LC320W01 Liquid Crystal Display

**Product Specification** 

# 1. General Description

The LC320W01 is a Color Active Matrix Liquid Crystal Display with an integral External Electrode Fluorescent Lamp(EEFL) backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally black mode. It has a 31.51 inch diagonally measured active display area with WXGA resolution (768 vertical by 1366 horizontal pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the luminance of the sub-pixel color is determined with a 8-bit gray scale signal for each dot, thus presenting a palette of more than 16.7M(true) colors.

It has been designed to apply the 8-bit 1-port LVDS interface.

It is intended to support LCD TV, PCTV where high brightness, super wide viewing angle, high color gamut, high color depth and fast response time are important.

### **General Features**

Active Screen Size	31.51 inches(800.4mm) diagonal
Outline Dimension	760.0 mm(H) x 450.0 mm(V) x 53.5 mm(D) (Typ.)
Pixel Pitch	170.25 µm x 510.75 µm x RGB
Pixel Format	1366 horiz. by 768 vert. pixels RGB stripe arrangement
Color Depth	8bit, 16,7 M colors
Luminance, White	500 cd/m <sup>2</sup> (Center 1 point) (Typ.)
Viewing Angle (CR>10)	Viewing angle free ( R/L 178(Typ.), U/D 178(Typ.))
Power Consumption	Total 87.96 Watt (Typ.) (Logic=3.96 W, Lamp=84W [I <sub>BL</sub> =90 mA] )
Weight	6,900 g (Тур.)
Display Operating Mode	Transmissive mode, normally black
Surface Treatment	Hard coating(3H), anti-glare treatment of the front polarizer

Ver. 1.0	Dec. 12, 2006	4 / 28

**Product Specification** 

# 2. Absolute Maximum Ratings

The following items are maximum values which, if exceeded, may cause faulty operation or damage to the LCD module.

### Table 1. ABSOLUTE MAXIMUM RATINGS

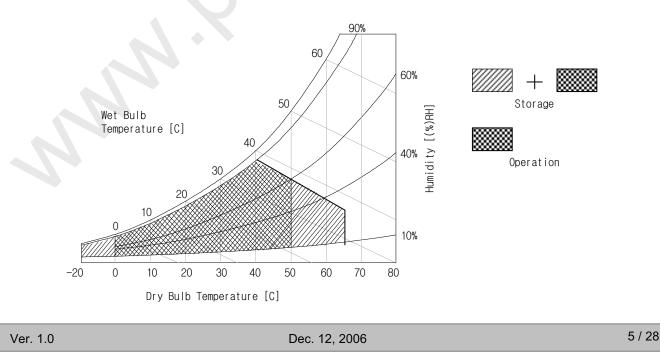

Parameter		Symbol	Valu	ue	Unit	Note	
Fc		Symbol	Min	Max	Offic	NOLE	
Power Input	LCM	VLCD	-0.3	+14.0	VDC	at 25 $\pm$ 2 °C	
Voltage	Backlight inverter	VBL	-0.3	+27.0	VDC		
ON/OFF Co	ntrol Voltage	VON/OFF	-0.3	+5.25	VDC		
Brightness C	Brightness Control Voltage		0	+5.25	VDC		
Operating To	emperature	Тор	0	+50	°C	1	
(Ambient Te	mp.)	Tsur	0	+65	°C	2	
Storage Ten	Storage Temperature		-20	+65	°C	1	
Operating Ambient Humidity		Нор	10	90	%RH	1	
Storage Humidity		Нѕт	10	90	%RH	1	

Notes :

1. Temperature and relative humidity range are shown in the figure below. Wet bulb temperature should be 39 °C Max, and no condensation.

2. Abnormal visual problems by panel front side surface temperature can be occurred in

- specific range (60 °C  $\sim$  65 °C), But materials(ex : polarizer) are not damaged permanently in this range, Tsur.
- 3. Ambient illuminance should be more than 10 lux.

# 3. Electrical Specifications

### **3-1. Electrical Characteristics**

It requires two power inputs. One is employed to power for the LCD circuit. The other input power for the EEFL/Backlight is to power inverter.

