RECORD OF REVISIONS

Revision No	Revision Date	Page	Description
0.0	Jan. 08. 2013	-	First Draft, Preliminary Specifications
0.1	Feb. 02. 2013	23	Change front view
		24	Change rear view

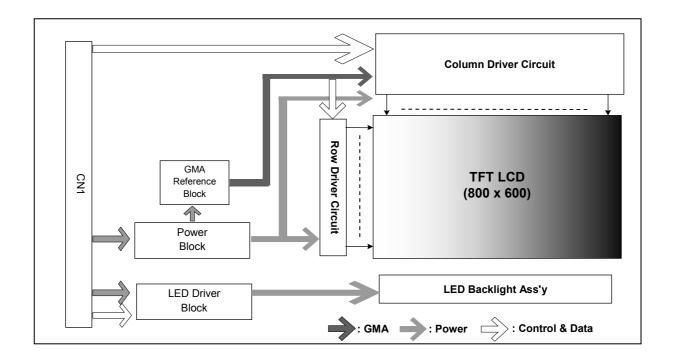

1. Summary

This module utilizes amorphous silicon thin film transistors and a 4:3 aspect ratio. The 10.4" active matrix liquid crystal display allows 262,144 colors to be displayed by LVDS interface is available.

2. Features

- Utilizes a panel with a 4:3 aspect ratio.
- The 10.4" screen produces a high resolution image that is composed of 480,000 pixel elements in a stripe arrangement.
- By adopting Wide viewing angle technology is employed.
- By adopting an active matrix drive, a picture with high contrast is realized.
- By adopting a high aperture panel, high transmittance color filter and high transmission polarizing plates, transmittance ratio is realized.
- Gray scale or the brightness of the sub-pixel color is determined with a 6-bit gray scale signal.
- By adopting LVDS interface, the module has a good performance in terms of EMI.

[Figure 1] Block diagram

Ver. 0.1 18 .Feb. 2013 4 / 31

3.General Features

Active Screen Size	10.4 inches (264.16mm) diagonal
Outline Dimension	224.5(H) x 172.0(V) x 6.8(D) mm(Typ.)
Pixel Pitch	0.264(H) mm x 0.264(V)mm
Pixel Format	800(H) By 600 (V) Pixels RGB stripes arrangement
Color Depth	6-bit, 262,144 colors
Luminance, White	250 cd/m2(Typ.)
Main Viewing Angle	6 o'clock
Power Consumption	Total 3.2W (Typ.) [Logic= 1.18W, Backlight= 2.02W (BL_DIM=100%)]
Weight	302.5g(Typ.) 317g(MAX)
Display Operating Mode	Transmissive mode, normally white
Surface Treatment	Anti-glare& hard coating(3H)

4. Absolute Maximum Ratings

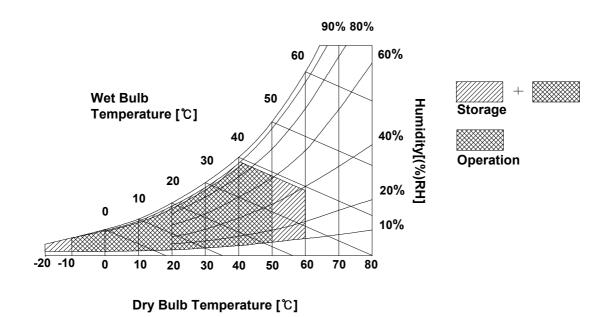

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

Table 1. ABSOLUTE MAXIMUM RATINGS

Parameter	Cumbal	Val	ues	Units	Notes	
Parameter	Symbol	Min	Max	UTIILS		
Power Input Voltage	VCC	-0.3	4.0	Vdc	at 25 ± 5°C	
Operating Temperature	Тор	-10	50	°C	1	
Storage Temperature	Hst	-20	60	°C	1	
Operating Ambient Humidity	Нор	10	90	%RH	1	
Storage Humidity	Hst	10	90	%RH	1	

Note: 1. Temperature and relative humidity range are shown in the figure below.

Wet bulb temperature should be 39°C Max, and no condensation of water.

Ver. 0.1 18 .Feb. 2013 6 / 31

5. Electrical Specifications

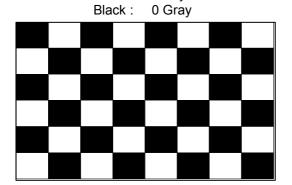

5-1. Electrical Characteristics

It requires two power inputs. One is employed to power for the LCD circuit. The other is used for the LED backlight.

