

## Four-Bit Single-Chip Microcontrollers with 4, 6, and 8 KB of On-Chip ROM

### Preliminary

### Overview

The LC66354C, LC66356C, and LC66358C are 4-bit CMOS microcontrollers that integrate on a single chip all the functions required in a system controller, including ROM, RAM, I/O ports, a serial interface, comparator inputs, three-value inputs, timers, and interrupt functions. These three microcontrollers are available in a 42-pin package.

These products differ from the earlier LC66358A Series and LC66358B Series in the power-supply voltage range, the operating speed, and other points.

### Features and Functions

- On-chip ROM capacities of 4, 6, and 8 kilobytes, and an on-chip RAM capacity of  $512 \times 4$  bits.
- Fully supports the LC66000 Series common instruction set (128 instructions).
- I/O ports: 36 pins
- 8-bit serial interface: two circuits (can be connected in cascade to form a 16-bit interface)
- Instruction cycle time: 0.92 to 10  $\mu$ s (at 2.5 to 5.5 V)
  - For the earlier LC66358A Series: 1.96 to 10  $\mu$ s (at 3.0 to 5.5 V) and 3.92 to 10  $\mu$ s (at 2.2 to 5.5 V)
  - For the earlier LC66358B Series: 0.92 to 10  $\mu$ s (at 3.0 to 5.5 V)
- Powerful timer functions and prescalers
  - Time limit timer, event counter, pulse width measurement, and square wave output using a 12-bit timer.
  - Time limit timer, event counter, PWM output, and square wave output using an 8-bit timer.
  - Time base function using a 12-bit prescaler.
- Powerful interrupt system with 8 interrupt factors and 8 interrupt vector locations.
  - External interrupts: 3 factors/3 vector locations
  - Internal interrupts: 5 factors/5 vector locations
- Flexible I/O functions  
Comparator inputs, three-value inputs, 20-mA drive outputs, 15-V high-voltage pins, and pull-up/open-drain options.
- Optional runaway detection function (watchdog timer)
- 8-bit I/O functions
- Power saving functions using halt and hold modes.
- Packages: DIP42S, QIP48E (QFP48E)

### • Evaluation LSIs

- LC66599 (evaluation chip) + EVA85/800-TB6630X
- LC66E308 (on-chip EPROM microcontroller) used together.

### Package Dimensions

unit: mm

#### 3025B-DIP42S

unit: mm

We recommend the use of reflow-soldering techniques to solder-mount QFP packages.

Please consult with your Sanyo representative for details on process conditions if the package itself is to be directly immersed in a dip-soldering bath (dip-soldering techniques).

|--|---|--|
| System differences<br>Hardware wait time (number of cycles)<br>when hold mode is cleared           | 65536 cycles<br>About 64 ms at 4 MHz (T <sub>cyc</sub> = 1 μs)  | 16384 cycles<br>About 16 ms at 4 MHz (T <sub>cyc</sub> = 1 μs)   |
| Value of timer 0 after a reset<br>(Including the value after hold mode is cleared)                 | Set to FF0.   | Set to FFC.  |
| Difference in major features<br>Operating power-supply voltage and<br>operating speed (cycle time) | <ul style="list-style-type: none"> <li>LC66304A/306A/308A<br/>4.0 to 6.0 V/0.92 to 10 μs</li> <li>LC66E308/P308<br/>4.5 to 5.5 V/0.92 to 10 μs</li> </ul> | <ul style="list-style-type: none"> <li>2.5 to 5.5 V/0.92 to 10 μs</li> <li>LC6635XA<br/>2.2 to 5.5 V/3.92 to 10 μs</li> <li>3.0 to 5.5 V/1.96 to 10 μs</li> <li>LC6635XB<br/>3.0 to 5.5 V/0.92 to 10 μs</li> </ul> |

- Note: 1. An RC oscillator cannot be used with the LC66354C, LC66356C, and LC66358C.  
 2. There are other differences, including differences in output currents and port input voltages.  
 For details, see the data sheets for the LC66308A, LC66E308, and LC66P308.  
 3. Pay close attention to the differences listed here when using the LC66E308 and LC66P308 for evaluation.

| TEST   | I      | CPU test pin<br>This pin must be connected to $V_{SS}$ during normal operation.   |  |  |                     |
| $V_{DD}$<br>$V_{SS}$                         |        | Power supply pins   |  |  |                     |

Note: Pull-up MOS type: The output circuit includes a MOS transistor that pulls the pin up to  $V_{DD}$ .

