Product Specification

1. General Description

The LC216EXN is a Color Active Matrix Liquid Crystal Display with an integral Light Emitting Diode (LED) backlight system. The matrix employs a-Si Thin Film Transistor as the active element.

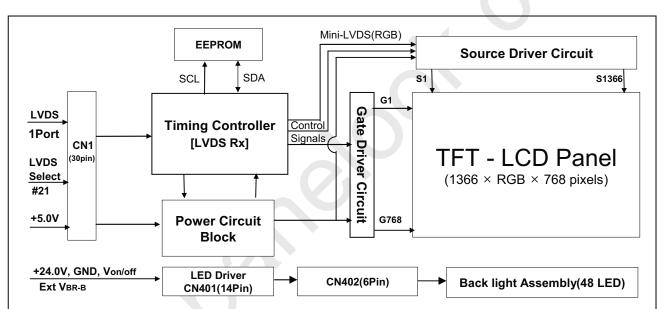

It is a transmissive display type which is operating in the normally black mode. It has a 21.6 inch diagonally measured active display area with WXGA resolution (768 vertical by 1366 horizontal pixel array).

Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arrayed in vertical stripes.

Gray scale or the luminance of the sub-pixel color is determined with a 8-bit gray scale signal for each dot, thus presenting a palette of more than 16.7M(6bit + A-FRC) colors.

It has been designed to apply the 8-bit 1-port LVDS interface.

It is intended to support LCD TV, PCTV where high brightness, super wide viewing angle, high color gamut, high color depth and fast response time are important.

General Features

| Active Screen Size | 21.6 inches(547.7mm) diagonal |
|-----------------------|--|
| Outline Dimension | 501(H) × 297(V) × 12.7(D) (Typ.) |
| Pixel Pitch | 0.1165 mm x 0.3495 mm |
| Pixel Format | 1366 horiz. by 768 vert. Pixels, RGB stripe arrangement |
| Color Depth | 8-bit(D), 16.7M colors |
| Luminance, White | 300 cd/m² (Center 1point) (Typ.) |
| Viewing Angle (CR>10) | Viewing angle free (R/L 178(Min.), U/D 178(Min.)) |
| Power Consumption | Total 23.65W (Typ.) (Logic=3.15W, LED Driver=20.5W EXTVBR-B=100%) |
| Weight | 1,420 (Typ.) |
| Display Mode | Transmissive mode, Normally black |
| Surface Treatment | Hard coating(3H), Anti-glare treatment of the front polarizer (Haze 13%) |

Product Specification

2. Absolute Maximum Ratings

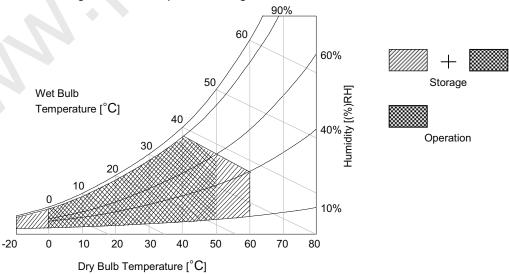

The following items are maximum values which, if exceeded, may cause faulty operation or damage to the LCD module.

Table 1. ABSOLUTE MAXIMUM RATINGS

| Parameter | | Symbol | Va | lue | Unit | Note |
|--------------------------------|--------------|------------|------|--------|-------|------|
| | | Syllibol | Min | Max | Oilit | |
| Dower Input Voltage | LCD Circuit | VLCD | -0.3 | +6.0 | VDC | |
| Power Input Voltage | Driver | VBL | -0.3 | + 27.0 | VDC | |
| Driver Control Voltage | ON/OFF | Voff / Von | -0.3 | +5.5 | VDC | 1 |
| | Brightness | VBR | 0.0 | +5.5 | VDC | |
| T-Con Option Selection Voltage | | VLOGIC | -0.3 | +4.0 | VDC | |
| Operating Temperature | | Тор | 0 | +50 | °C 0 | |
| Storage Temperature | | Тѕт | -20 | +60 | °C | 2,3 |
| Panel Front Temperature | | Tsur | - | +68 | °C | 4 |
| Operating Ambient Humidity | | Нор | 10 | 90 | %RH | 0.0 |
| Storage Humidity | age Humidity | | 10 | 90 | %RH | 2,3 |

