Caution

1. This Kyocera LCD module has been specifically designed for use only in electronic devices in the areas of audio control, office automation, industrial control, home appliances, etc. The modules should not be used in applications where module failure could result in physical harm or loss of life, and Kyocera expressly disclaims any and all liability relating in any way to the use of the module in such applications.

2. Customer agrees to indemnify, defend and hold Kyocera harmless from and against any and all actions, claims, losses, damages, liabilities, awards, costs, and expenses, including legal fees, resulting from or arising out of Customer's use, or sale for use, of Kyocera modules in applications.

3. Kyocera shall have the right, which Customer hereby acknowledges, to immediately scrap or destroy tooling for Kyocera modules for which no Purchase Orders have been received from the Customer in a two-year period.

. Application

This data sheet defines the specification for a (640× R.G.B)× 240 dot, STN Transflective color dot matrix type Liquid Crystal Display with CFL backlight.   RoHS Compliance

. Construction and Outline

(640× R.G.B)× 240 dots, COG type LCD with CFL backlight.

Backlight system   : Side-edge type CFL (1 tube).

Inverter   : Option.
                      Recommended Inverter : PH-BLC08-K2(HITACHI MEDIA ELECTRONICS)
                      or Equivalent.

Polarizer   : Glare treatment.

Additional circuit : Bias voltage circuit, Randomizing circuit, DC-DC converter

This drawing is showing conception only.

. Mechanical Specifications

ITEM	SPECIFICATION	UNIT
Outline dimensions	174.2 (W) × 73.4 (H) × 7.6 (D) (PCB and components not included.) Refer outline drawing in detail	mm
Effective viewing area	149.8 (W) × 57.4 (H)	mm
Dot number	(640× R.G.B) (W) × 240 (H)	Dots
Dot size	0.057 (W) × 0.211 (H)	mm
Dot pitch	0.077 (W) × 0.231 (H)	mm
Display color *1	White *2	
Base color *1	Black *2	
Mass	135	g

*1 Due to the characteristics of the LC material, the color vary with environmental temperature.

*2 Negative-type display
    Display data "H" :R.G.B Dots ON : White
    Display data "L" :R.G.B Dots OFF : Black

. Absolute Maximum Ratings

4-1. Electrical absolute maximum ratings

ITEM	SYMBOL	MIN	MAX	UNIT
Supply voltage for logic	VDD	0	6.0	V
Supply voltage for LCD driving	VCONT	0	VDD	V
Input signal voltage *1	Vin	0	VDD	V
FRM frequency	fFRM		150	Hz

*1 Input signal : CP, LOAD, FRM, DISP, D0 D7

4-2. Environmental absolute maximum ratings

ITEM	SYMBOL	MIN	MAX	UNIT
Operating temperature *1	Top	0	50	
Storage temperature *2	T	-20	60	
Operating humidity *3	Hop	10	*4	%RH
Storage humidity *3	H	10	*4	%RH
Vibration		*5	*5	
Shock		*6	*6	

*1 LCD's display quality shall not be guaranteed at the temperature range of :
    below 0 and upper 40 .
*2 Temp. = -20   48 h , Temp = 60   168 h
    Store LCD panel at normal temperature/humidity.
    Keep it free from vibration and shock.
    LCD panel that is kept at low or high temperature for a long time can be defective due to
    the other conditions, even if the temperature satisfies standard.
    (Please refers to 16. Precautions for use as detail)
*3 Non-condensation.
*4 Temp.   40 , 85   RH Max.
    Temp.   40 , Absolute Humidity shall be less than 85 RH at 40 .
*5

Frequency	10 55 Hz	Converted to acceleration value : 0.3 9 m/s^2
Vibration width	0.15 mm	
Interval	10-55-10 Hz 1 minute	

    2 hours in each direction X/Y/Z (6 hours as total)
    EIAJ ED-2531
*6 Acceleration: 490m/s^2
    Pulse width : 11 ms
    3 times in each direction : ± X/± Y/± Z.
    EIAJ ED-2531

