

# LC7538JM

## Electronic Volume Control System for Car Audio

### Overview

The LC7538JM is a fully equipped electronic volume IC which permits significant reductions in externally connected components while providing ample volume, balance, loudness, fader, bass and treble control functions.

### Features

- Volume : 81 positions ranging from 0 dB to -79 dB (in 1 dB increments) plus  $-\infty$ . Separate left and right control provides excellent balance function.
- Loudness : Loudness operation provided by externally attached CR to activate tap at the -20 dB position of the volume ladder resistor.
- Fader : Fader function traversing 16 positions with rear or front attenuated output only (these 16 positions consist of 2 dB step intervals ranging from 0 dB to -20 dB, 5 dB step intervals ranging from -20 dB to -45 dB, plus the end settings of -60 dB and  $-\infty$ ).
- Bass and Treble: Using externally attached C (capacitor), the LC7538JM provides bass-treble mutual 15-position control and formats a NF-form tone control circuit (LUX form).

- On-chip op amplifier for caching applications reduces external components.
- Reduced switching noise with silicon gate CMOS processor.
- All controls performed using serial data input (CCB).

### Package Dimensions

unit : mm

#### 3204-MFP36S

### Specifications

#### Absolute Maximum Ratings at $T_a = 25^\circ\text{C}$ , $V_{SS} = 0\text{ V}$

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	$V_{DD\text{ max}}$	$V_{DD}$	11	V
Maximum input voltage	$V_{IN\text{ max}1}$	CL, DI, CE	$V_{SS} - 0.3$ to $V_{DD} + 0.3$	V
	$V_{IN\text{ max}2}$	LTIN, RTIN, L5dBIN, R5dBIN, L1dBIN, R1dBIN, LFIN, RFIN	$V_{SS} - 0.3$ to $V_{DD} + 0.3$	V
Allowable power dissipation	$P_{d\text{ max}}$	$T_a \leq 85^\circ\text{C}$	210	mW
Operating temperature	$T_{opr}$		-40 to +85	$^\circ\text{C}$
Storage temperature	$T_{stg}$		-50 to +125	$^\circ\text{C}$

■ Any and all SANYO products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO representative nearest you before using any SANYO products described or contained herein in such applications.

■ SANYO assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO products described or contained herein.

## LC7538JM

### Allowable Operation Conditions at $T_a = 25^\circ\text{C}$ , $V_{SS} = 0\text{ V}$

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Supply voltage	$V_{DD}$	*1	7.0		10.0	V
Input high level voltage	$V_{IH}$	CL, DI, CE	4.0		$V_{DD}$	V
Input low level voltage	$V_{IL}$	CL, DI, CE	$V_{SS}$		1.0	V
Input amplitude voltage	$V_{IN}$	LTIN, RTIN, L5dBIN, R5dBIN, L1dBIN, R1dBIN, LFIN, RFIN	$V_{SS}$		$V_{DD}$	Vp-p
Input pulse width	$t_{\phi W}$	CL	1			$\mu\text{s}$
Setup time	$t_{SETUP}$	CL, DI, CE	1			$\mu\text{s}$
Hold time	$t_{HOLD}$	CL, DI, CE	1			$\mu\text{s}$
Operating Frequency	fopg	CL			500	kHz

Note: 1. A capacitor rated at 2000 pF or less should be installed between all power supply pins and  $V_{SS}$ .

### Electrical Characteristics at $T_a = 25^\circ\text{C}$ , $V_{DD} = 9\text{ V}$ , $V_{SS} = 0\text{ V}$

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Total harmonic distortion	THD (1)	$V_{IN} = 1\text{ Vrms}$ , $f = 1\text{ kHz}$ , total overall flat		0.04		%
	THD (2)	$V_{IN} = 1\text{ Vrms}$ , $f = 20\text{ kHz}$ , total overall flat		0.06		%
Crosstalk	CT	$V_{IN} = 1\text{ Vrms}$ , $f = 1\text{ kHz}$ , total overall flat, $R_g = 1\text{ k}\Omega$	60	87		dB
Maximum Output Reduction	$V_{o\text{ min}}$	$V_{IN} = 1\text{ Vrms}$ , $f = 1\text{ kHz}$ , main volume $-\infty$ , fader volume $-\infty$ , $C = 1000\text{ }\mu\text{F}$ between $V_{ref}$ and $V_{SS}$ for L/R		82		dB
All Resistance Value	$R_{VOL(1)}$	5 dB step	15	25	35	$\text{k}\Omega$
	$R_{VOL(2)}$	1 dB step	12	20	28	$\text{k}\Omega$
	$R_{FADER}$		12	20	28	$\text{k}\Omega$
	$R_{BASS}$		48	80	112	$\text{k}\Omega$
	$R_{TREBLE}$		30	50	70	$\text{k}\Omega$
Input high level current	$I_{IH}$	$V_I = 8\text{ V}$ (CL, CE, DI pins)			10	$\mu\text{A}$
Input low level current	$I_{IL}$	$V_I = 0\text{ V}$ (CL, CE, DI pins)	-10			$\mu\text{A}$
Output noise voltage	$V_N$	All overall flat (IHF-A), $R_g = 1\text{ k}\Omega$		7.5	15	$\mu\text{V}$
Current dissipation	$I_{DD}$	$V_{DD} - V_{SS} = 10\text{ V}$		15	21	mA
Analog switch on resistance	$R_{ON}$	CT1	1.8	3.0	4.2	$\text{k}\Omega$
		Between CT2 and $V_{ref}$	0.6	1.0	1.4	$\text{k}\Omega$
		Fader S1 to S4	1.8	3.0	4.2	$\text{k}\Omega$
		$-\infty$	0.6	1.0	1.4	$\text{k}\Omega$
		All other cases	6.0	10.0	14.0	$\text{k}\Omega$

