# **1. General Description**

The LC490DUJ is a Color Active Matrix Liquid Crystal Display with an integral the Source PCB and Gate implanted on Panel (GIP). The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally black mode. It has a 48.50 inch diagonally measured active display area with WUXGA resolution (1080 vertical by 1920 horizontal pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the luminance of the sub-pixel color is determined with a 8-bit gray scale signal for each dot. Therefore, it can present a palette of more than 16.7M(true) colors.

It is intended to support LCD TV, PCTV where high brightness, super wide viewing angle, high color gamut, high color depth and fast response time are important.

# **General Features**

Active Screen Size	48.50 inch (1232.0mm) diagonal
Outline Dimension	1085.5(H) x 617.7 (V) x 1.4 mm(D) (Typ.)
Pixel Pitch	0.5593 mm x 0.5593 mm
Pixel Format	1920 horiz. by 1080 vert. Pixels, RGB stripe arrangement
Color Depth	8-bit, 16.7 M colors
Drive IC Data Interface	Source D-IC : 8-bit EPI, gamma reference voltage, and control signals Gate D-IC : Gate In Panel
Transmittance (With POL)	7.0 %(TBD)
Viewing Angle (CR>10)	Viewing angle free (R/L 178 (Min.), U/D 178 (Min.))
Weight	2.06Kg(Typ.)[TBD]
Display Mode	Transmissive mode, Normally black
Surface Treatment (Top)	Hard coating(3H), Anti-glare treatment of the front polarizer (Haze 1%(Typ.))

### 2. Absolute Maximum Ratings

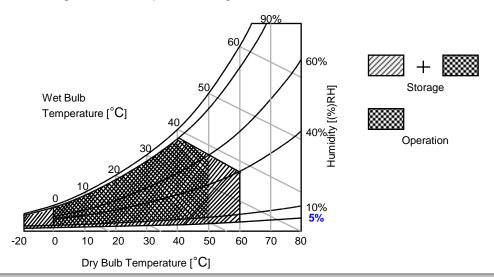

The following items are maximum values which, if exceeded, may cause faulty operation or permanent damage to the LCD module.

Table 1. ABSOLUTE MAXIMUM RATINGS

Para	Parameter		Va	lue	Unit	Note
Fala		Symbol	Min	Max	Unit	Note
Power Input Voltage	LCD Circuit	VLCD	-0.3	+14.0	VDC	1
T-Con Option Selection Voltage		VLOGIC	-0.3	+4.0	Vdc	
Operating Temperature	Operating Temperature			+50	°C	2.2
Storage Temperature(wi	thout packing)	Tst	-20	+60	°C	2,3
Panel Front Temperature		TSUR	-	+68	°C	4
Operating Ambient Humi	Нор	10	90	%RH		
Storage Humidity		Hs⊤	5	90	%RH	2,3

Note1. Ambient temperature condition (Ta = 25  $\pm$  2  $^\circ\text{C}$  )

- 2. Temperature and relative humidity range are shown in the figure below. Wet bulb temperature should be Max 39°C, and no condensation of water.
- 3. Gravity mura can be guaranteed below 40°C condition.
- 4. The maximum operating temperatures is based on the test condition that the surface temperature of display area is less than or equal to 68°C with LCD module alone in a temperature controlled chamber. Thermal management should be considered in final product design to prevent the surface temperature of display area from being over 68°C. The range of operating temperature may be degraded in case of improper thermal management in final product design.

## 3. Electrical Specifications

# **3-1. Electrical Characteristics**

### Table 2. ELECTRICAL CHARACTERISTICS

Para	motor	Symbol		Value	Unit	Note	
Parameter		Symbol	Min	Тур	Max	Onit	Note
Circuit :							
Power Input Voltage		VLCD	10.8	12.0	13.2	Vdc	
Power Input Current		ILCD	-	370(TBD)	480(TBD)	mA	1
		ILCD	-	490(TBD)	640(TBD)	mA	2
T-CON Option	Input High Voltage	V <sub>IH</sub>	2.7	-	3.6	VDC	
Selection Voltage	Input Low Voltage	V <sub>IL</sub>	0	-	0.7	VDC	
Power Consumption		PLCD	-	4.5(TBD)	5.9(TBD)	Watt	1
Rush current		Irush	-	-	5.0	А	3

Note 1. The specified current and power consumption are under the V<sub>LCD</sub>=12.0V, Ta=25  $\pm$  2°C, f<sub>V</sub>=60Hz condition, and mosaic pattern(8 x 6) is displayed and f<sub>V</sub> is the frame frequency.