. Electrical Characteristics

5-1. VDD=5.0V

VDD = +5.0V ± 5 , Temp. = 0 50

ITEM	SYMBOL	CONDITION	MIN	TYP.	MAX	UNIT
Supply voltage for logic	VDD		4.75	5.00	5.25	V
LCD driving voltage *1	Vop=VCONT	0	1.20			V
		25	1.30	1.80	2.30	V
		50			2.40	V
Input voltage (FRM,LOAD,CP,DISP,D0 D7)	Vin	"H" level	0.8VDD		VDD	V
		"L" level	0		0.2VDD	V
Input current	Iin	Input signal	-100		100	μA
Rush current for logic	Irush	When rush current happens	3.0A(Peak) × 1ms			
Clock frequency	cp		4.03	4.32	10.00	MHz
Frame frequency *2			70	75	150	Hz
Current consumption for logic	IDD	*3		40	60	mA
Power consumption	Pdisp			200	300	mW

*1 Maximum contrast ratio is obtained by adjusting the LCD supply voltage (Vop = VCONT) for
   driving LCD.

*2 In consideration of display quality, it is recommended that frame frequency is set in the range
   of 70-80Hz. When you have to use higher frame and clock frequencies, confirm the LCD s
   performance and quality prior to finalizing the frequency values:
   Generally, as frame and clock frequencies become higher current consumption will get bigger
   and display quality will be degraded.

*3 Display high frequency pattern, (see below).
   Vop = VCONT ,   = 75 Hz , fcp = 4.32MHz, Temp. = 25
   Pattern:

5-2. VDD=3.3V

ITEM	SYMBOL	CONDITION	MIN	TYP.	MAX	UNIT
Supply voltage for logic	VDD		3.0	3.3	3.6	V
LCD driving voltage *1	Vop= VCONT	0	1.20			V
		25	1.30	1.80	2.30	V
		50			2.40	V
Input voltage (FRM,LOAD,CP,DISP,D0 D7)	Vin	"H" level	0.8VDD		VDD	V
		"L" level	0		0.2VDD	V
Input current	Iin	Input signal	-100		100	μA
Rush current for logic	Irush	When rush current happens	3.0A(Peak) × 1ms			
Clock frequency	cp		4.03	4.32	10.00	MHz
Frame frequency *2			70	75	150	Hz
Current consumption for logic	IDD	*3		55	83	mA
Power consumption	Pdisp			182	274	mW

*1 Maximum contrast ratio is obtained by adjusting the LCD supply voltage (Vop= VCONT) for driving LCD.

*2 In consideration of display quality, it is recommended that frame frequency is set in the range of 70-80Hz. When you have to use higher frame and clock frequencies, confirm the LCD s performance and quality prior to finalizing the frequency values:
Generally, as frame and clock frequencies become higher current consumption will get bigger and display quality will be degraded.

*3 Display high frequency pattern, (see below).
Vop = VCONT , = 75 Hz , fcp = 4.32MHz, Temp. = 25
Pattern:

Optical Characteristics

6-1. Reflective mode

Measuring Spot = 6mm , Temp. = 25

ITEM		SYMBOL	CONDITION	MIN	TYP.	MAX	UNIT
Response time	Rise	Tr	= =0°		190	290	ns
	Down	Td	= =0°		180	280	ns
Contrast ratio		CR	= =0°	5.0	10.0		
Reflectance				15.0	30.0		%

Optimum contrast is obtained by adjusting the LCD driving voltage(Vop) while at the viewing angle of = = 0° .

