Product Specification

1. General Description

1-1. Description

The LB035Q02 is a Color Active Matrix Liquid Crystal Display with a white LED backlight assembly. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally white mode. This module is a diagonal 3.5 inch with the Landscape typed qVGA resolution.

The LB035Q02 is intended to support displays. [PND(Portable Navigation Device), PMP(Portable Multimedia Player) and others]

1-2. Block Diagram

Product Specification

1-3. Features

PARAMETER	SPECIFICATION	REMARK
Active Screen Size	3.5 inches	Diagonal
Outline Dimension	76.9[H] x 63.9[V] x 4.25t[D](with Touch Panel)	[mm]
Active Area	70.08[H] x 52.56[V]	[mm]
Number of dots	320[H] x RGB x 240[V]	-
Dot Pitch	0.073 x 0.219	[mm]
Pixel Arrangement	Stripe type	-
Display Mode	Transmissive	-
Display Color	Pseudo-16M	colors
Viewing Direction	6 o'clock	12 o'clock (good viewing)
Color Filter Array	RGB Vertical Stripe	-
Signal Interface	Digital RGB + SPI Interface	-
Weight	41g	-
Backlight	6 LEDs	Serial Type

Product Specification

2. Interface Connections

This LCD employs one interface connection for the operation of module, LED B/L and TSP.
 The pin configuration for the connector is shown in the table below.

(LCD Connector: FPC(60Pin 0.5mm pitch), Mating Connector: LD09T4-60NB(LS Cable) or equivalent