CMOS output: Complementary output.

OD output: Open-drain output.

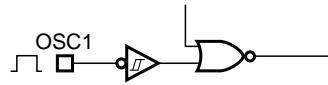

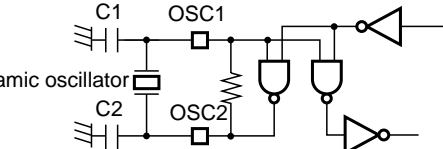

## User Options

### 1. Port 0 and 1 output level at reset option

The output levels at reset for I/O ports 0 and 1, in independent 4-bit groups, can be selected from the following two options.

| Option                  | Conditions and notes                             |
|-------------------------|--|
| 1. Output high at reset | The four bits of ports 0 or 1 are set in a group |
| 2. Output low at reset  | The four bits of ports 0 or 1 are set in a group |

### 2. Oscillator circuit options

| Option                | Circuit   | Conditions and notes                  |
|-----------------------|---|---------------------------------------|
| 1. External clock     |  | The input has Schmitt characteristics |
| 2. Ceramic oscillator |  |                                       |

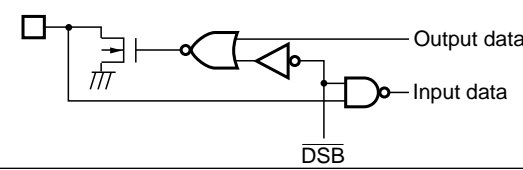

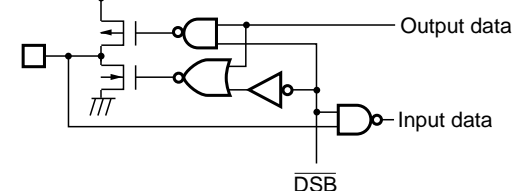

Note: There is no RC oscillator option.

### 3. Watchdog timer option

A runaway detection function (watchdog timer) can be selected as an option.

### 4. Port output type options

- The output type of each bit (pin) in ports P0, P1, P2, P3 (except for the P33/ $\overline{\text{HOLD}}$  pin), P4, P5, P6, and PC can be selected individually from the following two options.

| Option                                   | Circuit  | Conditions and notes  |
|--|--|---|
| 1. Open-drain output                     |  | The port P2, P3, P5, and P6 inputs have Schmitt characteristics.  |
| 2. Output with built-in pull-up resistor |  | The port P2, P3, P5, and P6 inputs have Schmitt characteristics.<br>The CMOS outputs (ports P2, P3, P6, and PC) and the pull-up MOS outputs (P0, P1, P4, and P5) are distinguished by the drive capacity of the p-channel transistor. |

- The port PD comparator input and the port PE three-value input are selected in software.