Note 1. Ambient temperature condition (Ta = 25 ± 2 °C)

- 2. Temperature and relative humidity range are shown in the figure below. Wet bulb temperature should be Max 39°C, and no condensation of water.
- 3. Gravity mura can be guaranteed below 40°C condition.
- 4. The maximum operating temperatures is based on the test condition that the surface temperature of display area is less than or equal to 68°C with LCD module alone in a temperature controlled chamber. Thermal management should be considered in final product design to prevent the surface temperature of display area from being over 68°C. The range of operating temperature may degraded in case of improper thermal management in final product design.

Product Specification

3. Electrical Specifications

3-1. Electrical Characteristics

It requires two power inputs. One is employed to power for the LCD circuit. The other is used for the LED backlight and LED Driver circuit.

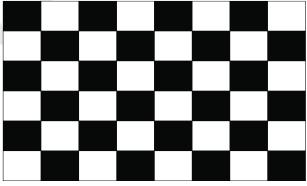

Table 2. ELECTRICAL CHARACTERISTICS

| Parameter | Symbol | | Value | | Unit | Note |
|---------------------|--------|-----|-------|------|------|------|
| i didilletei | Symbol | Min | Тур | Max | Onit | Note |
| Circuit : | | | | | | |
| Power Input Voltage | VLCD | 4.5 | 5.0 | 5.5 | VDC | |
| Dower Input Current | ILCD | - | 630 | 819 | mA | 1 |
| Power Input Current | ILCD | - | 780 | 1014 | mA | 2 |
| Power Consumption | PLCD | - | 3.15 | 4.1 | Watt | 1 |
| Rush current | Irush | - | - | 3.0 | А | 3 |

Notes : 1. The specified current and power consumption are under the V_{LCD} =5.0V, 25 \pm 2°C, f_V =60Hz condition, and mosaic pattern(8 x 6) is displayed and f_V is the frame frequency.

- 2. The current is specified at the maximum current pattern.
- 3. The duration of rush current is about 2ms and rising time of power input is 0.5ms (min.).

| LED: | | | | | | | | | |
| Life Time | | | 30,000 | | | Hrs | 3 | | |

Notes:

- 1. Electrical characteristics are determined after the unit has been 'ON' and stable for approximately 60 minutes at 25±2°C. The specified current and power consumption are under the typical supply Input voltage 24Vand VBR (ExtVBR-B: 100%), it is total power consumption.
- 2. Electrical characteristics are determined within 30 minutes at $25\pm2^{\circ}$ C. The specified currents are under the typical supply Input voltage 24V.
- 3. The life time is determined as the time which luminance of the LED is 50% compared to that of initial value at the typical LED current (ExtVBR-B:100%) on condition of continuous operating in LCM state at
- 4. LGD recommend that the PWM freq. is synchronized with two time harmonic of Vsync signal of system. Though PWM frequency is over 120Hz (max 252Hz), function of LED Driver is not affected.
- 5. The duration of rush current is about 200ms.
- 6. Even though inrush current is over the specified value, there is no problem if I2T spec of fuse is satisfied.

Ver 1.0 7/37

Product Specification

3-2. Interface Connections

This LCD module employs two kinds of interface connection, a 30-pin connector is used for the module electronics and 14-pin connector is used for the integral backlight system.

3-2-1. LCD Module

- LCD Connector(CN1): KDF71G-30S-1H(Hirose) or Compatible.
- Mating Connector : FI-X30C2L (Manufactured by JAE) or Equivalent

Table 4. MODULE CONNECTOR(CN1) PIN CONFIGURATION

| 28 | VLCD | Power Supply +5.0V | |
| 29 | VLCD | Power Supply +5.0V | |
| 30 | VLCD | Power Supply +5.0V | |

Notes: 1. All GND (Ground) pins should be connected together to the LCD module's metal frame.

