

LC786800E

CMOS LSI

Compressed Audio signal Processor IC with USB host controller

ON Semiconductor®

<http://onsemi.com>

Overview

The LC786800E integrates ARM7TDMI-S™, USB host processing, SD memory card host processing, Compressed audio encode/decode processing, Audio signal processing, Electronic volume and a flash memory which stores the program for ARM7TDMI-S™ and the various data. The sophisticated programs in the flash memory for the USB host processing or for the SD memory card processing or Electronic Volume control processing, etc. make the load of external main micro controller to be light and are very useful to develop a much features/high performance audio player system with less development burden.

Features

- USB host function (Full speed as 12Mbps), SD memory card host function
- MP3*, WMA*, AAC* decoder processing and normal speed MP3* encoder processing of external input with Sampling rate convertor and High frequency compensation filter
- Various Audio processing functions such as original Surround(AViSS®), seven band Equalizer, etc.

QIP100E(14X20)

ORDERING INFORMATION

See detailed ordering and shipping information on page 26 of this data sheet.

is a registered trademark of ARM Limited.

* MP3(MPEG Layer-3 Audio Coding)

MPEG Layer-3 audio coding technology licensed from Fraunhofer IIS and Thomson.

Supply of this product does not convey license nor imply any right to distribute content created with this product in revenue-generating broadcast systems (terrestrial, satellite, cable and/or other distribution channels), streaming applications (via Internet, intranets and/or networks), other content distribution systems (pay-audio or audio-on-demand applications and the like) or on physical media (compact discs, digital versatile discs, semiconductor chips, hard drives, memory cards and the like). An independent license for such use is required. For details, please visit <http://mp3licensing.com/>.

Supply of this product does not convey license under the relevant intellectual property of Thomson and/or Fraunhofer Gesellschaft nor imply any right to use this product in any finished end user or ready-to-use final product. An independent license for such use is required.

For details, please visit <http://mp3licensing.com/>.

* Windows Media Audio

Windows Media™ is a trademark and a registered trademark in the United States and other countries of United States Microsoft Corporation.

* AAC

Advanced Audio Coding

* This product is licensed from Silicon Storage Technology, Inc. (USA).

* AViSS is a registered trademark of Semiconductor Components Industries, LLC.

Continued from the previous page.

- Three stereo channels of analog input and four channels of Electronic Volume output (LF, LR, RF, RR)
- ARM7TDMI-S™ as internal CPU core, flash memory for program and various data storage
- Operating voltage: 3.3V typical
- Operating temperature: -40°C to +85°C
- Packages: QIP100 (14 × 20)

Detail of Functions

[Compressed audio functions]

- MP3 decode (ISO/IEC 11172-3, ISO/IEC 13818-3)
 - Sampling rate support: MPEG1-Layer1/2/3 (32kHz, 44.1kHz, 48kHz)
MPEG2-Layer1/2/3 (16kHz, 22.05kHz, 24kHz)
MPEG2.5-Layer3 (8kHz, 11.025kHz, 12kHz)
 - Bit rate support: All Bit Rate (Variable Bit Rate support)
 - MPEG header read support
- MP3 encode (ISO/IEC 11172-3)
 - MPEG1-Layer3
 - Sampling rate: 44.1kHz
 - Bit rate: 32kbps to 320kbps (Not support variable bit rate)
- WMA decode (Version 9 standard)
 - Sampling rate support: 8kHz, 11.025kHz, 16kHz, 22.05kHz, 32kHz, 44.1kHz, 48kHz
 - Bit rate support: 5kbps to 384kbps (Variable Bit Rate support)
- AAC decode (ISO/IEC 14496-3, ISO/IEC 13818-7)
 - Profile: MPEG4-AAC-LowComplexity
 - Sampling rate support: 8kHz, 11.025kHz, 12kHz, 16kHz, 22.05kHz, 24kHz, 32kHz, 44.1kHz, 48kHz
 - Bit rate support: Monaural 8kbps to 160kbps (Variable bit rate support)
Stereo 16kbps to 320kbps (Variable bit rate support)

[Audio processing functions]

<Audio data processing block>

- Our original surround (AViSS)
- 7band graphic equalizer
- Sampling Rate Converter ($F_s = 44.1\text{kHz}$) and High frequency compensation filter for compressed audio playback
- Mute function (-12dB, $-\infty$) and Digital attenuator
- De-emphasis filter

<Audio input processing block>

- Analog Audio data input (Three channels by stereo)
 - Single Ended input: 2 channels
 - Differential input: 1 channel (single end operation is also available)
 - Input Gain: -12.5dB to +18.5dB (1dB step)
 - 24bit accuracy AD converter (Three input selector)
- Digital Audio data input (Three channels by stereo)
 - Four signals connection (384Fs, LRCK, BCK and DATA) is required.
 - Corresponding in one of two ways.
 - (1) 384Fs input and three lines input synchronized.
 - (2) 384Fs output and three lines input synchronized.
 - Data Format: IIS, MSB first right justified, etc.

