Product Specification

1. General description

LC185WH1-TLG1 is a Color Active Matrix Liquid Crystal Display with an integral Cold Cathode Fluorescent Lamp(CCFL) backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally white mode. It has a 18.5 inch diagonally measured active display area with WXGA resolution (768 vertical by 1366 horizontal pixel array) Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 8-bit gray scale signal for each dot, thus, presenting a palette of more than 16,7M colors with Advanced-FRC(Frame Rate Control).

It has been designed to apply the 8-bit 1-port LVDS interface.

It is intended to support LCD TV, PCTV where high brightness, super wide viewing angle, high color gamut, high color depth and fast response time are important.

General features

<u></u>	
Active screen size	18.51 inches (470.1mm) diagonal
Outline Dimension	430.4(H) x 254.6(V) x 13.0(D) mm(Typ.)
Pixel Pitch	0.10*RGB(H)mm x 0.30(V)mm
Pixel Format	1366 horiz. by 768 vert. pixels RGB stripe arrangement
Interface	LVDS 1Port
Color depth	16.7M colors
Luminance, white	250 cd/m² (Center 1Point, typ)
Viewing Angle (CR>10)	R/L 170(Typ.), U/D 160(Typ.)
Power Consumption	Total 13.66 W(Typ.), (3.6 W@V _{LCD} , 10.06 W@I _{BL} = 7.5 mA)
Weight	1370 g (Typ.)
Display operating mode	Transmissive mode, Normally White
Surface treatments	Hard coating (3H), Anti-glare treatment of the front polarizer

Product Specification

2. Absolute maximum ratings

The following items are maximum values which, if exceeded, may cause faulty operation or damage to the LCD module.

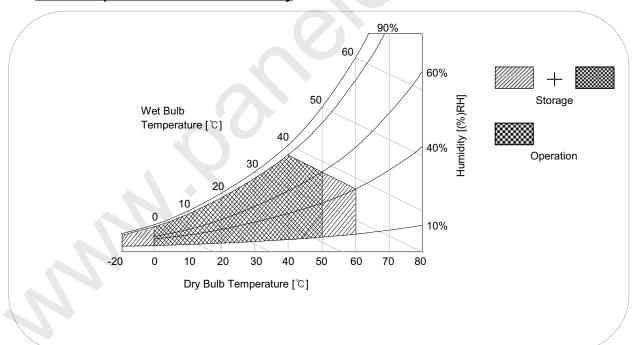

Table 1. Absolute maximum ratings

Downwater	Come had	Val	ues	l laite	Notes	
Parameter	Symbol	Min	Max	Units		
Power Supply Input Voltage	V _{LCD}	-0.3	+6.0	Vdc	At 25 ℃	
Operating Temperature	T _{OP}	0	50	°C		
Storage Temperature	T _{ST}	-20	60	°C	4	
Operating Ambient Humidity	H _{OP}	10	90	%RH	I	
Storage Humidity	H _{ST}	10	90	%RH		

Note: 1. Temperature and relative humidity range are shown in the figure below.

Wet bulb temperature should be 39 °C Max, and no condensation of water.

FIG. 2 Temperature and relative humidity

Ver. 1.0 5 / 32

Product Specification

3. Electrical specifications

3-1. Electrical characteristics

It requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input power for the CCFL/Backlight, is typically generated by an inverter. The inverter is an external unit to the LCDs.

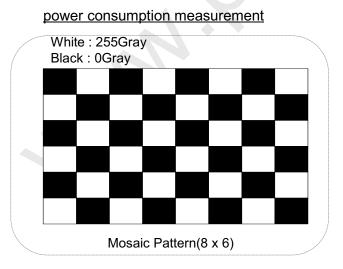

Table 2. Electrical characteristics

Parameter	Symbol	Symbol			Unit	Notes
Parameter	Symbol	Min	Тур	Max	Uniil	Notes
MODULE :						
Power Supply Input Voltage	V _{LCD}	4.5	5.0	5.5	Vdc	
Permissive Power Input Ripple	V _{LCD}	-	-	0.2	V	3
Dowar Supply Input Current	I _{LCD-MOSAIC}	-	720	936	mA	1
Power Supply Input Current	I _{LCD-BLACK}	-	900	1170	mA	2
Power Consumption	P _{LCD}	-	3.60	4.68	Watt	1
Inrush current	I _{RUSH}	-	(-	3.0	Α	4

