Caution

1. This Kyocera LCD module has been specifically designed for use only in electronic devices in the areas of audio control, office automation, industrial control, home appliances, etc. The modules should not be used in applications where module failure could result in physical harm or loss of life, and Kyocera expressly disclaims any and all liability relating in any way to the use of the module in such applications.

2. Customer agrees to indemnify, defend and hold Kyocera harmless from and against any and all actions, claims, losses, damages, liabilities, awards, costs, and expenses, including legal fees, resulting from or arising out of Customer's use, or sale for use, of Kyocera modules in applications.

3. Kyocera shall have the right, which Customer hereby acknowledges, to immediately scrap or destroy tooling for Kyocera modules for which no Purchase Orders have been received from the Customer in a two-year period.

1. Application

This data sheet defines the specification for a 320×240 dot, Transmissive monochrome mode dot matrix type Liquid Crystal Display with LED backlight. 『RoHS Compliant』
2. Construction and Outline

320×240 dots, COG type LCD with LED backlight.

Backlight system   : Side-edge type (LED).

Polarizer   : Glare treatment.

Additional circuit : Bias voltage circuit, Randomizing circuit, DC-DC converter,
                      Temperature compensation circuit

This drawing is showing conception only.

Current consumption for logic	IDD	*4	―	28.5	42.8	mA
Power consumption	Pdisp		―	142.5	214.0	mW

*1 Maximum contrast is obtained by adjusting the LCD driving voltage (Vop=Vcont) while at the viewing angle of $\theta = \phi = 0°$

*2 The LCD has temperature compensation circuit.

*3 In consideration of display quality, it is recommended that frame frequency is set in the range of 70-80Hz. When you have to use higher frame and clock frequencies, confirm the LCD's performan -ce and quality prior to finalizing the frequency values:
Generally, as frame and clock frequencies become higher, current consumption will get bigger and display quality will be degraded.

11. Supply Voltage Sequence Condition

DO NOT apply DC voltage to the LCD panel. DC voltage induce irreversible electrochemical reactions and reduce LCD life. Always follow the power supply ON/OFF sequence of VDD first, input signal second, VCONT third and finally DISP. This will prevent DC driving of the LCD or CMOS LSI latch up as shown below.
* Input signal : CP, LOAD, FRM, D0～D3

* The above sequence should be designed as to keep each normal figure on condition that liquid crystal module is loaded on your system.

* Control the input signal and VCONT to the above ON-OFF timing when you switch ON/OFF the display during VDD and DISP are on.
  And design the circuit as VCONT's OFF level become GND level at the same time.

* Control the supply voltage sequence not to float all signal line when the LCD panel is driving.

* An input current below 8.0mA may reduce the brightness uniformity of the LED backlight.
   This is because the amount of light from each LED chip is different. Therefore, please
   evaluate carefully before finalizing the input current.

１４. Warranty

14-1. Incoming inspection

Please inspect the LCD within one month after your receipt.

14-2. Production Warranty

Kyocera warrants its LCDs for a period of 12 months after receipt by the purchaser, and within the limits specified. Kyocera shall, by mutual agreement, replace or rework defective LCDs that are shown to be Kyocera's responsibility.

15. Precautions for use

15-1. Installation of the LCD
1. Please ground of an LCD module, in order to stabilize brightness and display quality.
2. The LCD shall be installed so that there is no pressure on the LSI chips.
3. The LCD shall be installed flat, without twisting or bending.
4. The display window size should be the same as the effective viewing area.
5. In case you use outside frame of effective viewing area as outward appearance of your product, unevenness of its outward appearance is out of guarantee.
6. This Kyocera LCD module has been specifically designed for use in general electronic devices, but not for use in a special environment such as usage in an active gas.
   Hence, when the LCD is supposed to be used in a special environment, evaluate the LCD thoroughly beforehand and do not expose the LCD to chemicals such as an active gas.

15-2. Static Electricity
1. Since CMOS ICs are mounted directly onto the LCD glass, protection from static electricity is required. Operation should wear ground straps.

15-3. LCD Operation
1. The LCD shall be operated within the limits specified. Operation at values outside of these limits may shorten life, and/or harm display images.
2. Adjust "LCD driving voltage" to obtain optimum viewing angle and contrast.
3. Operation of the LCD at temperature below the limit specified may cause image degradation and/or bubbles.
   It may also change the characteristics of the liquid crystal.
   <u>This phenomenon may not recover.</u> The LCD shall be operated within the temperature limits specified.