6-2. Transmissive mode

Temp. = 25

ITEM		SYMBOL	CONDITION		MIN	TYP.	MAX	UNIT
Response time	Rise	Tr	= =0°			190	290	ns
	Down	Td	= =0°			180	280	ns
Viewing angle range			CR 2	Upper		30		deg.
				Lower		20		
				Left		45		deg.
				Right		45		
Contrast ratio		CR	= =0°		10.0	20.0		
Brightness		L	IL=5.0mA		35	55		cd/m²
Chromaticity coordinates	Red	x	= =0°		0.35	0.40	0.45	
		y			0.22	0.27	0.32	
	Green	x	= =0°		0.22	0.27	0.32	
		y			0.30	0.35	0.40	
	Blue	x	= =0°		0.15	0.20	0.25	
		y			0.16	0.21	0.26	
	White	x	= =0°		0.23	0.28	0.33	
		y			0.24	0.29	0.34	

Optimum contrast is obtained by adjusting the LCD driving voltage(Vop) while at the viewing angle of = = 0° .

6-3. Definition of Reflectance

$$(\text{Reflectance}) \; = \; \frac{\text{Measured Reflection Brightness}}{\text{Reflection Brightness against Standard White Board}} \; \times \; 100[\%]$$
6-4. Definition of Contrast (Reflective Mode)

$$(\text{Contrast}) \; = \; \frac{\text{Reflectance at all pixels "White"}}{\text{Reflectance at all pixels "Black"}}$$
6-5. Definition of Contrast (Transmissive Mode)

$$(\text{Contrast}) \; = \; \frac{\text{Brightness at all pixels "White"}}{\text{Brightness at all pixels "Black"}}$$

6-6. Definition of Vop

6-7. Definition of response time

6-8. Definition of viewing angle

(direction)   (direction)
6-9. Measuring points

```
                    160×3        320×3        480×3         (dot)
         ┌──────────────────────────────────────────────────┐
         │        1 ┊                      4 ┊               │
      60 ├──────────────┊───────────────────┊───────────────┤
         │          3 ┊                                      │
     120 ├────────────┊─────────────────────────────────────┤
         │        2 ┊                      5 ┊               │
     180 ├──────────────┊───────────────────┊───────────────┤
         │                                                   │
   (dot) └──────────────────────────────────────────────────┘
```
1) Rating is defined as the average brightness inside the viewing area.
2) 30 minutes after CFL is turned on. (Ambient Temp.= 25)
3) The inverter should meet the eccentric conditions;
   -Sine, symmetric waveform without spike in positive and negative.
4) Measuring Inverter ; PH-BLC08-K2(HITACHI MEDIA ELECTRONICS)

6-10. Measurement method of reflectance (Reflectance)

Photo detecter

Ring light source

FRMData Set Up Time	tFS	120		ns
FRMData Hold Time	tFH	30		ns

*1 CP Cycle is adjust so that FRMsignal is 75Hz.

*2 LOAD Cycle is constant.

. Supply Voltage Sequence Condition

   DO NOT apply DC voltage to the LCD panel. DC voltage induce irreversible electrochemical
   reactions and reduce LCD life. Always follow the power supply ON/OFF sequence of VDD first,
   input signal second, VCONT third and finally DISP. This will prevent DC driving of the LCD or
   CMOS LSI latch up as shown below.

VDD

0ms MIN   0ms MIN

Input signal
VCONT

        0ms MIN   0ms MIN

DISP
   * Input signal : CP, LOAD, FRM, VCONT, D0~D7
     Each signal (CP, LOAD, FRM) is constant

   * The above sequence should be designed as to keep each normal figure on condition that liquid
     crystal module is loaded on your system.

   * Control the supply voltage sequence not to float all signal line when the LCD panel is driving.

. Backlight Characteristics

Temp. = 25

ITEM	SYMBOL	MIN	TYP.	MAX	NOTE
Starting discharge Voltage *1	VS			965 Vrms.	0
				645 Vrms.	25
Discharging tube current *2,*3	IL	2.0 mArms.	5.0 mArms.	6.0 mArms.	
Discharging tube voltage	VL		395 Vrms.		
Operating life *4 (IL=5.0 mArms.)	T	36,000 h	54,000 h		
Operating frequency	F	40 kHz		100 kHz	

*1 The Non-load output voltage (VS) of the inverter should be designed to have some margin,
    because VS may increase due to the leak current which may be caused by wiring of CFL cables.
    (Reference value: 1255 Vrms MIN)

*2 We recommend that you should set the discharging tube current at lower than typical value
    so as to prevent the heat accumulation of CFL tube from deteriorating a performance of the LCD.