## Specifications

### Absolute Maximum Ratings at $T_a = 25^\circ\text{C}$ , $V_{SS} = 0\text{ V}$

| Parameter                   | Symbol              | Conditions   | Ratings                | Unit             | Note |   |
|-----------------------------|---------------------|--|------------------------|------------------|------|---|
| Maximum supply voltage      | $V_{DD\text{ max}}$ | $V_{DD}$   | -0.3 to +7.0           | V                |      |   |
| Input voltage               | $V_{IN1}$           | P2, P3 (except for the P33/HOLD pin), P4, P5, and P6             | -0.3 to +15.0          | V                | 1    |   |
|                             | $V_{IN2}$           | All other inputs   | -0.3 to $V_{DD} + 0.3$ | V                | 2    |   |
| Output voltage              | $V_{OUT1}$          | P2, P3 (except for the P33/HOLD pin), P4, P5, and P6             | -0.3 to +15.0          | V                | 1    |   |
|                             | $V_{OUT2}$          | All other inputs   | -0.3 to $V_{DD} + 0.3$ | V                | 2    |   |
| Output current per pin      | $I_{ON}$            | P0, P1, P2, P3 (except for the P33/HOLD pin), P4, P5, P6, and PC | 20                     | mA               | 3    |   |
|                             | $-I_{OP1}$          | P0, P1, P4, P5   | 2                      | mA               | 4    |   |
|                             | $-I_{OP2}$          | P2, P3 (except for the P33/HOLD pin), P6, and PC                 | 4                      | mA               | 4    |   |
| Total pin current           | $\Sigma I_{ON1}$    | P0, P1, P2, P3 (except for the P33/HOLD pin), P40, and P41       | 75                     | mA               | 3    |   |
|                             | $\Sigma I_{ON2}$    | P5, P6, P42, P43, PC   | 75                     | mA               | 3    |   |
|                             | $\Sigma I_{OP1}$    | P0, P1, P2, P3 (except for the P33/HOLD pin), P40, and P41       | 25                     | mA               | 4    |   |
|                             | $\Sigma I_{OP2}$    | P5, P6, P42, P43, PC   | 25                     | mA               | 4    |   |
| Allowable power dissipation | $P_d\text{ max}$    | $T_a = -30\text{ to }+70^\circ\text{C}$                          | DIP42S                 | 600              | mW   |   |
|                             |                     |  | QFP48E                 | 430              | mW   | 5 |
| Operating temperature       | $T_{opr}$           |  | -30 to +70             | $^\circ\text{C}$ |      |   |
| Storage temperature         | $T_{stg}$           |  | -55 to +125            | $^\circ\text{C}$ |      |   |

Note: 1. Applies to pins with open-drain output specifications. For pins with other than open-drain output specifications, the ratings in the pin column for that pin apply.

2. For the oscillator input and output pins, levels up to the free-running oscillation level are allowed.

3. Sink current

4. Source current (Applies to pins with pull-up output and CMOS output specifications.)

5. We recommend the use of reflow soldering techniques to solder mount QFP packages.

Please consult with your Sanyo representative for details on process conditions if the package itself is to be directly immersed in a dip-soldering bath (dip-soldering techniques).

**Allowable Operating Ranges at Ta = -30 to +70°C, V<sub>SS</sub> = 0 V, V<sub>DD</sub> = 2.5 to 5.5 V, unless otherwise specified.**