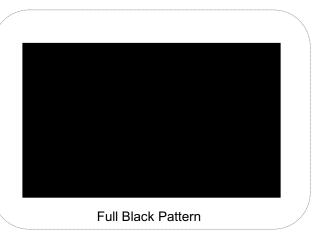

Note:

- 1. The specified current and power consumption are under the VLCD=5.0V, $25 \pm 2^{\circ}\text{C}$, f_V =60Hz condition whereas mosaic pattern(8 x 6) is displayed and f_V is the frame frequency.
- 2. The current is specified at the maximum current pattern.
- 3. Permissive power ripple should be measured under VCC=5.0V, $25^{\circ}C$, f_V (frame frequency)=60Hz condition and At that time, we recommend the bandwidth configuration of oscilloscope is to be under 20MHz.
- 4. The duration of rush current is about 5ms and rising time of power Input is 500us \pm 20%.

FIG.3 pattern for Electrical characteristics

power input ripple

Operating Current		I _{BL}	2.5	7.5	8.0	mA _{RMS}	1
Establishe	d Starting Voltage	Vs					1, 3
	at 25 °C				1100	V _{RMS}	
	at 0 °C				1400	V _{RMS}	
Operating	Frequency	f _{BL}	40	60	70	kHz	4
Discharge Stabilization Time		T _s	-	-	3	Min	1, 5
Power Consumption		P _{BL}		10.06	11.07	Watt	6
Life Time			50,000	-		Hrs	1, 7

Note:

The design of the inverter must have specifications for the lamp in LCD Assembly.

The performance of the Lamp in LCM, for example life time or brightness, is extremely influenced by the characteristics of the DC-AC inverter. So all the parameters of an inverter should be carefully designed so as not to produce too much leakage current from high-voltage output of the inverter. When you design or order the inverter, please make sure unwanted lighting caused by the mismatch of the lamp and the inverter (no lighting, flicker, etc) never occurs. When you confirm it, the LCD-Assembly should be operated in the same condition as installed in you instrument.

- Do not attach a conducting tape to lamp connecting wire. If the lamp wire attach to a conducting tape, TFT-LCD Module has a low luminance and the inverter has abnormal action. Because leakage current is occurred between lamp wire and conducting tape.
 - 1. Specified values are for a single lamp.
 - 2. Operating voltage is measured at 25 \pm 2°C. The variance of the voltage is \pm 10%.
 - 3. The voltage above V_S should be applied to the lamps for more than 1 second for start-up. (Inverter open voltage must be more than lamp starting voltage.)

Otherwise, the lamps may not be turned on. The used lamp current is the lamp typical current.

- 4. Lamp frequency may produce interface with horizontal synchronous frequency and as a result this may cause beat on the display. Therefore lamp frequency shall be as away possible from the horizontal synchronous frequency and from its harmonics in order to prevent interference.
- 5. Let's define the brightness of the lamp after being lighted for 5 minutes as 100%. $T_{\rm S}$ is the time required for the brightness of the center of the lamp to be not less than 95%.
- 6. The lamp power consumption shown above does not include loss of external inverter. The used lamp current is the lamp typical current. ($P_{BL} = V_{BL} \times I_{BL} \times N_{Lamp}$)
- 7. The life is determined as the time at which brightness of the lamp is 50% compared to that of initial value at the typical lamp current on condition of continuous operating at $25 \pm 2^{\circ}$ C.

Ver. 1.0 7 / 32

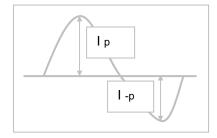

Product Specification

Note:

- 8. The output of the inverter must have symmetrical(negative and positive) voltage waveform and symmetrical current waveform (Unsymmetrical ratio is less than 10%). Please do not use the inverter which has unsymmetrical voltage and unsymmetrical current and spike wave. Requirements for a system inverter design, which is intended to have a better display performance, a better power efficiency and a more reliable lamp, are following. It shall help increase the lamp lifetime and reduce leakage current.
 - a. The asymmetry rate of the inverter waveform should be less than 10%.
 - b. The distortion rate of the waveform should be within $\sqrt{2} \pm 10\%$.
 - * Inverter output waveform had better be more similar to ideal sine wave.

