LC709201F

CMOS IC

Battery Monitor IC

Overview

The LC709201F is an IC that measures the remaining power level of 1-cell lithium-ion secondary batteries by monitoring the battery voltage without an external sense resistor, and detects the remaining battery power level by current prediction. It monitors the battery voltage and realizes a function that precisely measures the remaining battery charge. In addition, the IC realizes the function for calculating the remaining battery power level even more accurately by utilizing a temperature correction function that makes use of the temperature input from a thermistor.

Features

■Accuracy of remaining battery power level measurement

- Accuracy of $\pm 5\%$ during discharging from 100% to 0% (at an ambient operating temperature of 0°C to 50°C)

■Measurement of remaining battery power level

- The remaining power level is measured four times a second and calculated with each measurement undertaken.

■Interface

- I²Cbus, communication in slave mode up to 100kHz supported

■Ports

- | | |
|--|--------------|
| • I ² C-bus communication pin | 2 (SDA, SCL) |
| • Battery temperature reading control pin | 1 (TSW) |
| • Analog voltage input pin for battery temperature | 1 (TSENSE) |
| • Reset pin | 1 (RESB) |
| • TEST pin | 1 (TEST) |
| • Power supply pin | 2 (VSS, VDD) |

■Package form

- MFP10S (225 mil): LC709201FM-01/02/03
- VCT16 (2.6×2.6): LC709201FRD-01/02/03

Applications

- Cell phones, PDA devices, MP3 players, cordless phones, digital cameras, USB-related devices, etc.

(Note) Depending on the kinds of battery, applicable model differs (LC709201F-01/02/03).