- 2. The current is specified at the maximum current pattern.
- 3. The duration of rush current is about 2ms and rising time of power input is 0.5ms (min.).
- 4. Ripple voltage level is recommended under  $\pm 5\%$  of typical voltage

Mosaic Pattern(8 x 6)

### 3-2. Interface Connections

This LCD module employs two kinds of interface connection, 51-pin connector is used for the module electronics.

### 3-2-1. LCD Module

- LCD Connector(CN1): FI-RE51S-HF(manufactured by JAE) or GT05P-51S-H38(manufactured by LSM) or IS050-C51B-C39(manufactured by UJU)
- Mating Connector : FI-R51HL(JAE) or compatible

### Table 3. MODULE CONNECTOR(CN1) PIN CONFIGURATION

No	Symbol	Description	No	Symbol	Description
1	NC or GND	No Connection or Ground	27	NC	No connection
2	NC	No Connection (Note 4)	28	R2AN	SECOND LVDS Receiver Signal (A-)
3	NC	No Connection (Note 4)	29	R2AP	SECOND LVDS Receiver Signal (A+)
4	NC	No Connection (Note 4)	30	R2BN	SECOND LVDS Receiver Signal (B-)
5	NC	No Connection (Note 4)	31	R2BP	SECOND LVDS Receiver Signal (B+)
6	NC	No Connection (Note 4)	32	R2CN	SECOND LVDS Receiver Signal (C-)
7	LVDS Select	'H' =JEIDA , 'L' or NC = VESA	33	R2CP	SECOND LVDS Receiver Signal (C+)
8	NC	No Connection (Note 4)	34	GND	Ground
9	NC	No Connection (Note 4)	35	R2CLKN	SECOND LVDS Receiver Clock Signal(-)
10	NC	No Connection (Note 4)	36	R2CLKP	SECOND LVDS Receiver Clock Signal(+)
11	GND	Ground	37	GND	Ground
12	R1AN	FIRST LVDS Receiver Signal (A-)	38	R2DN	SECOND LVDS Receiver Signal (D-)
13	R1AP	FIRST LVDS Receiver Signal (A+)	39	R2DP	SECOND LVDS Receiver Signal (D+)
14	R1BN	FIRST LVDS Receiver Signal (B-)	40	NC	No connection
15	R1BP	FIRST LVDS Receiver Signal (B+)	41	NC	No connection
16	R1CN	FIRST LVDS Receiver Signal (C-)	42	NC or GND	No Connection or Ground
17	R1CP	FIRST LVDS Receiver Signal (C+)	43	NC or GND	No Connection or Ground
18	GND	Ground	44	GND	Ground (Note 5)
19	R1CLKN	FIRST LVDS Receiver Clock Signal(-)	45	GND	Ground
20	R1CLKP	FIRST LVDS Receiver Clock Signal(+)	46	GND	Ground
21	GND	Ground	47	NC	No connection
22	R1DN	FIRST LVDS Receiver Signal (D-)	48	VLCD	Power Supply +12.0V
23	R1DP	FIRST LVDS Receiver Signal (D+)	49	VLCD	Power Supply +12.0V
24	NC	No connection	50	VLCD	Power Supply +12.0V
25	NC	No connection	51	VLCD	Power Supply +12.0V
26	NC or GND	No Connection or Ground	-	-	-

Note 1. All GND(ground) pins should be connected together to the LCD module's metal frame.

- 2. All VLCD (power input) pins should be connected together.
- 3. All Input levels of LVDS signals are based on the EIA 644 Standard.
- 4. #1~#6 & #8~#10 NC (No Connection): These pins are used only for LGD (Do not connect)
- 5. Specific pin No. **#44** is used for "No signal detection" of system signal interface. It should be GND for NSB(No Signal Black) during the system interface signal is not.