<Audio output processing block>

- Analog Audio data output (One channel by stereo)
 - Eight-fold over-sampling digital filter (24bit)
 - Secondary LPF for audio output
- Electronic Volume/Fader
 - Output channel : Left Front (LF)/Left Rear (LR), Right Front (RF)/Right Rear (RR)
 - Output Range : 0dB to -90dB, $-\infty$
 - 0dB to -32dB : Analog control, 0.25dB step
 - 32dB to -70dB : Analog control, 1.0dB step
 - 70dB to -90dB : Digital attenuator control
 - Decrease the noise at the volume change timing by the digital and analog composite control.
 - Individual volume control for LF, LR, RF and RR output is available.
- Digital Audio data output (One channel by stereo)
 - Four lines interface, Format: IIS, MSB first right justified, etc.

[External interface functions]

<USB host control block>

- Open Host Controller Interface 1.0a
- Universal Serial Bus Specification 1.1
 - Supports up to Full speed (12MHz) for USB2.0
 - Only detection at the device insertion is available for Low speed specification.
- Supports four kinds of transfer type (Control/Bulk/Interrupt/Isochronous)
- Two USB ports

<SD memory card host control block>

- Multimedia Card Specification v2.11
- Secure Digital Memory Card Physical Layer Specification v0.96
- * Individual contract is necessary to use SD memory card controller. For detail, please contact to us.

[Internal Microcontroller functions]

<Sequencer control>

- USB, SD memory card playback control
 - USB/SD files analysis, etc.
- Audio playback control
 - Various digital audio filter control, Electronic volume control, etc.

<Communication control between main controller>

- Communication format: SIO

<Peripheral interface block>

- GPIO port 37 ports maximum (Shared with other functions. Several pins are 5V tolerant.)
- External interrupt pins 4 pins maximum (Shared with other functions.)
- Serial interface
 - SIO clock synchronized full duplex (3 lines) 3 channels
 - UART full duplex 2 channels
 - IIC master function 1 channel

<Program memory block>

- Flash memory
 - Program version up from the external media (USB/CDROM*) or main controller is available.
 - * The update of program from CDROM will only be available if CD system is used with this IC.

<Others>

- Watch Dog Timer
 - Notify to outside from the pin or reset internally.
- Power management
 - 2 kinds of sleep mode
 - (1) Only CPU core operates at slow clock and clocks for other blocks are stopping.
 - (2) All clocks are stopping.

[Useful functions for CD-DSP IC connection usage]

<CD TEXT processing block>

- Buffers CD-TEXT data
 - Starts buffering from desired ID3/ID4 of CD-TEXT data.
- * Necessary to connect subcode synchronization signals (SBSY and SFSY), shift clock (SBCK) and data (PW).

<CD-ROM processing block>

- Up to quadruple speed operation available
 - CD-ROM decoding (Mode1, Mode2<form1, form2>)
 - Outputs CD-ROM decoded data
- * Necessary to connect three signals (LRCK, BCK and DATA).
It is possible if desired to connect C2 error flag.

[Others]

<Internal power supply>

- 1.5V regulator for internal blocks

LC786800E

Specifications

Absolute Maximum Ratings at $T_a = 25^\circ\text{C}$, $DV_{SS} = AV_{SS1} = AV_{SS2} = XV_{SS} = 0\text{V}$

Parameter	Symbol	Pin names	Conditions	Ratings	Unit
Maximum supply voltage	$V_{DD\text{ max}}$	DV_{DD} , AV_{DD1} , AV_{DD2} , XV_{DD} , VV_{DD2} , VV_{DD3}		-0.3 to +3.95	V
Input voltage 1	V_{IN1}	Input pins other than V_{IN2}		-0.3 to $DV_{DD}+0.3$	V
Input voltage 2	V_{IN2}	RESB, SIFCK, SIFDI, SIFDO, SIFCE, BUSYB, GP03, GP04, GP05, GP06, GP07, GP10, GP11, GP12, GP13, GP14, JTRSTB, JTCK, JTDI, JTMS		-0.3 to +5.6	V
Output voltage	V_{OUT}	All digital output pins and input/output pins		-0.3 to $DV_{DD}+0.3$	V
Allowable power dissipation	$P_d\text{ max}$		$T_a \leq 85^\circ\text{C}$ Mounted reference PCB (*)	519	mW
Operating temperature	T_{opr}			-40 to +85	$^\circ\text{C}$
Storage temperature	T_{stg}			-40 to +125	$^\circ\text{C}$

