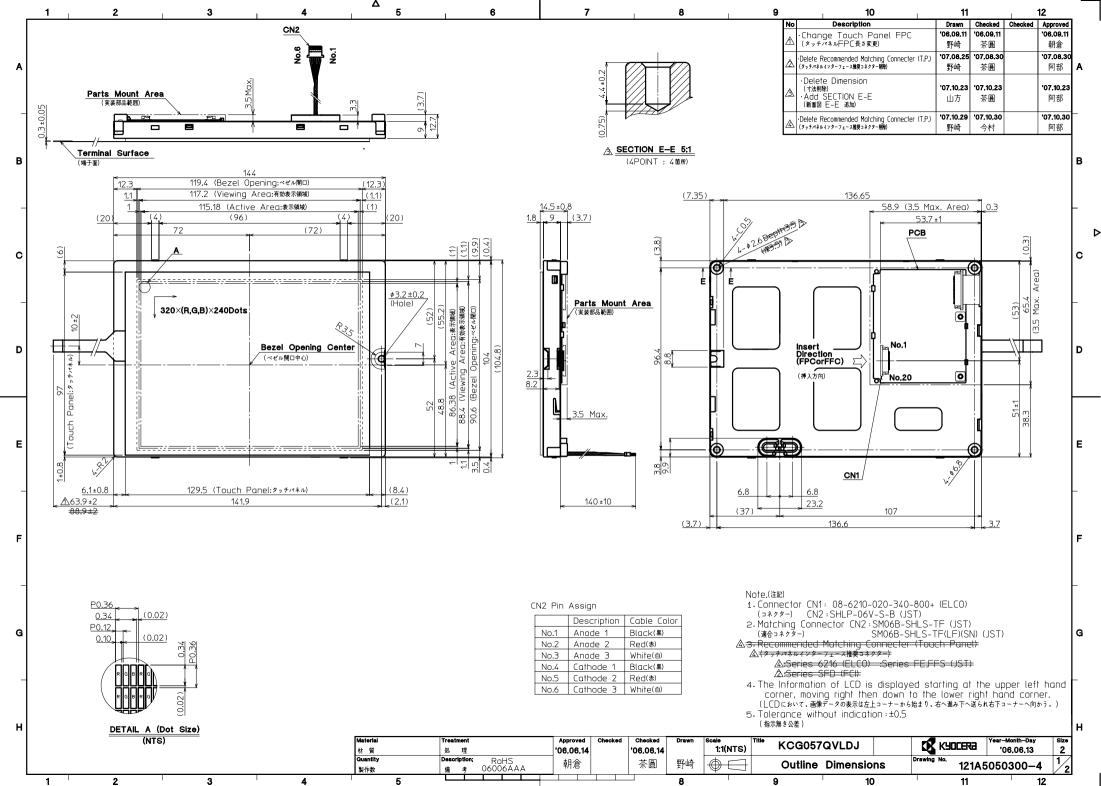

Test item	Test condition	Test time	Jud	gement
High temp. atmosphere	70°C	240h	Display function Display quality Current consumption	: No defect : No defect : No defect
Low temp. atmosphere	-20°C	240h	Display function Display quality Current consumption	: No defect : No defect : No defect
High temp. humidity atmosphere	40°C 90% RH	240h	Display function Display quality Current consumption	: No defect : No defect : No defect

\* Each test item uses a test LCD only once. The tested LCD is not used in any other tests.