Table 2. LCD DRIVING CIRCUIT ELECTRICAL CHARACTERISTICS

Davamete	Symbol		Value	I I m ! b	Nata			
Paramete		Min	Тур	Max	Unit	Note		
Power Supply Voltage	VLCD	3.0	3.3	3.6	٧			
Devices Committee Comment	Mosaic	ILCD	-	280	364	mA		
Power Supply Current	Black	ILCD	-	308	400	mA	1	
Power Consumption	PLCD	-	1.02	1.32	Watt			
Rush Current	Irush	-	-	1.2	Α	2		

- Note 1. The specified current and power consumption are under the VLCD=3.3V, Ta=25 ± 2°C, fv=60Hz condition whereas mosaic pattern(8 x 6) and white pattern are displayed and fv is the frame frequency.
 - 2. The duration of rush current is about 2ms and rising time of power input is 0.5ms (min.). (VLCD=3.3V, $Ta=25 \pm 2^{\circ}C$, fv=60Hz)
 - 3. The recommended operating conditions show the ranges in which the device can operate normally. Operation beyond the limit of the recommended operation conditions is not assured, even though operating conditions are within the limit of the maximum ratings.

White: 63 Gray

Black: 0 Gray

Black Pattern

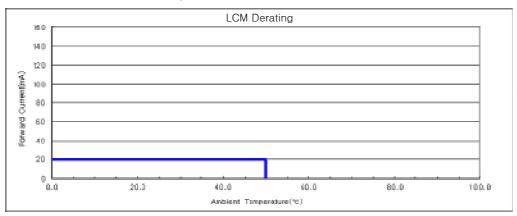

Table 3. BACKLIGHT ELECTRICAL CHARACTERISTICS

Par	Symbol Values				Unit	Note		
Pai	Syllibol	Min	Тур	Max	Oilit	Note		
Power Supply V	V BL	11	12	12.5	V	1		
Power Supply Current			IBL	-	168	218	mA	
Power Consump	tion		I	-	2.02	2.6	W	
	On/Off	On	Von	2	-	12	V	
		Off	Voff	-	0	0.5	V	
Input & Control	Brightness Adjust		Dimming	10		100	%	On Duty
Signal	BL_DIM Frequency		F _{PWM}	0.5	1	20	KHz	3
		uty Level	V _H	2.7	-	3.3	V	HIGH : on duty LOW : off duty
	(BL_DIM)		V _L	0.0	-	0.3	٧	
Life Time				30,000			Hrs	4

- Note 1. Electrical characteristics are determined after the unit has been 'ON' and stable for approximately 15 minutes at $25\pm2^{\circ}$ C. The specified current and power consumption are under the typical supply Input voltage 12V(BL_DIM=100%), it is total power consumption.
 - 2. The permissible forward current of LED vary with environmental temperature.

Ambient Temperature vs. Allowable Forward Current

- 3. PWM frequency should be optimized for minimal wavy and audible noise.
- 4. The life time is determined as the time at which brightness of LED is 50% compare to that of initial value at the typical LED current.

Ver. 0.1 18 .Feb. 2013 8 / 31

5-2. Interface Connections

This LCD module employs only one interface connections, 30-pin connector(CN1)

5-2-1. User Connector(CN1) Pin Configuration

The electronics interface connector is a model FI-XB30SL-HF10 (Manufactured by JAE)

Table 4-1. USER CONNECTOR(CN1) PIN CONFIGURATION

1. Connector

1.1 LCD : FI-XB30SL-HF10,

1.2 Mating:

FI-XB30SL (Manufactured by JAE) or Equivalent

Ver. 0.1 18 .Feb. 2013 9 / 31

Note 1. All GND(ground) pins should be connected together.