Equivalent Circuit for Main Volume Section

Unit (resistance: Ω)

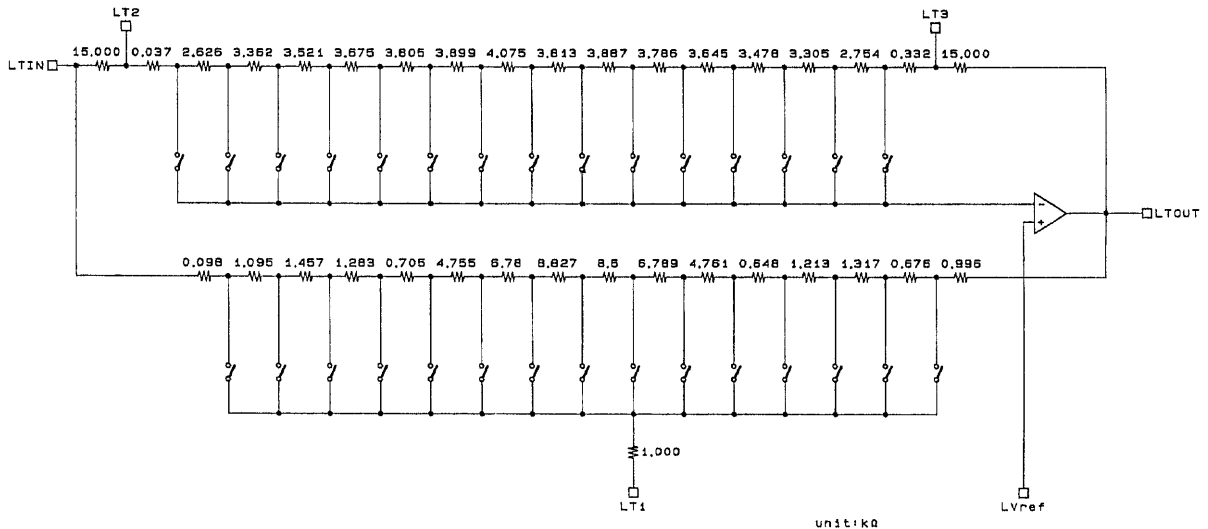

Equivalent Circuit for Fader Volume Section

When data of  $-\infty$  is transferred to main volume control 1 dB step, S1 and S2 open and S3, S4 are turned on simultaneously.

Unit (resistance:  $\Omega$ )

