LA6505 — For CD-ROM, DVD-ROM and MD players Six-Channel Driver

Overview

The LA6505 is a six-channel driver for CD and MD players and recorders.

It adopts direct PWM drive output in the spindle motor drive to minimize heat generation at high spindle speeds. It also features a soft switching function that minimizes spindle motor drive noise by making the current changes at each phase switch more gradual.

The sled motor driver implements two-phase stepping drive and supports direct PWM inputs. The LA6505 uses a BTL amplifier design for the focus and tracking driver blocks, and a similar design for the loading driver as well.

Functions

- (1) Spindle motor driver block
 - Three-phase brushless motor driver
 - Adopts a current feedback direct PWM drive design
 - Supports analog inputs and features a V-type control amplifier
 - Built-in oscillator circuit (The oscillator frequency can be set with an external capacitor.)
 - Soft-switching drive
 - FG output for one phase (the U phase)
 - Built-in reverse rotation prevention circuit
 - Built-in Hall sensor power supply (npn transistor, open collector output)
 - Current limiter setting function (The limit is set by the resistor RF.)
 - Standby mode (SS) function that operates for the spindle driver and BTL amplifiers.
- (2) Sled motor driver block
 - Adopts a current feedback direct PWM drive design
 - Supports stepping motors
 - Muting function (MUTE-SLD; only applies to the sled driver)
- (3) Sled motor driver block
 - BTL amplifier based design
- Built-in input operational amplifiers
- Built-in level shifting circuits
- Standby mode (SS) function
- Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment (home appliances, AV equipment, communication device, office equipment, industrial equipment etc.). The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for applications outside the standard applications of our customer who is considering such use and/or outside the scope of our intended standard applications, please consult with us prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.

■ Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

www.DataSheet4U

- (4) Loading block
 - BTL amplifier based design
 - Muting function (MUTE-LOAD; only applies to the loading driver)
- (5) Other circuits
 - Built-in thermal shutdown circuit (design guarantee)

Specifications

Absolute Maximum Ratings at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Supply voltage - V _{CC}	V _{CC} S	Signal system supply voltage, V _{CC} ≥ VS-*	14	V
Supply voltage - P-SPD	VS-SPD	Spindle block power stage supply voltage	14	V
Supply voltage - P-SLD	VS-SLD	Sled block power stage supply voltage	14	V
Supply voltage - P-BTL	VS-BTL	BTL amplifier block power stage supply voltage	14	V
Allowable power dissipation	Pd max1	Independent IC	0.85	W
	Pd max2	When mounted on the specified circuit	1.72	W
Maximum input voltage	V _{IN} max		6	V
Maximum output current 1	I _O max1	Spindle block	1.25	Α
Maximum output current 2	I _O max2	Sled block output	0.5	Α
Maximum output current 3	I _O max3	Outputs for the focus, tracking, and loading blocks	0.5	А
Operating temperature	Topr		-30 to +85	°C
Storage temperature	Tstg		-55 to +150	°C

^{*} Specified board size : 76.1mm×114.3mm×1.6mm, glass epoxy board.

Recommended Operating Conditions at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Supply voltage S	V _{CC} -S	V _{CC} -S ≥ VS-*	6 to 13	V
Supply voltage P	V _{CC} -P*	V _{CC} -S ≥ VS-*	6 to 13	V

^{*:} The term "VS-*" refers to VS-SPD, VS-BTL, and VS-SLD.

Electrical Characteristics at Ta = 25 °C, $V_{CC} = VS\text{-SPD} = VS\text{-SLD} = VS\text{-BTL} = 8V$, VREF = 1.65V, $RF\text{-SPD} = 0.5\Omega$, unless especially specified.

Output On/Off Control Functions

1. Relationships Between Muting Inputs and Output States

MUTE SLED	Sled output
Н	ON
L	OFF

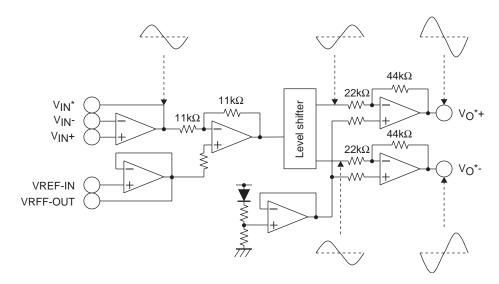

MUTE SLED	Loading driver output	
Н	ON	
L	OFF	

2. Relationship Between S/S and the Corresponding Output

MUTE SLED	Spindle BTL-AMP	
Н	ON	
L	OFF	

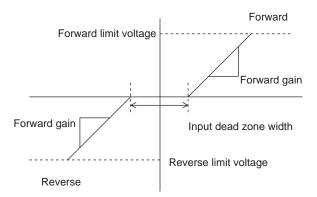

- *: The BTL amplifier and the loading driver input amplifier operate regardless of the MUTE inputs. The output on/off states are controlled only by muting the output amplifiers.
- *: When both the MUTE and S/S pins are low, the outputs go to the high-impedance state. However, note that the output amplifier gain setting feedback resistor is connected.

BTL Amplifier I/O Relationship

- * : The loading driver input operational amplifier is a voltage-follower circuit (V_{IN} and V_{IN}- are shorted together).
- * : To make the I/O relationship easier to see in figure 7, Block Diagram, the diagram is written as though gain is applied in the input amplifier. In the actual circuit, however, the gain occurs in the output amplifier.

Spindle and Sled Gain and Limiter

(SPINDLE)

RF resistor	Forward/reverse	I/O gain	
(Ω)	limiter current (A)	(A/V)	(V/V)
0.5	1.0	1.0	0.5
1.0	0.5	0.5	0.5

(SLED)

RF resistor	Forward/reverse	I/O gain	
(Ω)	limiter current (A)	(A/V)	(V/V)
0.5	0.50	0.50	0.25
1.0	0.25	0.25	0.25
