

## ● Description

The KTLP160J series consist of a GaAs infrared emitting diode optically coupled to a on-zero-crossing silicon bilateral AC switch (TRIAC). These devices isolate low voltage logic from 115/240 VAC lines to provide random phase control of high current TRIACs or thyristors. These devices feature greatly enhanced static dv/dt capability to ensure stable switching performance of inductive loads.

## ● Features

1. Pb free and RoHS compliant
2. 600V peak blocking voltage
3. Subminiature type (The volume is smaller than that of our conventional DIP type by as far as 30%)
4. Simplifies logic control of 115/240 VAC power
5. Non zero voltage crossing
6. Isolation voltage between input and output (Viso : 3750Vms)
7. MSL class 1
8. Agency Approvals :
  - UL Approved (No. E169586): UL1577