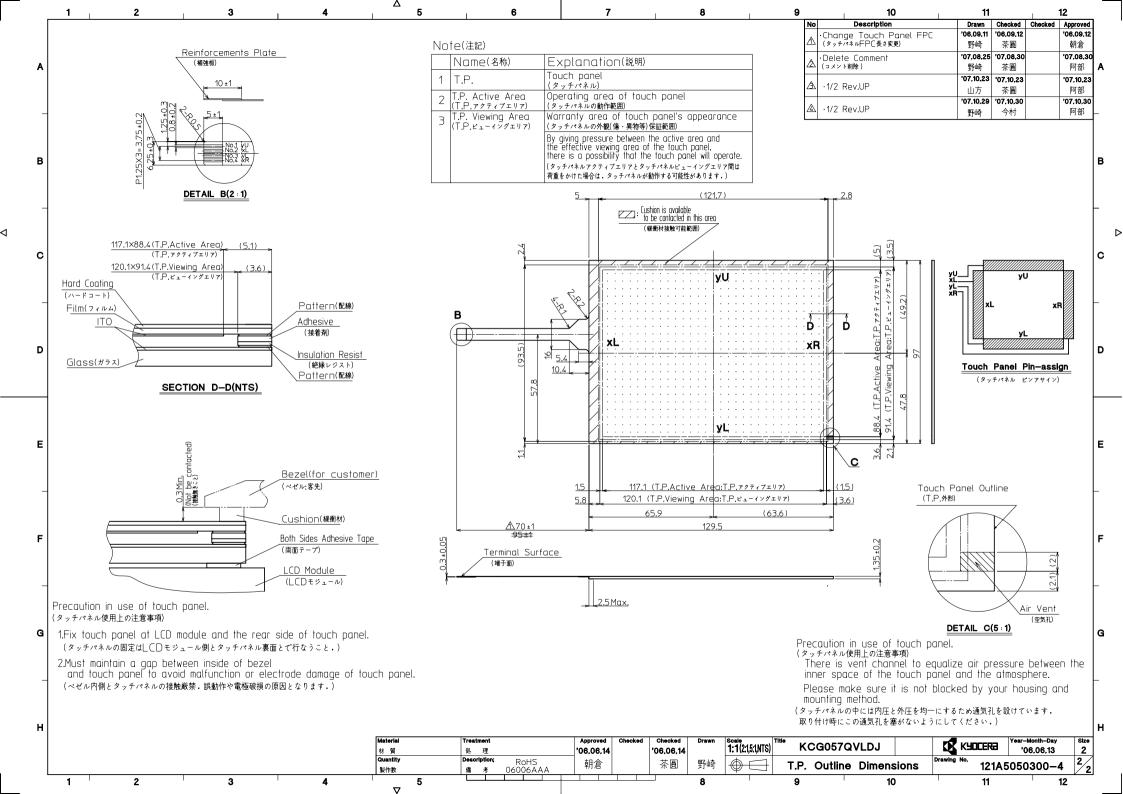

\* The LCD is tested in circumstances in which there is no condensation.

- \* The reliability test is not an out-going inspection.
- \* The result of the reliability test is for your reference purpose only. The reliability test is conducted only to examine the LCD's capability.

# Visuals specification

Note						
inspected, operating vol where optimized contra	in this Inspection Standards are tage $(V_{OP})$ shall be set at the level ast is available. Display quality is ewing area. (Bi-level INSPECTION)					
-	d about the image quality shall be ithin the effective viewing area and outside of the area.					
3.Should any defects which are not specified in this a happen, additional standard shall be determined by agreement between customer and Kyocera.						
4.Inspection conditionsLuminance: 500 Lux minimum.Inspection distance: 300 mm(from the sample)Temperature: 25±5°CDirection: right above						
Pinhole, Bright spot Black spot, Scratch Foreign particle	The color of a small area is different from the remainder. The phenomenon does not change with voltage.					
Contrast variation	The color of a small area is different from the remainder. The phenomenon change with voltage.					
Polarizer (Scratch, Bubble, Dent)	Scratch, Bubble and Dent in the polarizer which can be observed in on / off state.					
	<ul> <li>inspected, operating vol where optimized contra applied up to effective via</li> <li>2.This inspection standard applied to any defect we shall not be applicable to</li> <li>3.Should any defects which happen, additional standagreement between custor</li> <li>4.Inspection conditions Luminance Inspection distance Temperature Direction</li> <li>Pinhole, Bright spot Black spot, Scratch Foreign particle</li> <li>Contrast variation</li> <li>Polarizer</li> </ul>