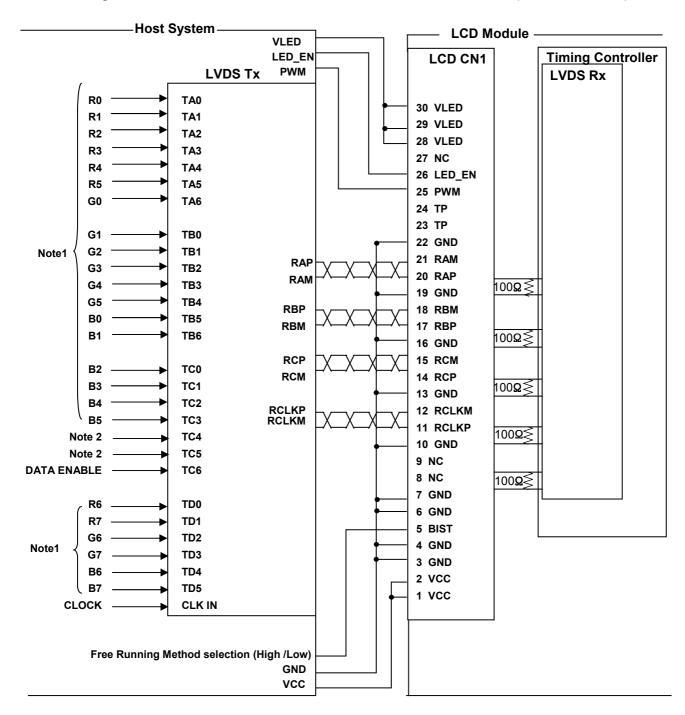

- 2. All VCC pins should be connected together.
- 3. All VBL pins should be connected together.
- 4. Make sure that NC pins should be floated.

5-2-2. Connection between Host system and LVDS receiver

If input data is 6bit, connect LSB 2bit of R,G,B to TD0~TD5 pin of LVDS Tx. Refer to FIG 1 for more detail.

Fig 1. REQUIRED SIGNAL ASSIGNMENT FOR LVDS TRANSMITTER(THC63LVDM83R)

Ver. 0.1 18 .Feb. 2013 11 / 31

5-3. Signal Timing Specifications

Table 5 shows the signal timing required at the input of the LVDS transmitter. All of the interface signal timings should be satisfied with the following specification for normal operation.

Table 5. SIGNAL TIMING CHARACTERISTICS

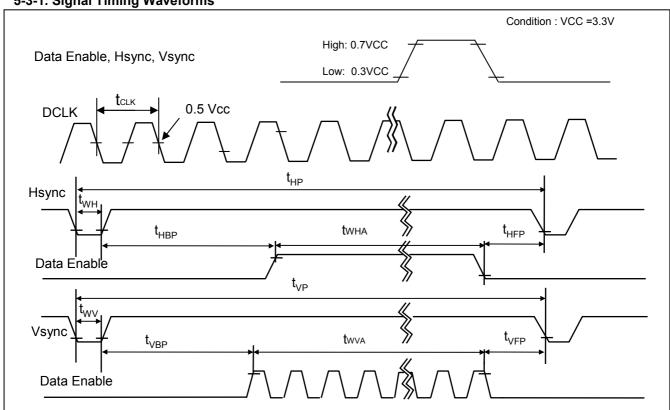

ITEM	Symbol		Min	Тур	Max	Unit	Note
DCLK	Period	tclk	25	25.9	27	ns	
DCLK	Frequency	-	37.0	38.5	40.0	MHz	
	Period	tHP	872	1024	1120		
Hsync	Width	twн	12	64	120	tclk	
	Horizontal Valid	tHV	800	800	800		
Varina	Period	tvp	606	625	730		
Vsync	Width	twv	1	6	24	thp	
	Vertical Valid	tVV	600	600	600		
	Horizontal back porch	thbp	30	88	120	tclk	
	Horizontal front porch	thfp	30	72	80	CCLIN	
Vertical back porch		tvbp	2	15	22	tup	
	Vertical front porch	tvfp	3	4	5	tHP	

Note:

- 1. DE Only mode operation. The input of Hsync & Vsync signal does not have an effect on LCD normal operation.
- 2. The performance of the electro-optical characteristics may be influenced by variance of the vertical refresh rates.