15-4. Storage
1. The LCD shall be stored within the temperature and humidity limits specified.
   Store in a dark area, and protected the LCD from direct sunlight or fluorescent light.
2. Always store the LCD so that it is free from external pressure onto it.
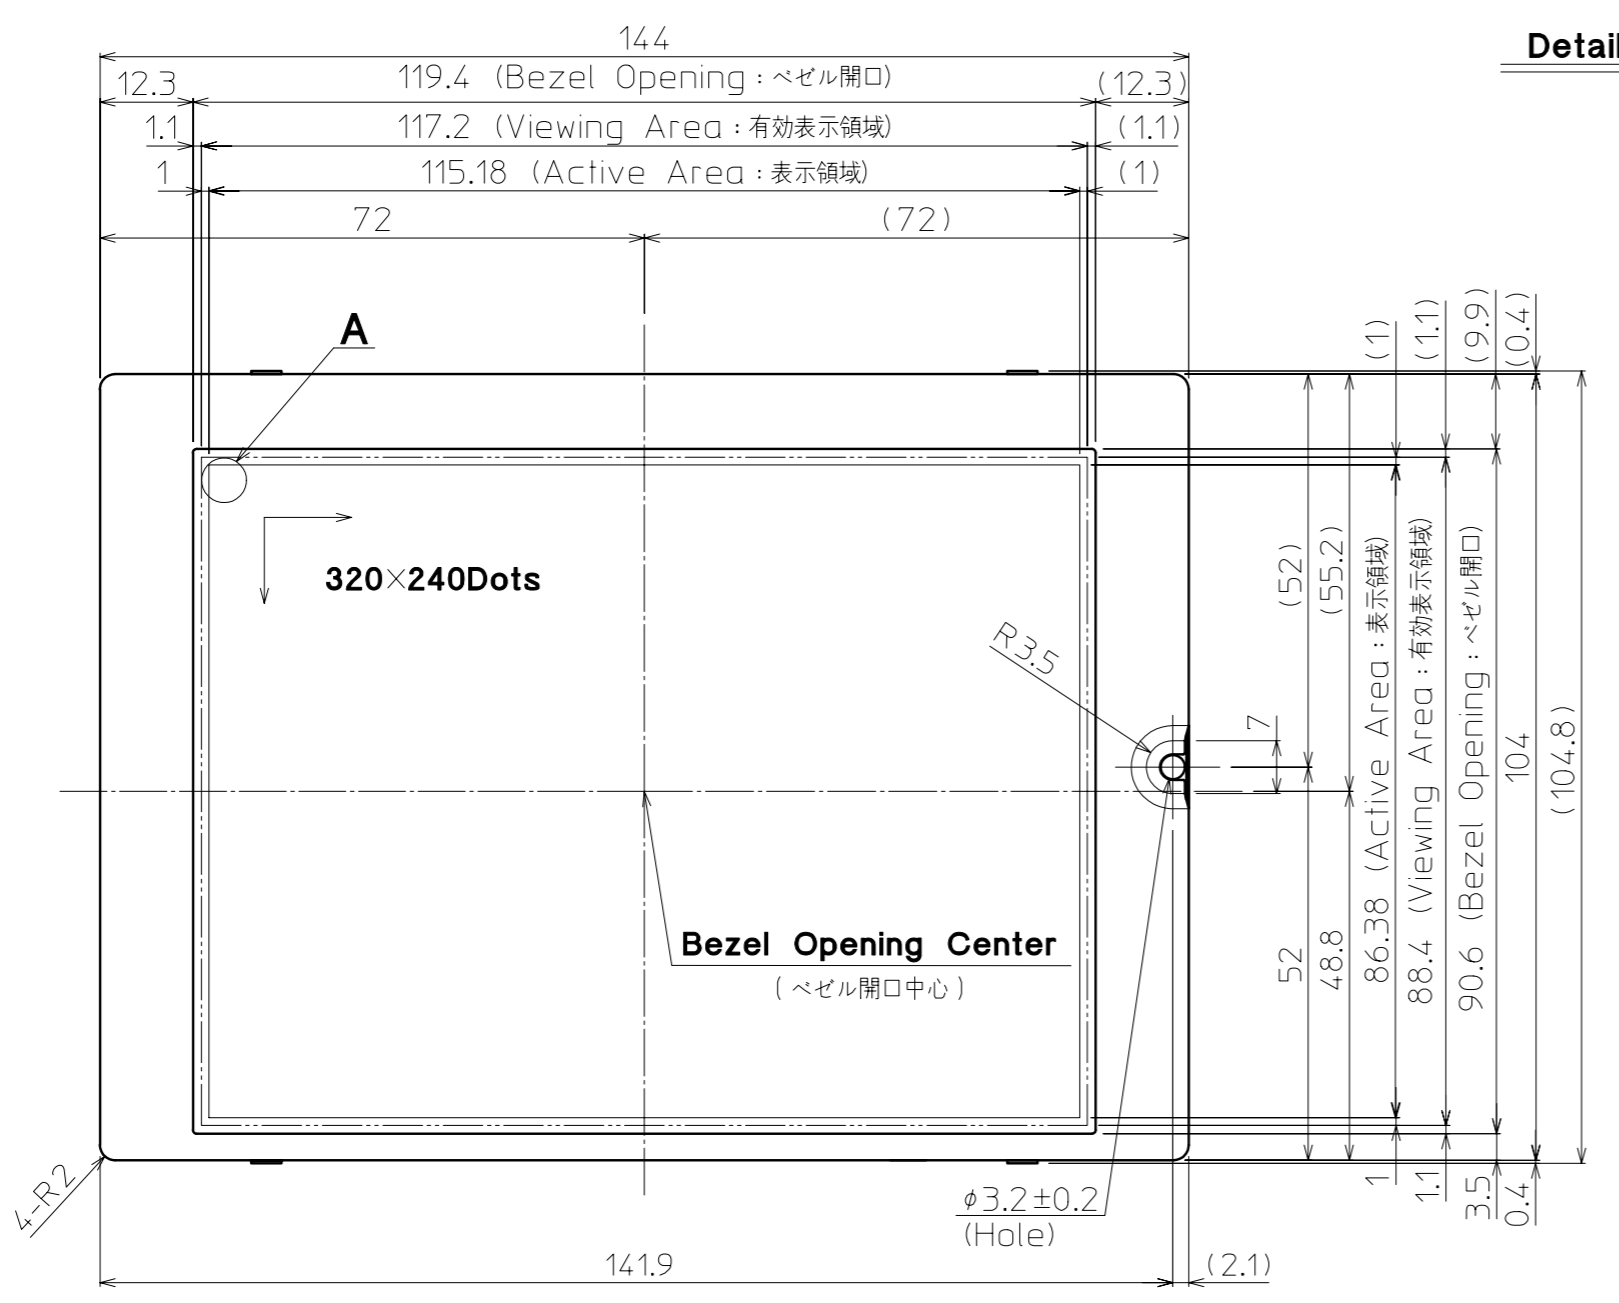