If this pin is "H", LCD Module displays AGP(Auto Generation Pattern).

### 3-3. Signal Timing Specifications

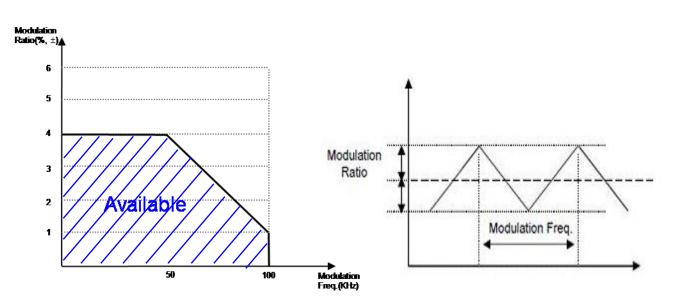

Table 4 shows the signal timing required at the input of the LVDS transmitter. All of the interface signal timings should be satisfied with the following specification for normal operation.

ITE	м	Symbol	Min	Тур	Мах	Unit	notes
Horizontal	Display Period	tH∨	960	960	960	tCLK	1920/2
	Blank	tнв	100	140	240	tCLK	1
	Total	tHP	1060	1100	1200	tCLK	
	Display Period	tvv	1080	1080	1080	Lines	
Vertical	Blank	tvв	20	45	300	Lines	1
	Total	tvp	1100	1125	1380	Lines	

Table 4. TIMING TABLE for NTSC & PAL (DE Only Mode)

ITEM		Symbol	Min	Тур	Max	Unit	notes
	DCLK	fclk	60.00	74.25	78.00	MHz	
Frequency	Horizontal	fн	57.3	67.5	70	KHz	2
	Vertical	f∨	47	60	63	Hz	2

- notes: 1. The input of HSYNC & VSYNC signal does not have an effect on normal operation (DE Only Mode). If you use spread spectrum of EMI, add some additional clock to minimum value for clock margin.
  - 2. The performance of the electro-optical characteristics may be influenced by variance of the vertical refresh rate and the horizontal frequency
  - Spread Spectrum Rate (SSR) for 50KHz ~ 100kHz Modulation Frequency(FMOD) is calculated by (7 – 0.06\*Fmod), where Modulation Frequency (FMOD) unit is KHz.
     LVDS Receiver Spread spectrum Clock is defined as below figure
  - X Timing should be set based on clock frequency.

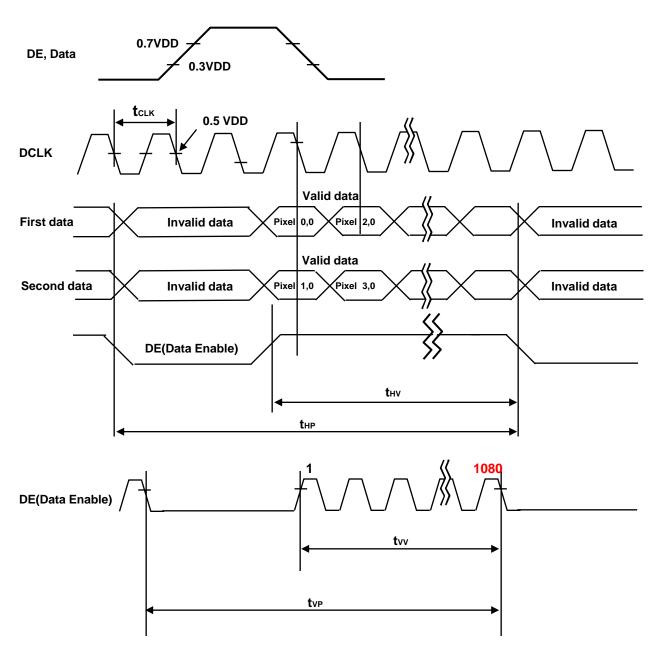

※ Please pay attention to the followings when you set Spread Spectrum Rate(SSR) and Modulation Frequency(FMOD)

- 1. Please set proper Spread Spectrum Rate(SSR) and Modulation Frequency (FMOD) of TV system LVDS output.
- 2. Please check FOS after you set Spread Spectrum Rate(SSR) and Modulation Frequency(FMOD) to avoid abnormal display. Especially, harmonic noise can appear when you use Spread Spectrum under FMOD 30 KHz.