| Parameter                                    | Symbol                                | Conditions   | min                 | typ | max                   | Unit     | Note |
|--|---------------------------------------|--|---------------------|-----|-----------------------|----------|------|
| Operating supply voltage                     | V <sub>DD</sub>                       | V <sub>DD</sub> : 0.92 T <sub>cyc</sub> 10 μs  | 2.5                 |     | 5.5                   | V        |      |
| Memory retention supply voltage              | V <sub>DDH</sub>                      | V <sub>DD</sub> : During hold mode   | 1.8                 |     | 5.5                   | V        |      |
| Input high-level voltage                     | V <sub>IH1</sub>                      | P2, P3 (except for the P33/HOLD pin), P4, P5, and P6: N-channel output transistor off  | 0.8 V <sub>DD</sub> |     | +13.5                 | V        | 1    |
|  | V <sub>IH2</sub>                      | P33/HOLD, RES, OSC1: N-channel output transistor off   | 0.8 V <sub>DD</sub> |     | V <sub>DD</sub>       | V        | 2    |
|  | V <sub>IH3</sub>                      | P0, P1, PC, PD, PE: N-channel output transistor off  | 0.8 V <sub>DD</sub> |     | V <sub>DD</sub>       | V        | 3    |
|  | V <sub>IH4</sub>                      | PE: With 3-value input used, V <sub>DD</sub> = 3.0 to 5.5 V  | 0.8 V <sub>DD</sub> |     | V <sub>DD</sub>       | V        |      |
| Mid-level input voltage                      | V <sub>IM</sub>                       | PE: With 3-value input used, V <sub>DD</sub> = 3.0 to 5.5 V  | 0.4 V <sub>DD</sub> |     | 0.6 V <sub>DD</sub>   | V        |      |
| Common-mode input voltage range              | V <sub>CMM1</sub>                     | PD0, PC2: When the comparator input is used, V <sub>DD</sub> = 3.0 to 5.5 V  | 1.5                 |     | V <sub>DD</sub>       | V        |      |
|  | V <sub>CMM2</sub>                     | PD1, PD2, PD3, PC3: When the comparator input is used, V <sub>DD</sub> = 3.0 to 5.5 V  | V <sub>SS</sub>     |     | V <sub>DD</sub> - 1.5 | V        |      |
| Input low-level voltage                      | V <sub>IL1</sub>                      | P2, P3 (except for the P33/HOLD pin), P5, P6, RES, and OSC1: N-channel output transistor off   |                     |     | 0.2 V <sub>DD</sub>   | V        | 2    |
|  | V <sub>IL2</sub>                      | P33/HOLD: V <sub>DD</sub> = 1.8 to 5.5 V   |                     |     | 0.2 V <sub>DD</sub>   | V        |      |
|  | V <sub>IL3</sub>                      | P0, P1, P4, PC, PD, PE, TEST: N-channel output transistor off  | V <sub>SS</sub>     |     | 0.2 V <sub>DD</sub>   | V        | 3    |
|  | V <sub>IL4</sub>                      | PE: With 3-value input used, V <sub>DD</sub> = 3.0 to 5.5 V  | V <sub>SS</sub>     |     | 0.2 V <sub>DD</sub>   | V        |      |
| Operating frequency (instruction cycle time) | f <sub>op</sub> (T <sub>cyc</sub> )   |  | 0.4 (10)            |     | 4.35 (0.92)           | MHz (μs) |      |
| [External clock input conditions]            |                                       |  |                     |     |                       |          |      |
| Frequency                                    | f <sub>ext</sub>                      | OSC1: Defined by Figure 1. Input the clock signal to OSC1 and leave OSC2 open. (External clock input must be selected as the oscillator circuit option.) | 0.4                 |     | 4.35                  | MHz      |      |
| Pulse width                                  | t <sub>extH</sub> , t <sub>extL</sub> | OSC1: Defined by Figure 1. Input the clock signal to OSC1 and leave OSC2 open. (External clock input must be selected as the oscillator circuit option.) | 100                 |     |                       | ns       |      |
| Rise and fall times                          | t <sub>extR</sub> , t <sub>extF</sub> | OSC1: Defined by Figure 1. Input the clock signal to OSC1 and leave OSC2 open. (External clock input must be selected as the oscillator circuit option.) |                     |     | 30                    | ns       |      |

Note: 1. Applies to pins with open-drain specifications. However, V<sub>IH2</sub> applies to the P33/HOLD pin.

When ports P2, P3, and P6 have CMOS output specifications they cannot be used as input pins.

2. Applies to pins with open-drain specifications.

3. When RE is used as a three-value input, V<sub>IH4</sub>, V<sub>IM</sub>, and V<sub>IL4</sub> apply. When the ports PC pins have CMOS output specifications they cannot be used as input pins.

**Electrical Characteristics at Ta = -30 to +70°C, V<sub>SS</sub> = 0 V, V<sub>DD</sub> = 2.5 to 5.5 V unless otherwise specified.**