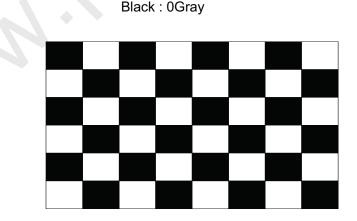

Parameter	Symbol	Value			Unit	Note	
	Gymbol	Min	Тур	Max	Offic	1010	
Circuit :	Circuit :						
Power Input Voltage	VLCD	11.4	12.0	12.6	VDC		
Permissible Input Ripple Voltage	Vrp	-	-	200	mVp-p		
Power Input Current	ILCD	231	330	429	mA	1	
Power Input Current		308	440	572	mA	2	
Power Consumption	PLCD	2.77	3.96	5.15	Watt	1	
Rush current	Irush	-	-	3.0	A	3	

Note : 1. The specified current and power consumption are under the  $V_{LCD}$ =12.0V, 25 ± 2°C, f<sub>v</sub>=60Hz condition whereas mosaic pattern(8 x 6) is displayed and f<sub>v</sub> is the frame frequency.

2. The current is specified at the maximum current pattern.(White pattern)

3. The duration of rush current is about 2ms and rising time of power input is 1ms (min.).

White : 255Gray

Pulse Duty(PWM)		High Level	2.5	-	5.0	V <sub>DC</sub>	
(Burst mode)		Low Level	0.0	-	0.6	V <sub>DC</sub>	
Lamp :							
Life Time			50,000	60,000		Hrs	2

Notes :

1. The specified current and power consumption are under the typical supply Input voltage, 24.0V. The ripple voltage of the power supply input voltage is under 0.5 Vp-p.

Inrush current of the power supply input current is under +10% of the typical current

- Specified values are for a single lamp which is aligned horizontally.
   The life is determined as the time at which luminance of the lamp is 50% compared to that of initial value at the typical lamp current on condition of continuous operating at 25 ± 2°C.
   Specified value is when lamp is aligned horizontally.
- 3. Electrical characteristics are determined after the unit has been 'ON' and stable for approximately 2Hrs in a dark environment at 25 °C $\pm$  2°C.
- 4. Burst mode is controlled by TV system. High Level of Ext-PWM is min 2.5V. On duty ratio of output.
- 5. Rush current is determined at turning on after the unit has been 'OFF' for 2Hrs at 25 $\pm$ 2 °C

6. Synchronize PWM by triple with Vsync signal of system.

Ver. 1.0	Dec. 12, 2006	7 / 28

**Product Specification** 

### **3-2. Interface Connections**

This LCD module employs two kinds of interface connection, a 30-pin connector is used for the module electronics and two 12-pin connectors are used for the integral backlight system.

#### 3-2-1. LCD Module

- LCD Connector(CN1) : FI-X30SSL-HF (Manufactured by JAE)
- Mating Connector : FI-30C2L (Manufactured by JAE)

#### Table 3. MODULE CONNECTOR(CN1) PIN CONFIGURATION

Pin No.	Symbol	Description	Note
1	VLCD	Power Supply +12.0V	
2	VLCD	Power Supply +12.0V	
3	VLCD	Power Supply +12.0V	
4	VLCD	Power Supply +12.0V

25	RD+	LVDS Receiver Signal(+)	
26	GND	Ground	
27	VBR_OUT	VBR output form LCD module	
28	VBR_EXT	External VBR input from System to LCD module	
29	GND	Ground	
30	AGP	AGP	2

Note: 1. If the pin no. 9 is Ground, Interface format is "LG", and if the pin no. 9 is Vcc(3.3V), Interface format is "DISM". See page 9 and 10.

2. The pin no. 30 is necessary for LCD test. When LVDS signals are abnormal operation more than 3-Vsync times and power 12V is supplied, 'Open' or 'Vcc' : LCD operate itself some test patterns.(AGP – Auto Generation Pattern) 'Ground' : LCD operate itself a black pattern. (NSB – No Signal Black) LPL recommend 'Ground' for NSB.
2. All CND, Ground' prince descent to a support of the second second

- 3. All GND (ground) pins should be connected together, which should be also connected to the LCD module's metal frame.
- 4. All VLCD (power input) pins should be connected together.
- 5. Input Levels of LVDS signals are based on the IEA 664 Standard.

LC320W01 Liquid Crystal Display

# 4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and for 30 minutes in a dark environment at  $25\pm2^{\circ}$ C. The values are specified at an approximate distance 50cm from the LCD surface at a viewing angle of  $\Phi$  and  $\theta$  equal to 0 °.

It is presented additional information concerning the measurement equipment and method in FIG. 1.

