

**LC75397E**

Single Chip Electronic Volume and Tone Control System

Overview

The LC75397 is an electronic volume control system providing control over volume, balance, 4-band equalizer, bass, and input switching based on serial inputs.

Functions

- **Volume control:**
The chip provides 81 levels of volume attenuation: in 1-dB step between 0 dB and -79 dB and $-\infty$.
This circuit can control a total of 5 independent channels.
- **Equalizer:**
The chip provides control in 2-dB steps over the range between +10 dB and -10 dB. Three of the four bands have peaking equalization; the remaining one, shelving equalization.
- **Selector:**
The left and right channels each offer a choice of six inputs. The L6 and R6 inputs can be turned on and off independently. An external constant determines the amplification for the input signal.
- **Input gain:**
The input signal can be amplified by 0 to +30 dB in 2-dB steps.
- **Bass control:**
The bass can be controlled over a ± 10 dB range in 2-dB steps.

Features

- Built-in buffer amplifiers reduce the number of external parts required.
- Silicon gate CMOS process reduces the noise of built-in switch.
- Built-in analog ground reference voltage generator circuit
- All functions are controlled by serial input data. This IC supports the CCB standard.

Package Dimensions

unit: mm

3159-QFP64E

- CCB is a trademark of SANYO ELECTRIC CO., LTD.
- CCB is SANYO's original bus format and all the bus addresses are controlled by SANYO.

■ Any and all SANYO products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO representative nearest you before using any SANYO products described or contained herein in such applications.

■ SANYO assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO products described or contained herein.

Sample Application Circuit

Control System Timing and Data Formats

To control the LC75397E, specified sequences are required to be input through the pins CE, CL, and DI. Each sequence consists of 48 bits: an 8-bit address followed by 56 bits of data.

1. Address Code (B0 to A3)

This product uses an 8-bit address code, and supports the same specifications as other Sanyo CCB serial bus products.

Address code (LSB)

B0	B1	B2	B3	A0	A1	A2	A3
0	1	0	0	0	0	0	1

(82HEX)

2. Control Code Allocations

External Capacitor Calculations

1. Bass circuit

The value of the external capacitor used by the LC75397E bass control can be calculated as shown in the example below.

Sample calculation: For a center frequency f_0 of 39 Hz

Substitute the LC75397E internal resistors R_1 and R_2 shown below into the above formula.

This allows the value of the capacitor, C , to be calculated.

$$R_1 = 1.3 \text{ k}\Omega$$

$$R_2 = 57.993 \text{ k}\Omega$$

Assume $C_1 = C_2 = C$.

$$C = \frac{1}{2\pi f_0 \sqrt{R_1 R_2}}$$

$$C = \frac{1}{2\pi \times 39 \times \sqrt{1300 \times 58000}} \approx 0.47 \text{ }\mu\text{F}$$

Formula for calculating the gain:

$$R_1 = 1.3 \text{ k}\Omega$$

$$R_{2U} = 1.476 \text{ k}\Omega$$

$$R_{2L} = 56.517 \text{ k}\Omega$$

$$G = \sqrt{\left(\frac{R_1}{R_1 + R_{2U}}\right)^2 + \left(\frac{R_1 (R_{2U} + R_{2L})}{(R_1 + R_{2U}) \sqrt{R_1 (R_{2U} + R_{2L})}}\right)^2} = 3.16 = 10 \text{ dB}$$

Formula for calculating Q :

$$Q = \sqrt{\frac{R_1 (R_{2U} + R_{2L})}{(R_1 + R_{2U}) \sqrt{R_1 (R_{2U} + R_{2L})}}} \neq G$$

2. F1/F2 band circuits

This section presents the equivalent circuit and the formulas used to calculate the external resistor and capacitor values to provide a center frequency of 148 Hz.

• F1/F2 band equivalent circuit

• Sample calculation

Specifications: Center frequency: $f_0 = 148 \text{ Hz}$

Gain at maximum boost: $G_{+10\text{dB}} = 10 \text{ dB}$

Assume $R_1 = 51.8 \text{ k}\Omega$ and $C_1 = C_2 = C$.