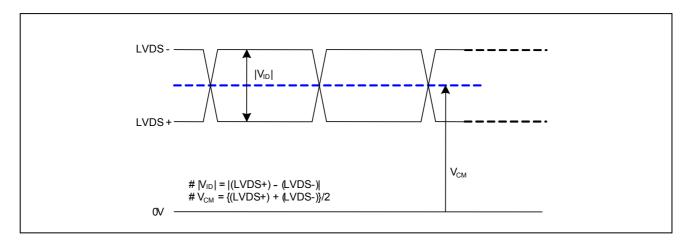

5-3-1. Signal Timing Waveforms

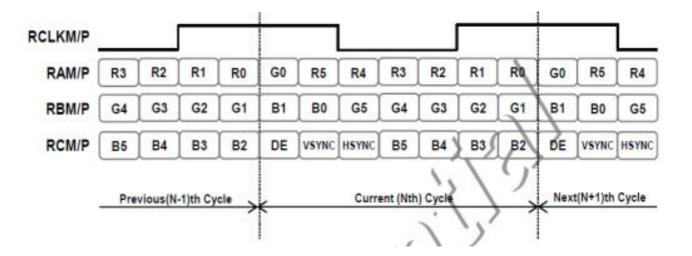

5-4. LVDS Signal Specifications

5-4-1. DC Specification

Parameter	Symbol	Min	Тур	Max	Unit	Notes
LVDS Differential Voltage	V _{ID}	200	-	600	mV	-
LVDS Input Common Mode Voltage	V _{CM}	V _{ID} /2	1.2	VCC- (V _{ID})/2	V	-
Positive-going Input Threshold Voltage	V _{TH}	-	-	100	mV	-
Negative-going Input Threshold Voltage	V _{TL}	-100	-	-	mV	-

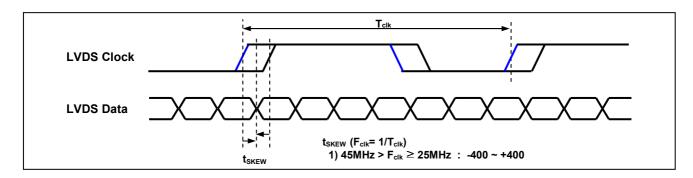

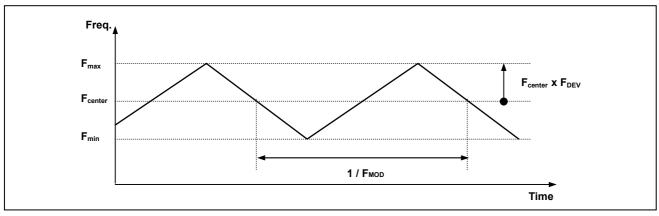

Ver. 0.1 18 .Feb. 2013 14 / 31

5-4-2. AC Specification

Parameter	Symbol	Min	Max	Unit	Notes
LVDS Clock to Data Skew Margin	t _{skew}	-400	+400	ps	$\begin{array}{c} 45 \text{MHz} > F_{\text{clk}} \geq \\ 25 \text{MHz} \end{array}$
Maximum deviation of input clock frequency during SSC	F _{DEW}	-	±3	%	-
Maximum modulation frequency of input clock during SSC	F _{MOD}	-	200	KHz	-

< Spread Spectrum >

5-5. Color Data Reference

The brightness of each primary color(red, green, blue) is based on the 6bit gray scale data input for the color. The higher binary input, the brighter the color. Table 6 provides a reference for color versus data input.

Table 6. COLOR DATA REFERENCE

		Input Color Data																	
	Color			RI	ΞD				(GRI	EEN					BL	UE		
	,0101	MSB				L	SB	MSB				L	SB	MSB				L	.SB

Ver. 0.1 18 .Feb. 2013 16 / 31

5-6. Power Sequence

For LCD's normal operation, it is recommended to keep below power supply sequence.

Power supply for LCD (VCC)

Interface Signal (Tx)

Power for LED(VLED)

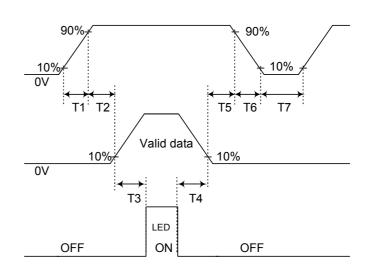

Table 9. POWER SEQUENCE TABLE

Parameter		Value		Units
	Min.	Тур.	Max.	
T ₁	-	-	10	(ms)
T ₂	-	-	50	(ms)
T ₃	600	-	-	(ms)
T ₄	200	-	-	(ms)
T ₅	0	-	50	(ms)
T ₆	-	-	10	(ms)
T ₇	1000	-	-	(ms)

Note)

- 1. Please avoid floating state of interface signal at invalid period.
- 2. When the interface signal is invalid, be sure to pull down the power supply for LCD VCC to 0V.
- 3. Lamp power must be turn on after power supply for LCD and interface signal are valid.

6. Electro-optical Characteristics

Electro-optical characteristics are determined after the unit has been 'ON' and stable in a dark environment at $25\pm2^{\circ}$ C. The values are specified at an approximate distance 50cm from the LCD surface at a viewing angle of and equal to 0°. Measured value at the center point of LCD panel after more than 15 minutes while backlight turning on.

It is presented additional information concerning the measurement equipment and method in FIG. 1.