* Asymmetry rate:

$$|I_{p} - I_{-p}| / I_{rms} \times 100\%$$

* Distortion rate

$$I_p (or I_{-p}) / I_{rms}$$

- 9. The inverter which is combined with this LCM, is highly recommended to connect coupling(ballast) condenser at the high voltage output side. When you use the inverter which has not coupling(ballast) condenser, it may cause abnormal lamp lighting because of biased mercury as time goes.
- 10.In case of edgy type back light with over 2 parallel lamps, input current and voltage wave form should be synchronized

Product Specification

FIG. 4 Connector diagram

Note:

- 1. NC: No Connection.
- All GND(ground) pins should be connected together and to Vss which should also be connected to the LCD's metal frame.
- 3. All V_{LCD} (power input) pins should be connected together.
- 4. Input Level of LVDS signal is based on the IEA 664 Standard.
- 5. PWM_OUT is a reference signal for inverter control.

 This PWM signal is synchronized with vertical frequency.

Its frequency is 3 times of vertical frequency, and its duty ratio is 50%. If the system don't use this pin, do not connect.

Ver. 1.0

Product Specification

The backlight interface connector is a model 35001HS-02LD manufactured by YEONHO.

The mating connector part number are 35001WR-02L(2pin) or equivalent.

The pin configuration for the connector is shown in the table below.

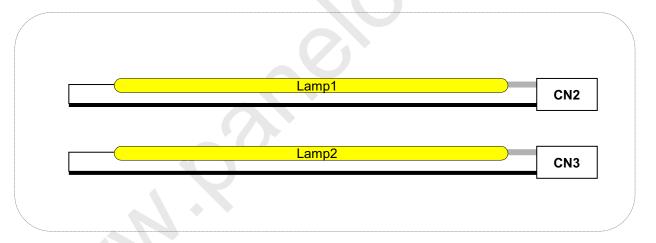

Table 5. Backlight connector pin configuration(CN2,CN3)

Pin	Symbol	Description	Notes
1	HV	High Voltage for Lamp	1
2	LV	Low Voltage for Lamp	2

Notes: 1. The high voltage power terminal is colored gray.

2. The low voltage pin color is black.

Note:

- 1. The input of HSYNC & VSYNC signal does not have an effect on normal operation (DE Only Mode). If you use spread spectrum of EMI, add some additional clock to minimum value for clock margin.
- 2. The performance of the electro-optical characteristics may be influenced by variance of the vertical refresh rate and the horizontal frequency
- 3. Timing should be set based on clock frequency.

Ver. 1.0 20 / 32

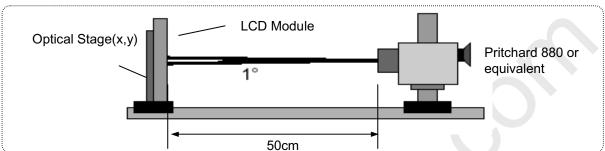

Product Specification

The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of Φ and θ equal to 0 °.

FIG. 7 presents additional information concerning the measurement equipment and method.

FIG. 7 Optical characteristic measurement equipment and method

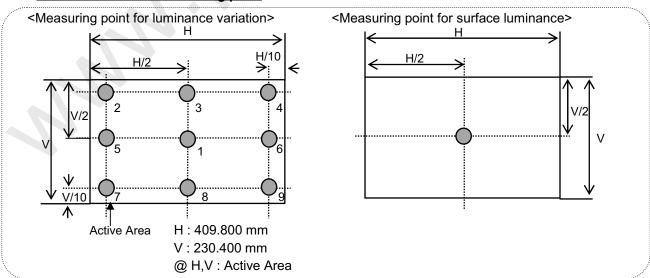

Notes:

1. Contrast ratio(CR) is defined mathematically as :It is measured at center point(1)

- Surface luminance is the luminance value at center 1 point(1) across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG 8.
- 3. The variation in surface luminance , $\delta_{\text{ WHITE}}$ is defined as

For more information see Figure 8.

FIG. 8 Luminance measuring point

Ver. 1.0 21 / 32

Product Specification

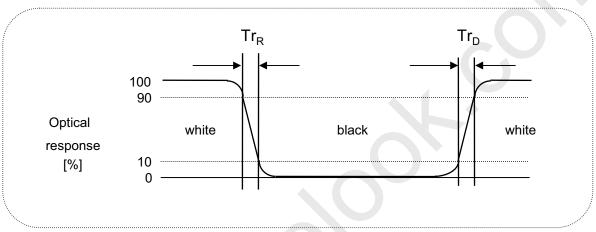

Notes:

4. Response time is the time required for the display to transition from black to white (Decay Time, Tr_D) and from white to black (Rise Time, Tr_R)

The sampling rate is 2,500 sample/sec. For additional information see FIG. 9.