### 3-4. LVDS Signal Specification

### 3-4-1. LVDS Input Signal Timing Diagram

### 3-4-2. LVDS Input Signal Characteristics

### 1) DC Specification

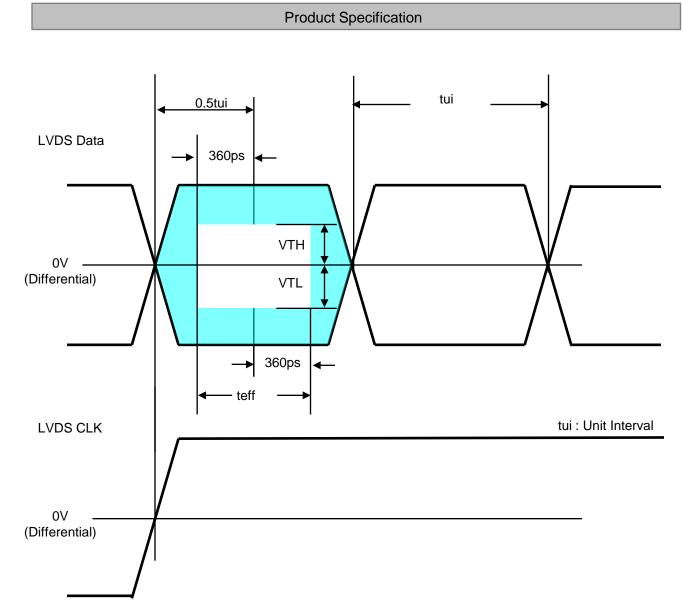

### 2) AC Specification

notes 1. All Input levels of LVDS signals are based on the EIA 644 Standard.

2. LVDS Differential Voltage is defined within  $\mathbf{t}_{\rm eff}$ 

\* This accumulated waveform is tested with differential probe

### Table 6. COLOR DATA REFERENCE

### 3-7. Power Sequence

### 3-6-1. LCD Driving circuit

### Table 7. POWER SEQUENCE

Devementer		L Incit	Natas		
Parameter	Min	Unit	Notes		
T1	0.5	-	20	ms	1
T2	0	-	-	ms	2
Т3	400	-	-	ms	3
T4	100	-	-	ms	3
T5	1.0	-	-	s	4
T6	0	-	T2	ms	5
T7	0	-	-	ms	6

- 1. Even though T1 is over the specified value, there is no problem if I2T spec of fuse is satisfied.
  - 2. If T2 is satisfied with specification after removing LVDS Cable, there is no problem.
  - 3. The T3 / T4 is recommended value, the case when failed to meet a minimum specification, abnormal display would be shown. There is no reliability problem.
  - 4. T5 should be measured after the Module has been fully discharged between power off and on period.
  - 5. If the on time of signals (Interface signal and user control signals) precedes the on time of Power (V<sub>LCD</sub>), it will be happened abnormal display. When T6 is NC status, T6 doesn't need to be measured.
  - 6. It is recommendation specification that T7 has to be 0ms as a minimum value.
  - ※ Please avoid floating state of interface signal at invalid period.
  - When the power supply for LCD (VLCD) is off, be sure to pull down the valid and invalid data to 0V.

# 4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable in a dark environment at 25±2°C. The values are specified at 50cm from the LCD surface at a viewing angle of  $\Phi$  and  $\theta$  equal to 0 °. FIG. 1 shows additional information concerning the measurement equipment and method.