(*)Reference PCB: 114.3mm×76.1mm×1.6mm, glass epoxy resin

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

Allowable Operating Ranges at $T_a = -40$ to $+85^\circ\text{C}$, $DV_{SS} = AV_{SS1} = AV_{SS2} = XV_{SS} = 0\text{V}$

Parameter	Symbol	Pin names	Conditions	min	typ	max	Unit
Supply voltage	V_{DD1}	DV_{DD} , AV_{DD1} , AV_{DD2} , XV_{DD} , VV_{DD2} , VV_{DD3}		3.00		3.60	V
High-level input voltage	$V_{IH(1)}$	RESB, SIFCK, SIFDI, SIFDO, SIFCE, BUSYB, GP03, GP04, GP05, GP06, GP07, GP10, GP11, GP12, GP13, GP14, JTMS, JTRSTB, JTCK, JTDI	Schmitt	2.00		5.50	V
	$V_{IH(2)}$	GP30, GP31, GP32, GP33, GP34, GP35, GP36, GP37, GP40, GP41, GP42, GP43, GP44, GP45, GP46, GP47, GP50, GP51, GP52, GP53	Schmitt	2.00		V_{DD1}	V
Low-level input voltage	$V_{IL(1)}$	RESB, SIFCK, SIFDI, SIFDO, SIFCE, BUSYB, GP03, GP04, GP05, GP06, GP07, GP10, GP11, GP12, GP13, GP14, JTMS, JTRSTB, JTCK, JTDI	Schmitt	0		0.80	V
	$V_{IL(2)}$	GP30, GP31, GP32, GP33, GP34, GP35, GP36, GP37, GP40, GP41, GP42, GP43, GP44, GP45, GP46, GP47, GP50, GP51, GP52, GP53, TEST0, TEST1	Schmitt	0		0.80	V
Oscillator frequency	FX1	XIN	Oscillator circuit		12.0		MHz
		XOUT			or 16.9344		

LC786800E

Electrical Characteristics at Ta = -40 to +85°C, V_{DD1} = 3.0V to 3.6V, DV_{SS} = AV_{SS1} = AV_{SS2} = XV_{SS} = 0V

Parameter	Symbol	Pin names	Conditions	min	typ	max	Unit
Current drain	I _{DD1}	DV _{DD} , AV _{DD1} , AV _{DD2} , XV _{DD} , VV _{DD2} , VV _{DD3}			85	135	mA
High-level input current	I _{IH} (1)	RESB, SIFCK, SIFDI, SIFDO, SIFCE, BUSYB, GP03, GP04, GP05, GP06, GP07, GP10, GP11, GP12, GP13, GP14, JTMS, JTRSTB, JTCK, JTDI	Schmitt, V _{IN} = 5.50V Built-in Pull-down resistor OFF			10.00	μA
	I _{IH} (2)	GP30, GP31, GP32, GP33, GP34, GP35, GP36, GP37, GP40, GP41, GP42, GP43, GP44, GP45, GP46, GP47, GP50, GP51, GP52, GP53	Schmitt, V _{IN} = V _{DD1} Built-in Pull-down resistor OFF			10.00	μA
Low-level input current	I _{IL} (1)	RESB, SIFCK, SIFDI, SIFDO, SIFCE, BUSYB, GP03, GP04, GP05, GP06, GP07, GP10, GP11, GP12, GP13, GP14, GP30, GP31, GP32, GP33, GP34, GP35, GP36, GP37, GP40, GP41, GP42, GP43, GP44, GP45, GP46, GP47, GP50, GP51, GP52, GP53, JTMS, JTRSTB, JTCK, JTDI, TEST0, TEST1	Schmitt, V _{IN} = 0V	-10.00			μA
High-level output voltage	V _{OH} (1)	GP04, GP05, GP06, GP07, GP12, GP13, GP14, GP30, GP31, GP32, GP33, GP34, GP35, GP36, GP37, GP40, GP41, GP42, GP43, GP44, GP45, GP46, GP47, GP50, GP51, GP52, GP53	CMOS, I _{OH} = -2mA	V _{DD1} -0.6			V
	V _{OH} (2)	SIFDI, SIFDO, SIFCE, BUSYB, GP03, GP10, GP11, JTDO, JTRTCK	CMOS, I _{OH} = -4mA	V _{DD1} -0.6			V
Low-level output voltage	V _{OL} (1)	GP04, GP05, GP06, GP07, GP12, GP13, GP14, GP30, GP31, GP32, GP33, GP34, GP35, GP36, GP37, GP40, GP41, GP42, GP43, GP44, GP45, GP46, GP47, GP50, GP51, GP52, GP53	CMOS, I _{OL} = 2mA			0.40	V
	V _{OL} (2)	SIFDI, SIFDO, SIFCE, BUSYB, GP03, GP10, GP11, JTDO, JTRTCK	CMOS, I _{OL} = 4mA			0.40	V
Built-in Pull down resistor	RPD	SIFDO, SIFCE, BUSYB, GP03, GP04, GP05, GP06, GP07, GP10, GP11, GP12, GP13, GP14, GP30, GP31, GP32, GP33, GP34, GP35, GP36, GP37, GP40, GP41, GP42, GP43, GP44, GP45, GP46, GP47, GP50, GP51, GP52, GP53		50	100	200	kΩ
Output off-leakage current	IOFF(1)	AFILT	Hi-Z Out	-10.00		10.00	μA
	IOFF(2)	SIFDO	Hi-Z Out	-10.00		10.00	μA
Charge pump output current	IAFILH	AFILT			15.0		μA
	IAFILL	AFILT			15.0		μA