(1) Determine R_2 from the specification that $G_{+10\text{dB}} = 10 \text{ dB}$.

$$G_{+10\text{dB}} = 20 \times \text{LOG}_{10} \left(1 + \frac{R_1}{2R_2} \right)$$

$$R_2 = \frac{R_1}{2(10^{G_{+10\text{dB}}/20} - 1)} = \frac{51800}{2 \times (3.162 - 1)} = 11979.7 \approx 12 \text{ k}\Omega$$

(2) Determine C from the specification that the center frequency $f_0 = 148 \text{ Hz}$.

$$f_0 = \frac{1}{2\pi f \sqrt{R_1 R_2 C_1 C_2}}$$

$$C = \frac{1}{2\pi f_0 \sqrt{R_1 R_2}} = \frac{1}{2\pi \times 148 \sqrt{51800 \times 12000}} = 0.0431 \times 10^{-6} \approx 0.044 \mu\text{F}$$

(3) Determine Q .

$$Q = \frac{C \cdot C \cdot R_1}{2C} \cdot \frac{1}{\sqrt{R_1 R_2 C C}} = \frac{51800}{2\sqrt{51800 \times 12000}} = 1.039$$

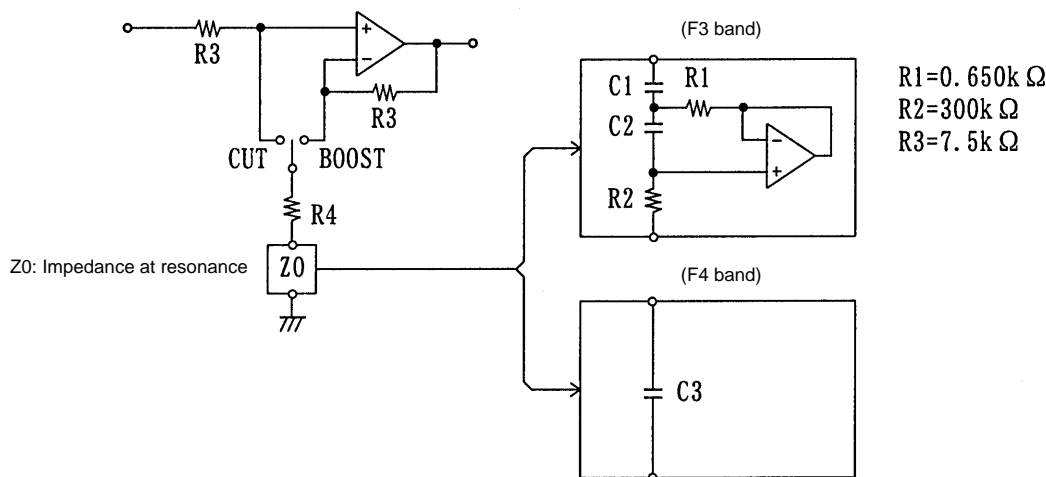

3. F3/F4 band circuits

The F3 band circuit supports peaking characteristics and the F4 band circuit supports shelving characteristics.

(1) Peaking characteristics (F3 band)

The external capacitor is used to construct a simulated inductor. This section presents the equivalent circuit and the formulas for determining the desired center frequency.

(a) Simulated inductor equivalent circuit

(b) Sample calculation

Specifications: 1) Center frequency: $f_0 = 107 \text{ Hz}$
 2) Q at maximum boost: $Q_{+10dB} = 0.8$

(1) Determine the sharpness, Q_0 , of the simulated inductor itself.

$$Q_0 = (R1 + R4) / R1 \times Q_{+10dB} \approx 4.270$$

(2) Determine C1.

$$C1 = 1 / 2\pi f_0 R1 Q_0 \approx 0.536 (\mu F)$$

(3) Determine C2.

$$C2 = Q_0 / 2\pi f_0 R2 \approx 0.021 (\mu F)$$

(c) Reference values for C1 and C2

Center frequency f_0 (Hz)	C1 (F)	C2 (F)
107	0.536 μ	0.021 μ
340	0.169 μ	6663P
1070	0.054 μ	2117P
3400	0.017 μ	666P

(2) Shelving characteristics (F4 band)

Gains of $\pm 10 \text{ dB}$ (in 2-dB steps) with respect to a target frequency can be achieved by using an external capacitor C3 with a calculated according to the formula F shown below.

Equivalent circuit and formula when boosting.

Sample calculation

Specifications: 1) Target frequency: $f = 17,000$ Hz
 2) $R1 = 2,819$ k Ω , $R2 = 7.5$ k Ω

$$C = \frac{1}{2\pi f \sqrt{\left(\frac{R2}{10G/20 - 1}\right)^2 - R1^2}}$$

$$= \frac{1}{2\pi \times 17000 \sqrt{\left(\frac{7500}{3.16 - 1}\right)^2 - (2819)^2}}$$

$$\approx 4600 \text{ (pF)}$$

Usage Notes

- When the power is first applied, the internal analog switches are in indeterminate states. The chip therefore requires muting or other external measures until it has received the proper data.
- After power is first applied, applications must initialize this chip by sending the initial data (1) and (2) described below.
- Provide grounding patterns or shielding for the lines to the CL, DI, and CE pins so as to prevent their high-frequency digital signals from interfering with the operation of nearby analog circuits.

- Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO products (including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written permission of SANYO Electric Co., Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO product that you intend to use.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production. SANYO believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.