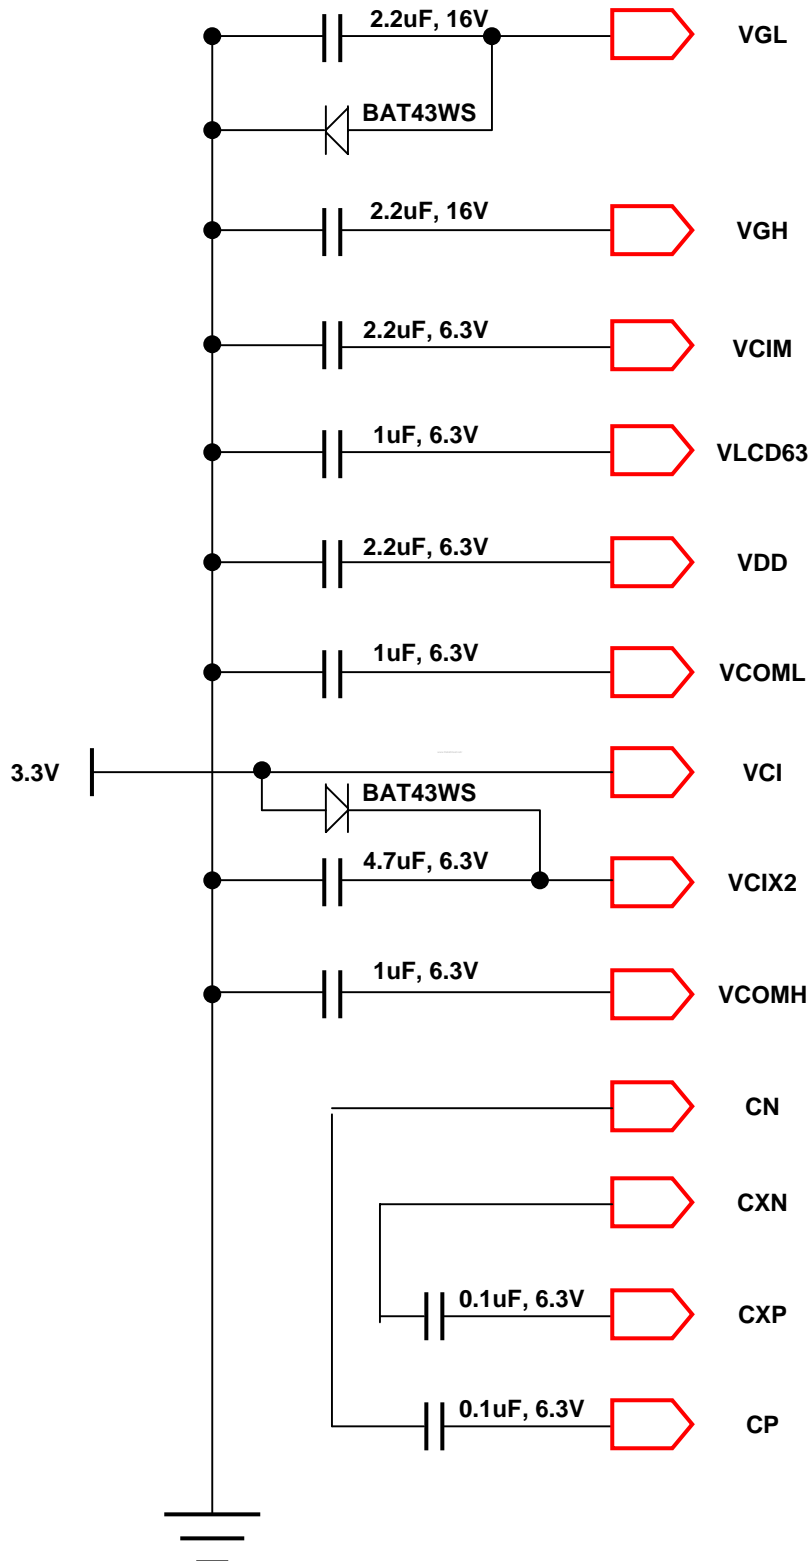

Pin	Symbol	Description	I/O	Remark
1	LED_C	LED_Cathode	I	
2	LED_A	LED_Anode	I	
3	GND	Ground	I	
4	X1	Right-electrode-differential analog	I

3. Absolute Maximum Ratings

If used the beyond absolute maximum ratings, this device can permanently be damaged.
It is strongly recommended to use this device at a condition for normal operation.

PARAMETER	SYMBOL	CONDITION	MIN.	MAX.	UNIT	REMARK
Power Supply Voltage	V _{CI}	T _a =25	-0.3	5.0	V	-
LED Forward Current	I _f	T _a =25	-	25	mA	[Note 3-1]
Operating Temperature	T _{OP}	-	-20	70		[Note 3-2]
Storage Temperature	T _{ST}	-	-30	80		[Note 3-2]

[Note 3-1] Applies for each LED individually

[Note 3-2] If fixed pattern is displayed for a minute, image sticjng may appear.

[Note 3-3] Temp. 60 , Humidity 90% RH Max

Temp. > 60 , absolute humidity shall be less than 90% RH at 60 .
No condensation > 40

Product Specification

[Note4-1] The permissible forward current of LED vary with environmental temperature.

Environmental temperature()

Product Specification

5. Touch Screen Panel Specifications

5-1. TSP Design Guide

- Avoid the bezel design as below. Because it can press the 'Active Area' of the touch panel

- We recommend the use of a buffer material between the touch panel and the bezel, and buffer material should be limited only on the adhesive tape area. If it is out of adhesive tape area, Touch Panel may occur a short.

<Prohibition & Operation>

1. Do not attach bezel inside of panel viewing area.
2. Prevent excessive force on the touch panel.
3. Do not use sharp things except finger or R0.8 stylus pen when operating.
This may cause scratches to the surface of touch panel.

Product Specification

- Use a cushion material between the touch panel and the bezel.
- Do not overlap and contact between the Case/Bezel and the TSP active area

[Note]

Area(a): Active area

The active area is guaranteed the position data detectable precision, operation force and other operations. It is strongly recommended to place the operation button or menu keys within the active area.

Area(b): Operation non-guaranteed area

This area does not guarantee a touch panel operation and its function. When this area is pressed, touch panel shows degradation of its performance and durability such as a pen sliding durability.