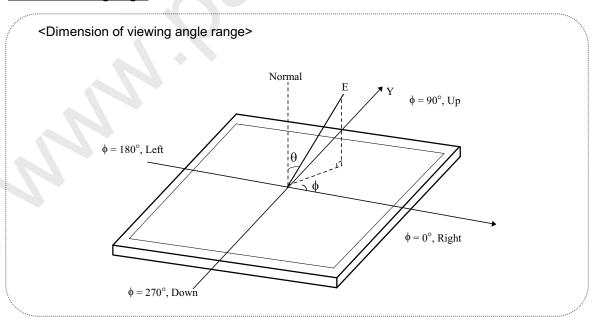

The response time is defined as the following figure and shall be measured by switching the input signal for each gray to gray.

FIG. 9 Response time

5. Viewing angle is the angle at which the contrast ratio is greater than 10 or 5. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG. 10.

FIG. 10 Viewing angle

Ver. 1.0 22 / 32

Product Specification

Notes:

6. Luminance Uniformity - angular – dependence (LR& TB)

TCO '03 Luminance uniformity – angular dependence, is the capacity of the VDU to present the same Luminance level independently of the viewing direction. The angular-dependent luminance uniformity is calculated as the ratio of maximum luminance to minimum luminance in the specified measurement areas.

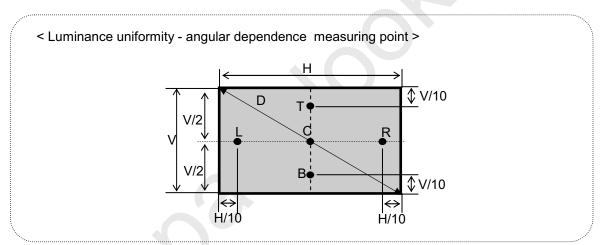

- Test pattern : 80% white pattern

- Test point : 2-point

- Test distance : D * 1.5 = 70.52cm

- Test method : $L_R = ((L_{max.+30deg.} / L_{min. +30deg.}) + (L_{max. -30deg.} / L_{min. -30deg.})) / 2$ $T_B = ((L_{max.+15deg.} / L_{min. +15deg.})$

FIG. 11 Luminance Uniformity angular dependence

7. Gray scale specification

Table 11. Gray scale

Gray level	Luminance [%] (Typ)
L0	0.10
L31	0.97
L63	4.43
L95	11.06
L127	21.13
L159	38.44
L191	52.50
L223	74.15
L255	100

Ver. 1.0 23 / 32

Product Specification

Notes:

8. Color grayscale linearity , $\Delta u \dot{} v \dot{}$ is defined as

$$\sqrt{(u'_A - u'_B)^2 + (v'_A - v'_B)^2}$$

Where indices A and B are the two gray levels found to have the largest color differences between them.

i.e. get the largest $\Delta u'$ and $\Delta v'$ of each 6pairs of u' and v' and calculate $\Delta u'v'$.

-Test pattern :

100% full white pattern with a test pattern as shown FIG.12 Squares of 40mm by 40mm in size, filled with 255, 225, 195, 165, 135 and 105 grayscale steps should be arranged in the center of the screen.

-Test method :

First gray step:

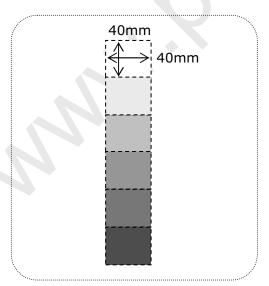

Move a square of 255 gray level should be moved into the center of the screen and measure luminance and u' and v' coordinates.

Next gray step:

Move a 255 gray square into the center and measure both luminance and u' and v' coordinates.

The same procedure shall then be repeated for gray steps 195, 165, 135 and 105.

FIG. 12 Color grayscale linearity

Product Specification

9. Precautions

Please pay attention to the followings when you use this TFT LCD module.

9-1. Mounting Precautions

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the Module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

9-2. Operating precautions

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage: V=±200mV(Over and under shoot voltage)
- (2) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.) And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.
- (7) Please do not give any mechanical and/or acoustical impact to LCM. Otherwise, LCM can not be operated its full characteristics perfectly.
- (8) A screw which is fastened up the steels should be a machine screw (if not, it causes metal foreign material and deal LCM a fatal blow)
- (9) Please do not set LCD on its edge.

Ver. 1.0 31 / 32

Product Specification

9-3. Electrostatic discharge control

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. Precautions for strong light exposure

Strong light exposure causes degradation of polarizer and color filter.

9-5. Storage

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.

9-6. Handling precautions for protection film

- (1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