15-5. Caution items when handling the LCD
  1. DO NOT store in a high humidity environment for extended periods.
     Image degradation, bubbles, and/or peeling off of polarizer may result.
  2. The front polarizer is easily scratched or damaged.
     Prevent touching it with any hard material, and from being pushed or rubbed.
  3. The LCD screen may be cleaned with a soft cloth or cotton pad.
     Methanol, or Isopropyl Alcohol may be used, but insure that all solvent residue is removed.
  4. Water may cause damage or discoloration of the polarizer.
     Clean any condensation or moisture from any source immediately.
  5. Always keep the LCD free from condensation during testing.
     Condensation may permanently spot or stain the polarizers.
  6. Do not disassemble LCD module because it will result in damage.
  7. Please do not use solid-base image pattern for long hours because a temporary afterimage may
     appear. We recommend to use screen saver etc. in cases where a solid-base image pattern must
     be used.
  8. Liquid crystal may leak when the module is broken. Be careful not to let the fluid
     go into your eyes and mouth. In the case the fluid touches your body, rinse it off
     right away with water and soap.

16. Reliability Data / Environmental Test

TEST ITEM	TEST CONDITION	TEST TIME	RESULT
High Temp. Atmosphere	60 ℃	240 h.	Display Quality : No defect Display Function : No defect Current Consumption : No defect
Low Temp. Atmosphere	-20 ℃	240 h.	Low Temp. Bubble : None Solid Crystallization of Liquid Crystal : None Display Quality : No defect Display Function : No defect Current Consumption : No defect

High Temp. Operation	60 ℃ Vop	500 h.	Display Quality : No defect Display Function : No defect Current Consumption : No defect

  * Each test item uses a test LCD only once. The tested LCD is not used in any other tests.
  * The LCD is tested in circumstances in which there is no condensation.
  * The tested LCD is inspected after 24 hours of storage at room temperature and room humidity
    after each test is finished.
  * The reliability test is not an out-going inspection.
  * The results of the reliability test are for your reference purpose only.
    The reliability test is conducted only to examine the LCD's capability.