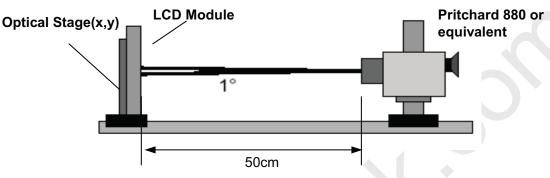

FIG. 1 Optical Characteristic Measurement Equipment and Method

#### Table 11. OPTICAL CHARACTERISTICS

#### **Product Specification**

Note :

1. Contrast Ratio(CR) is defined mathematically as :

Contrast Ratio =  $\frac{\text{Surface Luminance with all white pixels}}{\text{Surface Luminance with all black pixels}}$ It is measured at center 1-point.

- 2. Surface Luminance( $L_{WH}$ ) is the luminance value at center 1-point across the LCD surface 50cm from the surface with all pixels displaying white. For more information see the FIG. 2.
- 3. The variation of surface luminance ,  $\delta$  WHITE is defined as :

 $\delta \text{ WHITE(5P)} = \text{Maximum}(L_{\text{on1}}, L_{\text{on2}}, L_{\text{on3}}, L_{\text{on4}}, L_{\text{on5}}) / \text{Minimum}(L_{\text{on1}}, L_{\text{on2}}, L_{\text{on3}}, L_{\text{on4}}, L_{\text{on5}})$ 

Where  $L_{on1}$  to  $L_{on5}$  are the luminance with all pixels displaying white at 5 locations . For more information, see the FIG. 2.

- 4. Response time is the time required for the display to transition from G(N) to G(M) (Rise Time,  $Tr_R$ ) and from G(M) to G(N) (Decay Time,  $Tr_D$ ). For additional information see the FIG. 3. (N<M)
- 5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD module surface. For more information, see the FIG. 4
- 6. Gray scale specification Gamma Value is approximately 2.2. For more information, see the Table 12.

Cravel avel		Luminance [%] (Typ	)
Gray Level	Min.	Тур.	Max.
LO		0.18	0.30
L15	0.15	0.27	1.00
L31	0.35	1.00	2.40
L47	1.00	2.40	4.60
L63	2.00	4.60	7.60
L79	3.90	7.60	11.40
L95	6.60	11.40	16.80
L111	10.40	16.00	22.60
L127	14.70	21.60	29.50
L143	20.10	28.00	37.40
L159	26.20	35.40	45.70
L175	33.40	43.70	54.50
L191	41.70	53.00	64.80

# 6. Reliability

#### Table 14. ENVIRONMENT TEST CONDITION

No.	Test Item	Condition
1	High temperature storage test	Ta= 60°C, 500h
2	Low temperature storage test	Ta= -20°C, 500h
3	High temperature operation test	Ta= 50°C, 80%RH, 500h Ta= 60°C, 500h(2000h)
4	Low temperature operation test	Ta= 0°C, 500h(1000h)
5	Heat cycle test	Ta= -20 °C ~ 60 °C, 30min/5min/30min, 100cycles
6	Soldering heat cycle test	Ta= -40 °C ~ 80 °C, 30min/5min/30min, 200cycles
7	Vibration test (non-operating)	Wave form : random Vibration level : 1.0Grms Bandwidth : 10-500Hz Duration : X,Y,Z, 10 min One time each direction
8	Shock test (non-operating)	Shock level : 100Grms Waveform : half sine wave, 2ms Direction : $\pm X$ , $\pm Y$ , $\pm Z$ One time each direction
9	ESD test	Condition : 150pF, 330 ohm Case , air Evaluation : ± 15kV
10	Humidity storage test	Ta= 40 °C, 70%RH, 240h

Note : After Reliability test, display function should be kept as the result evaluation.

LC320W01 Liquid Crystal Display

# 9. Precautions

Please pay attention to the followings when you use this TFT LCD module.

# 9-1. Mounting Precautions

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer.

Transparent protective plate should have sufficient strength in order to the resist external force.

- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzine. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

### 9-2. Operating Precautions

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :  $V=\pm 200 \text{mV}(\text{Over and under shoot voltage})$
- (2) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.)

And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.

- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.
- (7) Please do not give any mechanical and/or acoustical impact to LCM. Otherwise, LCM can't be operated its full characteristics perfectly.
- (8) A screw which is fastened up the steels should be a machine screw. (if not, it causes metallic foreign material and deal LCM a fatal blow)
- (9) Please do not set LCD on its edge.

Product Specification

LC320W01 Liquid Crystal Display

### 9-3. Electrostatic Discharge Control

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

# 9-4. Precautions for Strong Light Exposure

Strong light exposure causes degradation of polarizer and color filter.

### 9-5. Storage

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.It is recommended that they be stored in the container in which they were shipped.

# 9-6. Handling Precautions for Protection Film

- (1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ionblown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