Ta= 25±2°C, V<sub>LCD</sub>=12.0V, fV=60Hz, Dclk=74.25MHz,

### **Table 8. OPTICAL CHARACTERISTICS**

Back Light : LGD B/L

Parameter		Symbol		Value		Unit	Note

y axis, down (∳=270°)		θd	89	-	-		
Gray Scale			-	-	-		7

h

- Note : 1.. Contrast Ratio(CR) is defined mathematically as :
  - CR(Contrast Ratio) = Maximum CRn (n=1, 2, 3, 4, 5)
    - Surface Luminance at position n with all white pixels
  - CRn = Surface Luminance at position n with all black pixels n = the Position number(1, 2, 3, 4, 5). For more information, see FIG 2.
  - 2. Response time is the time required for the display to transit from any gray to white (Rise Time,  $Tr_{R}$ ) and from any gray to black (Decay time, Tr<sub>D</sub>). For additional information see the FIG. 3. % G to G<sub>BW</sub> Spec stands for average value of all measured points. Photo Detector : RD-80S / Field : 2 °
  - in Mariatian of Crowto Cro 3. G to G

G to G 
$$_{\sigma}$$
 is Variation of Gray to Gray response time composing a picture

G to G (
$$\sigma$$
) =  $\sqrt{\frac{\Sigma(Xi - u)^2}{N}}$  Xi = Individual Data  
u = Data average  
N : The number of E

4. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis

w

h С is normal to the LCD module surface. For more information, see the FIG. 4.

# 9. Packing

### 9-1. Packing Form

- a) Package quantity in one Pallet : 70 pcs
- b) Pallet Size : 1390 mm(W) X 890 mm(D) X 1080 mm(H)

### **10. Precautions**

Please pay attention to the followings when you use this TFT LCD module.

# **10-1. Handling Precautions**

- (1) Please attach the surface transparent protective film to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (2) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (3) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics are detrimental to the polarizer.)
- (4) After removing the protective film, when the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzine.
  - Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (5) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (6) Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly. Panel ground path should be connected to metal ground.
- (7) Please make sure to avoid external forces applied to the Source PCB and D-IC during the process of handling or assembling the TV set. If not, It causes panel damage or malfunction.
- (8) Panel and BLU should be protected from the static electricity. If not, it causes IC damage.
- (9) Do not pull or fold the source D-IC which connect the source PCB and the panel.
- (10) Panel(board ass'y) should be put on the BLU structure precisely to avoid mechanical impact.
- (11) FFC Cable should be connected between System board and Source PCB correctly.
- (12) Mechanical structure for backlight system should be designed for sustaining board ass'y safely.
- (13) Surface temperature of the Source D-IC should be controlled under 100°C with TV Set status. If not, problems such as IC damage or decrease of lifetime could occur.

### **10-2. Operating Precautions**

- (1) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- (2) Brightness depends on the temperature. (In lower temperature, it becomes lower.) And in lower temperature, Stable time(required time that brightness is stable after turned on) becomes longer
- (3) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (4) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (5) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.

26 /37

# 10-3. Protection Film

- (1) Please keep attaching the protection film before assembly.
- (2) Please peel off the protection film slowly.
- (3) Please peel off the protection film just like shown in the Fig.1
- (4) Ionized air should be blown over during the peeling.
- (5) Source PCB should be connected to the ground when peel off the protection film.
- (6) The protection film should not be contacted to the source D-IC during peeling it off.

# 10-4. Storage Precautions

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Temperature : 5 ~ 40 °C
- (2) Humidity : 35 ~ 75 %RH
- (3) Period : 6 months
- (4) Control of ventilation and temperature is necessary.
- (5) Please make sure to protect the product from strong light exposure, water or moisture. Be careful for condensation.
- (6) Please keep the modules at a circumstance shown below Fig. 2

# **10-5. Packing Precautions**

Product assembled into module should be stored in the Al-bag(cover case).

# 10-6. Operating condition guide

- (1) The LCD product should be operated under normal conditions. Normal condition is defined as below;
  - Temperature : 5 ~ 40  $^\circ\!\mathrm{C}$  , normal humidity
  - Display pattern : continually changing pattern (Not stationary)
- (2) If the product will be used in extreme conditions such as high temperature, display patterns or operation time etc..,

It is strongly recommended to contact LGD for Qualification engineering advice. Otherwise, its reliability and function may not be guaranteed. Extreme conditions are commonly found at Airports, Transit Stations, Banks, Stock market, and Controlling systems. The LCD product should be applied by global standard environment. (refer ETSI EN 300, IEC 60721)