| Parameter                             | Symbol            | Conditions  | min                   | typ                 | max                 | Unit | Note             |
|---------------------------------------|-------------------|---|-----------------------|---------------------|---------------------|------|------------------|
| Input high-level current              | I <sub>IH1</sub>  | P2, P3 (except for the P33/HOLD pin), P4, P5, and P6: V <sub>IN</sub> = 13.5 V, with the output Nch transistor off                    |                       |                     | 5.0                 | μA   | 1                |
|                                       | I <sub>IH2</sub>  | P0, P1, PC, OSC1, $\overline{\text{RES}}$ , P33/HOLD: V <sub>IN</sub> = V <sub>DD</sub> , with the output Nch transistor off          |                       |                     | 1.0                 | μA   | 1                |
|                                       | I <sub>IH3</sub>  | PD, PE, PC2, PC3: V <sub>IN</sub> = V <sub>DD</sub> , with the output Nch transistor off  |                       |                     | 1.0                 | μA   | 1                |
| Input low-level current               | I <sub>IL1</sub>  | Input ports other than PD, PE, PC2, and PC3: V <sub>IN</sub> = V <sub>SS</sub> , with the output Nch transistor off                   | -1.0                  |                     |                     | μA   | 2                |
|                                       | I <sub>IL2</sub>  | PC2, PC3, PD, PE: V <sub>IN</sub> = V <sub>SS</sub> , with the output Nch transistor off  | -1.0                  |                     |                     | μA   | 2                |
| Output high-level voltage             | V <sub>OH1</sub>  | P2, P3 (except for the P33/HOLD pin), P6, and PC: I <sub>OH</sub> = -1 mA   | V <sub>DD</sub> - 1.0 |                     |                     | V    | 3                |

| Parameter  | Symbol               | Conditions   | min | typ  | max | Unit    | Note |
|--|----------------------|--|-----|------|-----|---------|------|
| [Pulse conditions]   |                      |  |     |      |     |         |      |
| INT0 high and low-level  | $t_{IOH}, t_{IOL}$   | INT0: Figure 6, conditions under which the INT0 interrupt can be accepted, conditions under which the timer 0 event counter or pulse width measurement input can be accepted | 2   |      |     | Tcyc    |      |
| High and low-level pulse widths for interrupt inputs other than INT0 | $t_{IIH}, t_{IIL}$   | INT1, INT2: Figure 6, conditions under which the corresponding interrupt can be accepted   | 2   |      |     | Tcyc    |      |
| PIN1 high and low-level pulse widths                                 | $t_{PINH}, t_{PINL}$ | PIN1: Figure 6, conditions under which the timer 1 event counter input can be accepted   | 2   |      |     | Tcyc    |      |
| RES high and low-level pulse widths                                  | $t_{RSH}, t_{RSL}$   | RES: Figure 6, conditions under which reset can be applied.  | 3   |      |     | Tcyc    |      |
| Comparator response speed  | $T_{RS}$             | PD: Figure 7, $V_{DD} = 3.0$ to $5.5$ V  |     |      | 20  | ms      |      |
| Operating current drain  | $I_{DDOP}$           | $V_{DD}$ : 4-MHz ceramic oscillator  |     | 3.0  | 5.0 | mA      | 6    |
|  |                      | $V_{DD}$ : 4-MHz external clock  |     | 3.0  | 5.0 | mA      |      |
| Halt mode current drain  | $I_{DDHALT}$         | $V_{DD}$ : 4-MHz ceramic oscillator  |     | 1.0  | 2.0 | mA      |      |
|  |                      | $V_{DD}$ : 4-MHz external clock  |     | 1.0  | 2.0 | mA      |      |
| Hold mode current drain  | $I_{DDHOLD}$         | $V_{DD}$ : $V_{DD} = 1.8$ to $5.5$ V   |     | 0.01 | 10  | $\mu$ A |      |

- Note: 1. With the output Nch transistor off in shared I/O ports with the open-drain output specifications. These pins cannot be used as input pins if the CMOS output specifications are selected.  
 2. With the output Nch transistor off in shared I/O ports with the open-drain output specifications. The rating for the pull-up output specification pins is stipulated in terms of the output pull-up current IPO. These pins cannot be used as input pins if the CMOS output specifications are selected.  
 3. With the output Nch transistor off for CMOS output specification pins.  
 4. With the output Nch transistor off for pull-up output specification pins.  
 5. With the output Nch transistor off for open-drain output specification pins.  
 6. Reset state