- 2. All VLCD (Power input) pins should be connected together.
- 3. All Input levels of LVDS signals are based on the EIA 644 Standard.
- 4. Specific pin No. #1 is used for "No signal detection" of system signal interface. It should be GND for NSB (No Signal Black) during the system interface signal is not. If this pin is "H", LCD Module displays AGP (Auto Generation Pattern).

Ver 1.0 8/37

Product Specification

3-2-2. Backlight Inverter

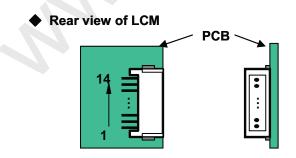

- LED Connector : SM14B-SRSS-TB (Manufactured by JST)
- Mating Connector : SHR-14V-S-B (With protrusions) or SHR-14V-S (Without protrusions) (Manufactured by JST)

Table 5. LED DRIVER CONNECTOR PIN CONFIGULATION

| 14510 0. EEE | · | TORT IN CONTINUE ATTOR | |
|--------------|----------|--------------------------|----------------|
| Pin No | Symbol | Description | Note |
| 1 | VBL | Power Supply +24.0V | |

| 12 | VON/OFF | Backlight ON/OFF control | |
| 13 | NC | No Connection | |
| 14 | EXTVBR-B | External PWM | 3 |

Notes: 1. GND should be connected to the LCD module's metal frame.

- 2. Normal: Low (under 0.7V) / Abnormal: High (upper 3.0V)
- 3. High: on duty / Low: off duty
- 4. Each impedance of pin #12 and 14 is over $50[K\Omega]$ and over $50[K\Omega]$.

Ver 1.0 9/37

Product Specification

3-3. Signal Timing Specifications

Table 6 shows the signal timing required at the input of the LVDS transmitter. All of the interface signal timings should be satisfied with the following specification for normal operation.

Table 6. TIMING TABLE (DE Only Mode)

| ı | TEM | Symbol | Min | Тур | Max | Unit | Note |
|------------|----------------|-----------------|--------------|--------------|----------------|------|------|
| | Display Period | t _{HV} | - | 1366 | - | tclk | |
| Horizontal | Blank | t _{HB} | 90 | 162 | 410 | tclk | |
| | Total | t _{HP} | 1456 | 1528 | 1776 | tclk | |
| | Display Period | t _{vv} | - | 768 | 4 | tHP | |
| Vertical | Blank | t _{VB} | 20 (126) | 22 (180) | 240 (295) | tHP | |
| | Total | t _{VP} | 788 (894) | 790 (948) | 1008 (1063) | tHP | |

| ITE | М | Symbol | Min | Тур | Max | Unit | Note |
|-----------|------------|------------------|------------|------------|------------|------|--|
| | DCLK | f _{CLK} | 63.0 | 72.4 | 80.0 | MHz | |
| | Horizontal | f _H | 45 | 47.4 | 55 | KHz | 2 |
| Frequency | Vertical | f _V | 57 (47) | 60 (50) | 63 (53) | Hz | 2 NTSC : 57~63Hz (PAL : 47~53Hz) |

Note:

- 1. The input of HSYNC & VSYNC signal does not have an effect on normal operation (DE Only Mode). If you use spread spectrum of EMI, add some additional clock to minimum value for clock margin.
- 2. The performance of the electro-optical characteristics may be influenced by variance of the vertical refresh rate and the horizontal frequency
- * Timing should be set based on clock frequency.

| T6 | _ | - | T2 | ms | 4 |
| T7 | 0.5 | - | - | s | |
| Т8 | 200 | <u>-</u> | - | ms | 6 |

Note: 1. Please avoid floating state of interface signal at invalid period.

- 2. When the power supply for LCD (VLCD) is off, be sure to pull down the valid and invalid data to 0V.
- 3. The T3 / T4 is recommended value, the case when failed to meet a minimum specification, abnormal display would be shown. There is no reliability problem.
- 4. If the on time of signals(Interface signal and user control signals) precedes the on time of Power(V_{LCD}), it will be happened abnormal display. When **T6** is NC status, **T6** doesn't need to be measured.
- 5. **T5** should be measured after the Module has been fully discharged between power off and on period.
- 6. It is recommendation specification that T8 has to be 100ms as a minimum value.