<Note>

- Put a internal pull down resistor or external pull down resistor or external pull up resistor to the SIFDO pin if its output condition is set to 3-State mode.

Pin Description

Pin No.	Pin name	I/O	State when "Reset"	Function
1	LFOUT	AO	Undefined	Electronic Volume : Left channel Front output
2	LROUT	AO	Undefined	Electronic Volume : Left channel Rear output
3	LVRIN	AI	Input	Electronic Volume : Left channel volume input
4	DACOUTL	AO	Undefined	Audio DAC : Left channel output
5	DACOUTR	AO	Undefined	Audio DAC : Right channel output
6	RVRIN	AI	Input	Electronic Volume : Right channel volume input
7	RROUT	AO	Undefined	Electronic Volume : Right channel Rear output
8	RFOUT	AO	Undefined	Electronic Volume : Right channel Front output
9	L1IN	AI	Input	Analog stereo Left channel Single Ended input 1
10	R1IN	AI	Input	Analog stereo Right channel Single Ended input 1
11	L2IN	AI	Input	Analog stereo Left channel Single Ended input 2
12	R2IN	AI	Input	Analog stereo Right channel Single Ended input 2
13	L3INP	AI	Input	Analog stereo Left channel Differential input (Positive) / Analog stereo Left channel Single Ended input 3
14	L3INN	AI	Input	Analog stereo Left channel Differential input (Negative)
15	R3INP	AI	Input	Analog stereo Right channel Differential input (Positive) / Analog stereo Right channel Single Ended input 3
16	R3INN	AI	Input	Analog stereo Right channel Differential input (Negative)
17	ATESTO1	AO	Undefined	Analog test output 1. This pin must be left open.
18	ATESTO2	AO	Undefined	Analog test output 2. This pin must be left open.
19	VREFOUT	AO	AV _{DD} 2/2	Reference voltage output
20	VREF_ADC	AO	AV _{DD} 2/2	Capacitor connection pin for audio ADC reference voltage
21	AV _{SS} 2	-	-	Analog system ground. This pin must be connected to the 0V level.
22	AV _{DD} 2	-	-	Analog system power supply
23	NC	-	-	NC pin. This pin must be left open.
24	NC	-	-	NC pin. This pin must be left open.
25	NC	-	-	NC pin. This pin must be left open.
26	NC	-	-	NC pin. This pin must be left open.
27	GP50	I/O	Input (L)	General purpose I/O port with pull down resistor
28	GP51	I/O	Input (L)	General purpose I/O port with pull down resistor
29	GP52	I/O	Input (L)	General purpose I/O port with pull down resistor
30	GP53	I/O	Input (L)	General purpose I/O port with pull down resistor
31	DV _{DD}	-	-	Digital system power supply
32	DV _{SS}	-	-	Digital system ground. This pin must be connected to the 0V level.
33	GP30	I/O	Input (L)	General purpose I/O port with pull down resistor
34	GP31	I/O	Input (L)	General purpose I/O port with pull down resistor
35	GP32	I/O	Input (L)	General purpose I/O port with pull down resistor Data 1 input/output for SD memory card
36	GP33	I/O	Input (L)	General purpose I/O port with pull down resistor Data 0 input/output for SD memory card
37	GP34	I/O	Input (L)	General purpose I/O port with pull down resistor Clock output for SD memory card
38	GP35	I/O	Input (L)	General purpose I/O port with pull down resistor Command input/output for SD memory card
39	GP36	I/O	Input (L)	General purpose I/O port with pull down resistor Data 3 input/output for SD memory card
40	GP37	I/O	Input (L)	General purpose I/O port with pull down resistor Data 2 input/output for SD memory card
41	DV _{DD}	-	-	Digital system power supply
42	DV _{SS}	-	-	Digital system ground. This pin must be connected to the 0V level.
43	REG1EXTR	AO	Undefined	Reserved pin for internal regulator. This pin must be left open.
44	DV _{DD} 15	AO	High	Capacitor connection pin for internal regulator