|           |  |
|-----------|--|
| PCh:      | Bits 8 to 11 in the PC                     |
| PCm:      | Bits 4 to 7 in the PC                      |
| PCl:      | Bits 0 to 3 in the PC                      |
| Fn:       | User flag, n = 0 to 15                     |
| TIMER0:   | Timer 0                                    |
| TIMER1:   | Timer 1                                    |
| SIO:      | Serial register                            |
| P:        | Port                                       |
| P (i4):   | Port indicated by 4 bits of immediate data |
| INT:      | Interrupt enable flag                      |
| ( ), [ ]: | Indicates the contents of a location       |
| ←:        | Transfer direction, result                 |
| ∨:        | Exclusive or                               |
| ∧:        | Logical and                                |
| ∨:        | Logical or                                 |
| +:        | Addition                                   |
| -:        | Subtraction                                |
| —:        | Taking the one's complement                |

| Mnemonic  | Instruction code  |  | Number of bytes  | Number of cycles | Operation | Description   | Affected status bits  | Note   |  |
|---|---|--|--|------------------|-----------|---|---|--------|--|
|   | D <sub>7</sub> D <sub>6</sub> D <sub>5</sub> D <sub>4</sub> | D <sub>3</sub> D <sub>2</sub> D <sub>1</sub> D <sub>0</sub>            |  |                  |           |   |   |        |  |
| [Accumulator manipulation instructions]         |   |  |  |                  |           |   |   |        |  |
| CLA   | Clear AC  | 1 0 0 0  | 0 0 0 0  | 1                | 1         | AC ← 0<br>(Equivalent to LAI 0.)  | Clear AC to 0.  | ZF     | Has a vertical skip function.                            |
| DAA   | Decimal adjust AC in addition                               | 1 1 0 0<br>0 0 1 0   | 1 1 1 1<br>0 1 1 0   | 2                | 2         | AC ← (AC) + 6<br>(Equivalent to ADI 6.)   | Add six to AC.  | ZF     |  |
| DAS   | Decimal adjust AC in subtraction                            | 1 1 0 0<br>0 0 1 0   | 1 1 1 1<br>1 0 1 0   | 2                | 2         | AC ← (AC) + 10<br>(Equivalent to ADI 0AH.)  | Add 10 to AC.   | ZF     |  |
| CLC   | Clear CF  | 0 0 0 1  | 1 1 1 0  | 1                | 1         | CF ← 0  | Clear CF to 0.  | CF     |  |
| STC   | Set CF  | 0 0 0 1  | 1 1 1 1  | 1                | 1         | CF ← 1  | Set CF to 1.  | CF     |  |
| CMA   | Complement AC   | 0 0 0 1  | 1 0 0 0  | 1                | 1         | AC ← $\overline{(AC)}$  | Take the one's complement of AC.  | ZF     |  |
| IA  | Increment AC  | 0 0 0 1  | 0 1 0 0  | 1                | 1         | AC ← (AC) + 1   | Increment AC.   | ZF, CF |  |
| DA  | Decrement AC  | 0 0 1 0  | 0 1 0 0  | 1                | 1         | AC ← (AC) - 1   | Decrement AC.   | ZF, CF |  |
| RAR   | Rotate AC right through CF                                  | 0 0 0 1  | 0 0 0 0  | 1                | 1         | AC <sub>3</sub> ← (CF),<br>AC <sub>n</sub> ← (AC <sub>n</sub> + 1),<br>CF ← (AC <sub>0</sub> )  | Shift AC (including CF) right.  | CF     |  |
| RAL   | Rotate AC left through CF                                   | 0 0 0 0  | 0 0 0 1  | 1                | 1         | AC <sub>0</sub> ← (CF),<br>AC <sub>n</sub> + 1 ← (AC <sub>n</sub> ),<br>CF ← (AC <sub>3</sub> ) | Shift AC (including CF) left.   | CF, ZF |  |
| TAE   | Transfer AC to E  | 0 1 0 0  | 0 1 0 1  | 1                | 1         | E ← (AC)  | Transfer the contents of AC to E.   |        |  |