*3 Do not apply more than 6.0mA discharging tube current. Because CFL maybe broken due to over
    current.

*4 When the illuminance or quantity of light has decreased to 50   of the initial value.
    Average life time of CFL will be decreased when LCD is operating at lower and higher temperature.

*   The inverter should meet the eccentric conditions ; sine, symmetric waveform without spike in
    positive and negative.

Lot Number Identification

The lot number shall be indicated on the back of the backlight case of each LCD.

Warranty

15-1. Incoming inspection

Please inspect the LCD within one month after your receipt.

15-2. Production Warranty

Kyocera warrants its LCDs for a period of 12 months after receipt by the purchaser, and within the limits specified. Kyocera shall, by mutual agreement, replace or rework defective LCDs that are shown to be Kyocera's responsibility.

Precautions for use

16-1. Installation of the LCD
1. LCD hole(right side) are not connected with GND, but the LCD is structured to have GND connection available to protect against noise. We recommend to connect customer's frame GND to LCD frame in order to stabilize the display performance.
2. A transparent protection plate shall be added to protect the LCD and its polarizers.
3. The LCD shall be installed so that there is no pressure on the LSI chips.
4. The LCD shall be installed flat, without twisting or bending.
5. The display window size should be the same as the effective viewing area.
6. In case you use outside frame of effective viewing area as outward appearance of your product, unevenness of its outward appearance is out of guarantee.
7. Do not pull the CFL lead wires and do not bend the root of the wires.
   Housing should be designed to protect CFL lead wires from external stress.
8. This Kyocera LCD module has been specifically designed for use in general electronic devices, but not for use in a special environment such as usage in an active gas.
   Hence, when the LCD is supposed to be used in a special environment, evaluate the LCD thoroughly beforehand and do not expose the LCD to chemicals such as an active gas.

16-2. Static Electricity
1. Since CMOS ICs are mounted directly onto the LCD glass, protection from static electricity is required. Operation should wear ground straps.

16-3. LCD Operation
1. The LCD shall be operated within the limits specified. Operation at values outside of these limits may shorten life, and/or harm display images.
2. Adjust "LCD driving voltage" to obtain optimum viewing angle and contrast.
3. Operation of the LCD at temperature below the limit specified may cause image degradation and/or bubbles.
   It may also change the characteristics of the liquid crystal.
   This phenomenon may not recover. The LCD shall be operated within the temperature limits specified.

16-4. Storage
1. The LCD shall be stored within the temperature and humidity limits specified.
   Store in a dark area, and protected the LCD from direct sunlight or fluorescent light.
2. Always store the LCD so that it is free from external pressure onto it.

16-5. Screen Surface
1. DO NOT store in a high humidity environment for extended periods.
   Image degradation, bubbles, and/or peeling off of polarizer may result.
2. The front polarizer is easily scratched or damaged. Prevent touching it with any hard material, and from being pushed or rubbed.
3. The LCD screen may be cleaned with a soft cloth or cotton pad. Methanol, or Isopropyl Alcohol may be used, but insure that all solvent residue is removed.
4. Water may cause damage or discoloration of the polarizer. Clean any condensation or moisture from any source immediately.
5. Always keep the LCD free from condensation during testing.
   Condensation may permanently spot or stain the polarizers.
6. Please do not use solid-base image pattern for long hours because a temporary afterimage may appear. We recommend to use screen saver etc. in cases where a solid-base image pattern must be used.
7. Liquid crystal may leak when the module is broken. Be careful not to let the fluid go into your eyes and mouth. In the case the fluid touches your body, rinse it off right away with water and soap.