Product Specification

4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable in a dark environment at $25\pm2^{\circ}$ C. The values are specified at distance 50cm from the LCD surface at a viewing angle of Φ and θ equal to 0 °. FIG. 1 shows additional information concerning the measurement equipment and method.

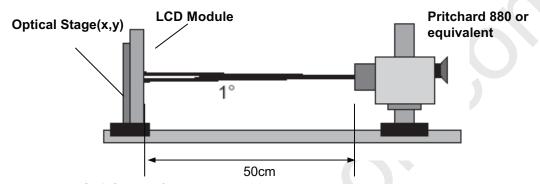

FIG. 1 Optical Characteristic Measurement Equipment and Method

Ver 1.0 17/37

Product Specification

Notes :1. Contrast Ratio (CR) is defined mathematically as :

CR = Surface Luminance at all white pixels

Surface Luminance at all black pixels

It is measured at center 1-point.

- 2. Surface luminance is determined after the unit has been 'ON' and 1Hour after lighting the backlight in a dark environment at 25±2°C. Surface luminance is the luminance value at center 1-point across the LCD surface 50cm from the surface with all pixels displaying white. For more information see the FIG. 2.
- 3. The variation in surface luminance , δ WHITE is defined as : $\delta \, \text{WHITE(5P)} = \text{Maximum}(L_{\text{on1}}, L_{\text{on2}}, \, L_{\text{on3}}, \, L_{\text{on4}}, \, L_{\text{on5}}) \, / \, \text{Minimum}(L_{\text{on1}}, L_{\text{on2}}, \, L_{\text{on3}}, \, L_{\text{on4}}, \, L_{\text{on5}})$ Where L_{on1} to L_{on5} are the luminance with all pixels displaying white at 5 locations . For more information, see the FIG. 2.
- 4. Response time is the time required for the display to transit from any gray to white (Rise Time, Tr_R) and from any gray to black (Decay time, Tr_D). For additional information see the FIG. 3.
 ※ G to G_{BW} Spec stands for average value of all measured points.
 Photo Detector: RD-80S / Field: 2°
- 5. G to G $_{\sigma}$ is Variation of Gray to Gray response time composing a picture

- 6. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD module surface. For more information, see the FIG. 4.
- 7. Gray scale specification
 Gamma Value is approximately 2.2. For more information, see the Table 11.

Table 11. GRAY SCALE SPECIFICATION

| Gray Level | Luminance [%] (Typ.) |
|------------|----------------------|

9. Precautions

Please pay attention to the followings when you use this TFT LCD module.

9-1. Mounting Precautions

- (1)You must mount a module using specified mounting holes (Details refer to the drawings).
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzine. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer. * There is no problem of Panel crack under 5kgf / φ10mm
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

9-2. Operating Precautions

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage : V=±200mV(Over and under shoot voltage)
- (2) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.) And in lower temperature, response time (required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.
- (7) Please do not give any mechanical and/or acoustical impact to LCM. Otherwise, LCM can't be operated its full characteristics perfectly.
- (8) A screw which is fastened up the steels should be a machine screw. (if not, it causes metallic foreign material and deal LCM a fatal blow)
- (9) Please do not set LCD on its edge.
- (10) The conductive material and signal cables are kept away from LED driver inductor to prevent abnormal display, sound noise and temperature rising.

Ver 1.0 27/37

Product Specification

9-3. Electrostatic Discharge Control

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. Precautions for Strong Light Exposure

Strong light exposure causes degradation of polarizer and color filter.

9-5. Storage

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.

 It is recommended that they be stored in the container in which they were shipped.
- (3) Storage condition is guaranteed under packing conditions.
- (4) The phase transition of Liquid Crystal in the condition of the low or high storage temperature will be recovered when the LCD module returns to the normal condition

9-6. Handling Precautions for Protection Film

- (1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