| TEA   | Transfer E to AC  | 0 1 0 0  | 0 1 1 0  | 1                | 1         | AC ← (E)  | Transfer the contents of E to AC.   | ZF     |  |
| XAE   | Exchange AC with E  | 0 1 0 0  | 0 1 0 0  | 1                | 1         | (AC) ↔ (E)  | Exchange the contents of AC and E.  |        |  |
| [Memory manipulation instructions]              |   |  |  |                  |           |   |   |        |  |
| IM  | Increment M   | 0 0 0 1  | 0 0 1 0  | 1                | 1         | M (HL) ←<br>[M (HL)] + 1  | Increment M (HL).   | ZF, CF |  |
| DM  | Decrement M   | 0 0 1 0  | 0 0 1 0  | 1                | 1         | M (HL) ←<br>[M (HL)] - 1  | Decrement M (HL).   | ZF, CF |  |
| IMDR i8   | Increment M direct  | 1 1 0 0<br>l <sub>7</sub> l <sub>6</sub> l <sub>5</sub> l <sub>4</sub> | 0 1 1 1<br>l <sub>3</sub> l <sub>2</sub> l <sub>1</sub> l <sub>0</sub> | 2                | 2         | M (i8) ← [M (i8)] + 1   | Increment M (i8).   | ZF, CF |  |
| DMDR i8   | Decrement M direct  | 1 1 0 0<br>l <sub>7</sub> l <sub>6</sub> l <sub>5</sub> l <sub>4</sub> | 0 0 1 1<br>l <sub>3</sub> l <sub>2</sub> l <sub>1</sub> l <sub>0</sub> | 2                | 2         | M (i8) ← [M (i8)] - 1   | Decrement M (i8).   | ZF, CF |  |
| SMB t2  | Set M data bit  | 0 0 0 0  | 1 1 t <sub>1</sub> t <sub>0</sub>                                      | 1                | 1         | [M (HL), t2] ← 1  | Set the bit in M (HL) specified by t0 and t1 to 1.  |        |  |
| RMB t2  | Reset M data bit  | 0 0 1 0  | 1 1 t <sub>1</sub> t <sub>0</sub>                                      | 1                | 1         | [M (HL), t2] ← 0  | Clear the bit in M (HL) specified by t0 and t1 to 0.  | ZF     |  |
| [Arithmetic, logic and comparison instructions] |   |  |  |                  |           |   |   |        |  |
| AD  | Add M to AC   | 0 0 0 0  | 0 1 1 0  | 1                | 1         | AC ← (AC) +<br>[M (HL)]   | Add the contents of AC and M (HL) as two's complement values and store the result in AC.              | ZF, CF |  |
| ADDR i8   | Add M direct to AC  | 1 1 0 0<br>l <sub>7</sub> l <sub>6</sub> l <sub>5</sub> l <sub>4</sub> | 1 0 0 1<br>l <sub>3</sub> l <sub>2</sub> l <sub>1</sub> l <sub>0</sub> | 2                | 2         | AC ← (AC) + [M (i8)]  | Add the contents of AC and M (i8) as two's complement values and store the result in AC.              | ZF, CF |  |
| ADC   | Add M to AC with CF   | 0 0 0 0  | 0 0 1 0  | 1                | 1         | AC ← (AC) +<br>[M (HL)] + (CF)  | Add the contents of AC, M (HL) and C as two's complement values and store the result in AC.           | ZF, CF |  |
| ADI i4  | Add immediate data to AC                                    | 1 1 0 0<br>0 0 1 0   | 1 1 1 1<br>l <sub>3</sub> l <sub>2</sub> l <sub>1</sub> l <sub>0</sub> | 2                | 2         | AC ← (AC) +<br>l <sub>3</sub> , l <sub>2</sub> , l <sub>1</sub> , l <sub>0</sub>                | Add the contents of AC and the immediate data as two's complement values and store the result in AC.  | ZF     |  |
| SUBC  | Subtract AC from M with CF                                  | 0 0 0 1  | 0 1 1 1  | 1                | 1         | AC ← [M (HL)] -<br>(AC) - (CF)  | Subtract the contents of AC and CF from M (HL) as two's complement values and store the result in AC. | ZF, CF | CF will be zero if there was a borrow and one otherwise. |
| ANDA  | And M with AC then store AC                                 | 0 0 0 0  | 0 1 1 1  | 1                | 1         | AC ← (AC) ∧<br>[M (HL)]   | Take the logical and of AC and M (HL) and store the result in AC.                                     | ZF     |  |