Reliability Data / Environmental Test

TEST ITEM	TEST CONDITION	TEST TIME	RESULT
High Temp. Atmosphere	70	240 h	Display Quality : No defect Display Function : No defect Current Consumption : No defect
Low Temp. Atmosphere	-20	240 h	Low Temp. Bubble : None Solid Crystallization of Liquid Crystal : None Display Quality : No defect Display Function : No defect Current Consumption : No defect
High Temp. Humidity Atmosphere	40 90%RH	240 h	Display Quality : No defect Display Function : No defect Peel-off of Organic Sealing : None Current Consumption : No defect
Temp. Cycle	-20 0.5 h R.T. 0.5 h 70 0.5 h	10 cycles	Display Quality : No defect Display Function : No defect Peel-off of Organic Sealing : None Bubble on Cell : None
High Temp. Operation	50 Vop	500 h	Display Quality : No defect Current Consumption : No defect
Point Activation life	Polyacetal stylus (R0.8) Hitting force 3N Hitting speed 2 time/s	one million times	Display Quality : No defect Current Consumption : No defect

* Each test item uses a test LCD only once. The tested LCD is not used in any other tests.

* The LCD is tested in circumstances in which there is no condensation.

* The tested LCD is inspected after 24 hours of storage at room temperature and room humidity after each test is finished.

* The reliability test is not an out-going inspection.

* The results of the reliability test are for your reference purpose only.
  The reliability test is conducted only to examine the LCD's capability.

Visuals specification

1)Note

Item	Note	
General	1.When defects specified in this Inspection Standards are inspected, operating voltage(Vop) shall be set at the level where optimized contrast is available. Display quality is applied up to effective viewing area. (Bi-Level INSPECTION) 2.This inspection standard about the image quality shall be applied to any defect within the effective viewing area and shall not be applicable to outside of the area. 3.Should any defects which are not specified in this standard happen, additional standard shall be determined by mutual agreement between customer and Kyocera. 4. Inspection conditions 　Luminance　　　　　　　: 500 Lux minimum . 　Inspection distance : 300 mm (from the sample) 　Temperature　　　　　 : 25 ± 5 ℃ 　Direction　　　　　　　: right above	
Definition of Inspection item	Pinhole, Bright spot Black spot, Scratch Foreign particle	The color of a small area is different from the remainder. The phenomenon does not change with voltage.
	Contrast variation	The color of a small area is different from the remainder. The phenomenon changes with voltage.
	Polarizer (Scratch, Bubble, Dent)	Scratch, Bubble and Dent in the polarizer which can be observed in on / off state.

2）Standard

Inspection item	Judgement standard
Pinhole, Bright spot Black spot, Foreign particle	 d = (a + b) / 2 	Category	Size (mm)	Acceptable number
---	---	---
A	d ≦ 0.2	neglected
B	0.2 ＜ d ≦ 0.3	5
C	0.3 ＜ d ≦ 0.5	3
D	0.5 ＜ d	0	
Scratch,Foreign particle	 |	Width (mm)	Length (mm)	Acceptable No.
---	---	---	---
A	W ≦ 0.03	—	neglected
B		L ≦ 2.0	neglected
C	0.03＜ W ≦0.1	2.0 ＜ L ≦ 4.0	3
D		4.0 ＜ L	0
E	0.1 ＜ W	—	According to 'Circular'	
Contrast variation	 d = (a + b) / 2 	Category	Size (mm)	Acceptable number
---	---	---
A	d ≦ 0.5	neglected
B	0.5 ＜ d ≦ 0.7	3
C	0.7 ＜ d	0	

Inspection item	Judgement standard
Polarizer (Scratch, Bubble, Dent)	(1) Scratch

	Width (mm)	Length (mm)	Acceptable No.
A	W ≦ 0.1	―	neglected
B	0.1 < W ≦0.3	L ≦ 5.0	neglected
C		5.0 < L	0
D	0.3 < W	―	0

(2) Bubble (dent)

$$d = (a + b) / 2$$

Category	Size (mm)	Acceptable number
A	d ≦ 0.2	neglected
B	0.2 < d ≦ 0.3	5
C	0.3 < d ≦ 0.5	3
D	0.5 < d	0