Area(c): Pressing prohibition area

The area which forbids pressing, because an excessive load is applied to a transparent electrode(ITO) and a serious damage is given to a touch panel function by pressing

Area(d): Non-Active area

The area does not activate even if pressed

Product Specification

▪ Measurement condition : Refer to the below “Test Equipment Set Up” and next two pages
[Test Equipment Set Up]

- Measuring Condition ;
 - Measuring surroundings : Dark Room
 - Measuring temperature : $T_a=25$
 - Adjust operating voltage to get optimum contrast at the center of the display.
 - Measured value at the center point of LCD panel after more than 10 minutes while backlight turning on.

[Note 6-1]

Measured on the center area of the panel by PHOTO RESEARCH photometer PR-880&PR650 or Equivalent

[Note 6-2]

Contrast ratio is defined as follows ;

$$\text{Contrast Ratio(CR)} = \frac{\text{Photo detector output with LCD being "white"}}{\text{Photo detector output with LCD being "black"}}$$

Product Specification

[Note 6-3]

Viewing angle range is defined as follows [PR-880];

[Note 6-4]

Response time is obtained by measuring the transition time of photo detector output, when input signals are applied so as to make the area "black" to and from "white".

Product Specification

[Note 6-5]

Luminance Uniformity= Maximum of 9points (~) / Minimum of 9points (~)
 Luminance Uniformity(%) = Minimum of 9points (~) / Maximum of 9points (~) x 100

8	Thermal Shock Test	-30 (0.5h) ~ 80 (0.5h) / 10cycle	-

[Note]

T_a = Ambient Temperature

In the standard condition, there shall be no practical problems that may affect the display function.

Result Evaluation Criteria

TFT- LCD Module should be at room temperature for 2 hours when the display quality test is over. There should be no particular change which might affect the practical display function and the display quality test should be conducted under normal operating condition.

13. Precautions

Please pay attention to the following when you use this TFT LCD module.

13-1. Mounting Precautions

- <1> You may mount a module using four corner sides.
- <2> You should consider the mounting structure so that uneven force(ex. Twisted stress) is not applied to the module.
And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- <3> Please attach a transparent protective plate to the surface in order to protect the polarizer.
Transparent protective plate should have sufficient strength in order to resist external force.
- <4> You should adopt radiation structure to satisfy the temperature specification.
- <5> Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- <6> Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.
Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics deteriorate the polarizer.)
- <7> When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzine. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone and toluene because they cause chemical damage to the polarizer.
- <7> Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- <8> Do not open the case because inside circuits do not have sufficient strength.
- <9> The metal case of a module should be contacted to electrical ground of your system.

13-2. Operating Precautions

- <1> The spike noise causes the disoperation of circuits. It should be lower than following voltage
 $V = \pm 200\text{mV}$ (Over and under shoot voltage)
- <2> Response time depends on the temperature.(In lower temperature, it becomes longer.)
- <3> Brightness depends on the temperature. (In lower temperature, it becomes lower.)
And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- <4> Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- <5> When fixed patterns are displayed for a long time, remnant image is likely to occur.
- <6> Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.

Product Specification

13-3. Electrostatic Discharge Control

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

13-4. Precautions For Strong Light Exposure

Strong light exposure causes degradation of polarizer and color filter.

13-5. Storage

When storing modules as spares for a long time, the following precautions are necessary.

- <1> Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- <2> The polarizer surface should not come in contact with any other object.
- <3> The warranty for storage of the color TFT-LCD module shall be in compliance with the Incoming Inspection standard.

13-6. Handling Precautions For Protection Film

- <1> When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- <2> The protection film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protection film against the polarizer during the time you peel off the film, the glue is apt to remain on the polarizer.
Please carefully peel off the protection film without rubbing it against the polarizer.
- <3> When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the polarizer after the protection film is peeled off.
- <4> You can remove the glue easily. When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