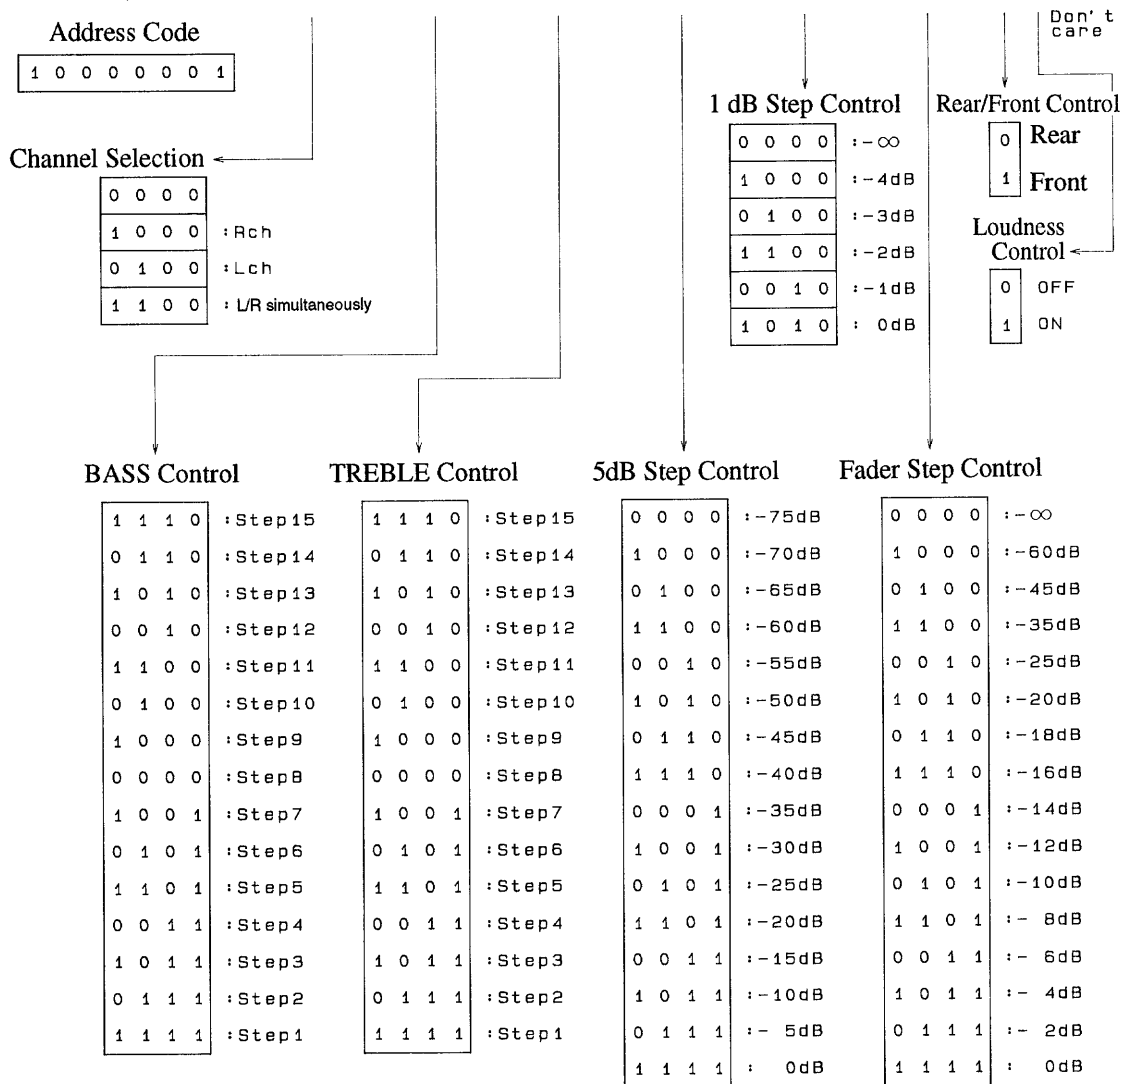

Equivalent Circuit for Tone Section

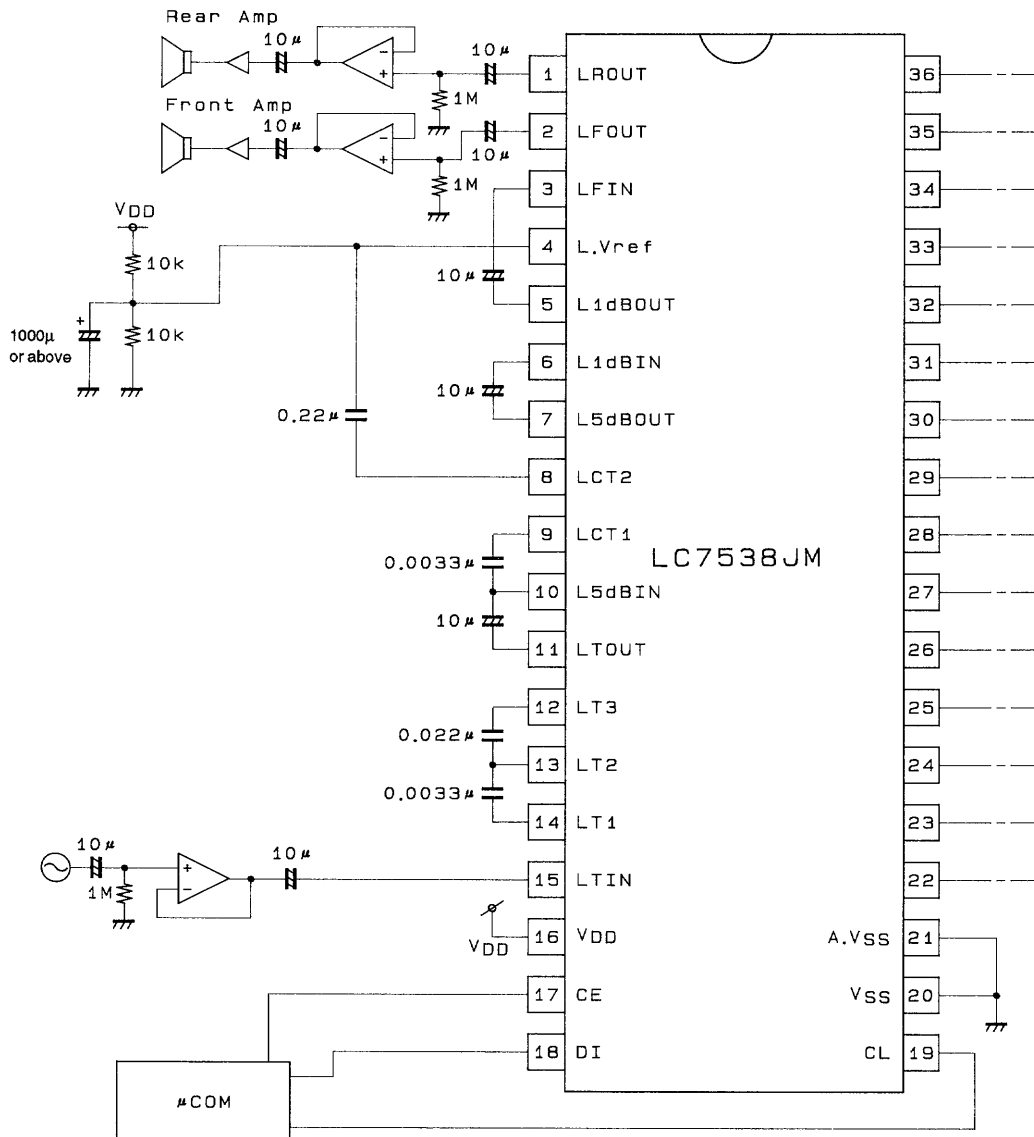

### Control System Timing and Data Format

Controlling of LC7538JM involves the input of regulating serial data to CE, CL and DI pins. Data format consists of 36 bits composed of an 8-bit address and 28-bit data.

### Loudness External Constant Calculation Sample

First, refer to page 7 where the 5 dB step internal equivalent circuit for the LC7538JM is shown. Using this information, an external constant for loudness can be added to establish a simplified circuit for computation as shown in Figure 1. Computations gaining a 5 dB boost with  $f = 100$  Hz using this configuration are shown in the following.  
( $f = 100$  Hz and 5 dB boost)

Within Figure 1, when R and C are defined as:

$$R1 = R2 = 10 \text{ k}\Omega$$

$$R3 = 1 \text{ k}\Omega$$

$C1 = Z1, C2 = Z2$ , then the following equation can be established:

$$V_{OUT} = \frac{\frac{R2 (R3 + Z2)}{R2 + R3 + Z2}}{\frac{R1 \cdot Z1}{R1 + Z1} + \frac{R2 (R3 + Z2)}{R2 + R3 + Z2}} = -20\text{dB}$$

(at = 1kHz)

$$V_{OUT} = \frac{\frac{R2 (R3 + 10 \cdot Z2)}{R2 + R3 + 10 \cdot Z2}}{\frac{R1 \cdot 10 \cdot Z1}{R1 + 10 \cdot Z1} + \frac{R2 (R3 + 10 \cdot Z2)}{R2 + R3 + 10 \cdot Z2}} = -15\text{dB}$$

(at = 100Hz)

thereby resulting in,

$$Z1 \neq 178.3 \text{ k}\Omega \text{ and } Z2 = 176 \Omega.$$

Under such conditions where  $f = 1$  kHz, specifications may be satisfied if C (capacitor) having these impedances is supplied externally. The end result is that  $C1 = 893$  pF and  $C2 = 0.9$   $\mu$ F.

- R1, R2 and R3 : LC7538JM on-chip resistors
- C1 : External high-band compensation capacitor
- C2 : External low-band compensation capacitor

**Figure 1**

#### Notes for Above Applications

- When the power supply is turned on, the internal analog switch becomes inexact. Until data is set, counter measures such as those required for muting are performed externally.
- In order to prevent crossover into the analog system of high-frequency digital signals transferred to the CL, DI and CE pins, transfer along these signal lines should occur along shielded lines, or the signal lines should be protected by using the grounding pattern or the circuit.
- Capacitors of at least 2000 pF must be inserted between each power supply pin and the  $V_{SS}$  pin.
- For volume steps with large attenuation levels (over  $-20$  dB), when the loudness circuit is off the high frequency region (above about 4 kHz) will be attenuated by about 3 dB relative to the low frequency region (about 400 Hz) due to the influence of the resistance of the loudness circuit analog switch. Therefore we recommend using tone control compensation together with the volume step described above.
- When sending data immediately after power on, send data as follows:
  - When sending independent left and right data, send data at least four times.

- Alternatively, when sending data that drives the left and right channels at the same time, send the data at least twice.

A02518

- Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
