

## Hex Bus-Drivers with 3-State Outputs

These high-speed Hex bus drivers are designed specifically to improve both the performance and density of 3-state memory address drivers, clock drivers, and bus-oriented receivers and transmitters.

The '365 and '366 have two output enables ( $\bar{G}1$  and  $\bar{G}2$ ) NOR'ed together to control all six gates. The '367 and '368 have two output enables which are configured so that one enable ( $\bar{G}1$ ) controls four gates and the other ( $\bar{G}2$ ) controls the remaining two gates. The '366 and '368 have inverting data paths. The '365 and '367 have noninverting data paths.

These devices provide speeds and drive capability equivalent to their ALSTTL counterparts and yet maintain CMOS power levels. The input and output voltage levels allow direct interface with TTL, NMOS and CMOS devices without any external components.

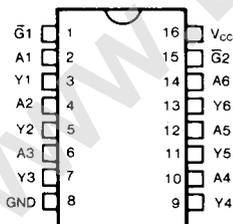

All inputs and outputs are protected from damage due to static discharge by internal diode clamps to  $V_{CC}$  and ground.

## FEATURES

- Function, pin-out, speed and drive compatibility with 54/74ALS logic family
- Low power consumption characteristic of CMOS
- 3-State outputs with high drive current  
 ( $I_{OL} = 24 \text{ mA} @ V_{OL} = 0.5V$ ) for direct bus interface
- Inputs and outputs interface directly with TTL, NMOS and CMOS devices
- Wide operating voltage range: 4.5V to 5.5V
- Characterized for operation over industrial and military temperature ranges:  
 KS74AHCT:  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$   
 KS54AHCT:  $-55^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$