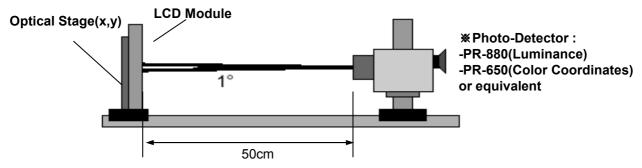

FIG. 3 Electro-optical Characteristic Measurement Equipment and Method

Table 8. ELECTRO-OPTICAL CHARACTERISTICS

Gray scale	e					2.2			7		

Ver. 0.1 18 .Feb. 2013 18 / 31

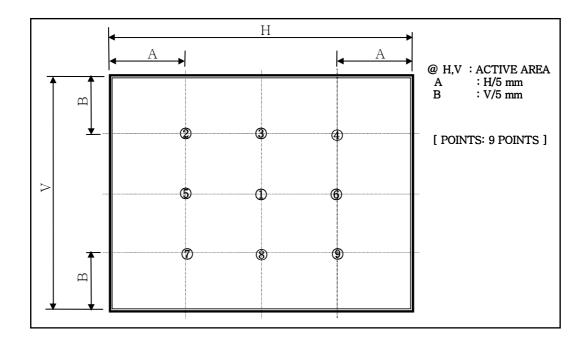

Note 1. Contrast Ratio(CR) is defined mathematically as:

It is measured at center 1-point.

- 2. Surface luminance are determined after the unit has been 'ON' and More than 15 Minute after lighting the backlight in a dark environment at 25±2°C. Surface luminance is the luminance value at center 1-point across the LCD surface 50cm from the surface with all pixels displaying white. For more information see the FIG. 4.
- 3. The Luminance Uniformity (δ_{WHITE}) is determined by measuring LN at each test position 1 through 9. The Luminance Uniformity (δ_{WHITE}) is defined as follows ;

Panel total variation (
$$\delta_{WHITE}$$
) =
$$\frac{Minimum(L1, L2, L3, L4...L9)}{Maximum(L1, L2, L3, L4...L9)}$$
 X 100%

For more information see the FIG. 4.

Note 4. Response time is obtained by measuring the transition time of photo detector output, when input signals are applied to make center point "black" and "white". For more information, see the FIG. 5.

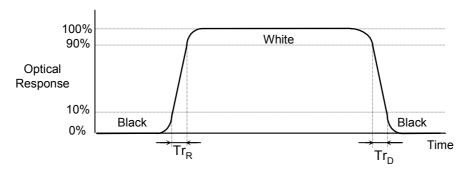

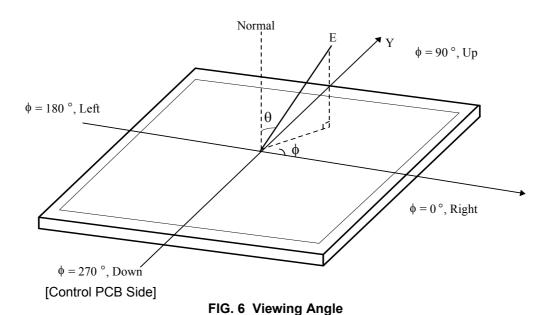

FIG. 5 Response Time

5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD module surface. For more information, see the FIG. 6.

6. Please see the Appendix V for more information about Color Coordinator

Note 7. Gray scale Specification

Gray Level	Luminance [%] (Typ)
LO	0.14
L3	0.66
L7	1.71
L11	3.01
L15	4.38
L19	6.56

11. PRECAUTIONS

Please pay attention to the following when you use this TFT LCD module.

11-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using specified mounting structure. (Details refer to the drawings)
- (2) You should consider the mounting structure so that uneven force(ex. Twisted stress) is not applied to the module.
 - And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach a transparent protective plate to the surface in order to protect the polarizer.

 Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics deteriorate the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzine. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.
- (10) The metal case of a module should be contacted to electrical ground of your system.

11-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage : $V=\pm 200 \text{mV}(\text{Over and under shoot voltage})$
- (2) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In higher temperature, it becomes lower.)
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.

11-3. ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

11-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

11-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.

 It is recommended that they be stored in the container in which they were shipped.

11-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) The protection film is attached to the bezel with a small masking tape or a double side tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.

11-7. PRECAUTIONS FOR ATTACHING THE TOUCH PANEL PROCESS

(1) When being touch panel laminate, Stems, Scratch, Stain and etc. can be occurred and then the operation should be with care. After being attached touch panel, It is not warranty for quality problems