Pin No.	Pin name	I/O	State when "Reset"	Function
45	GP10	I/O	Input (L)	General purpose I/O port with pull down resistor UART1 data transmit
46	GP11	I/O	Input (L)	General purpose I/O port with pull down resistor UART1 data receive
47	GP12	I/O	Input (L)	General purpose I/O port with pull down resistor Clock control input 1
48	GP13	I/O	Input (L)	General purpose I/O port with pull down resistor Clock control input 2
49	DV _{DD}	-	-	Digital system power supply
50	DV _{SS}	-	-	Digital system ground. This pin must be connected to the 0V level.
51	RESB	I	-	IC reset input ("L"-active) This pin must be set low once after power is first applied.
52	SIFCK	I	Input	Host-I/F Data transmit clock input for serial communication 1
53	SIFDI	I/O	Input	Host-I/F Data input for serial communication 1
54	SIFDO	I/O	Input	Host-I/F Data output for serial communication 1 (CMOS or 3-State output)
55	SIFCE	I/O	Input	Host -I/F Enable signal input for serial communication 1 ("H"-active)
56	BUSYB	I/O	Input (L)	Host -I/F System busy signal output ("L"-active)
57	GP03	I/O	Input (L)	General purpose I/O port with pull down resistor USB device detection flag output
58	GP40	I/O	Input (L)	General purpose I/O port with pull down resistor
59	GP41	I/O	Input (L)	General purpose I/O port with pull down resistor
60	GP42	I/O	Input (L)	General purpose I/O port with pull down resistor
61	GP43	I/O	Input (L)	General purpose I/O port with pull down resistor
62	GP44	I/O	Input (L)	General purpose I/O port with pull down resistor
63	GP45	I/O	Input (L)	General purpose I/O port with pull down resistor
64	GP46	I/O	Input (L)	General purpose I/O port with pull down resistor
65	GP47	I/O	Input (L)	General purpose I/O port with pull down resistor
66	DV _{SS}	-	-	Digital system ground. This pin must be connected to the 0V level.
67	DV _{DD}	-	-	Digital system power supply
68	UDM1	I/O	-	USB data input/output 1 D- signal connection General purpose I/O port (GP22)
69	UDP1	I/O	-	USB data input/output 1 D+ signal connection General purpose I/O port (GP23)
70	DV _{SS}	-	-	Digital system ground. This pin must be connected to the 0V level.
71	UDM2	I/O	-	USB data input/output 2 D- signal connection General purpose I/O port (GP20)
72	UDP2	I/O	-	USB data input/output 2 D+ signal connection General purpose I/O port (GP21)
73	XV _{DD}	-	-	Oscillator power supply
74	XIN	I	Oscillation	X'tal oscillator connection
75	XOUT	O	Oscillation	X'tal oscillator connection
76	XV _{SS}	-	-	Oscillator ground. This pin must be connected to the 0V level.
77	AFILT	AO	Undefined	PLL2 charge pump output (for filter connection)
78	VV _{DD} 2	-	-	PLL2 power supply
79	VV _{DD} 3	-	-	PLL1 power supply
80	DV _{SS}	-	-	Digital system ground. This pin must be connected to the 0V level.
81	DV _{DD}	-	-	Digital system power supply
82	GP04	I/O	Input (L)	General purpose I/O port with pull down resistor IIC (master) clock output
83	GP05	I/O	Input (L)	General purpose I/O port with pull down resistor IIC (master) data input/output

Pin No.	Pin name	I/O	State when "Reset"	Function
84	GP06	I/O	Input (L)	General purpose I/O port with pull down resistor
85	GP07	I/O	Input (L)	General purpose I/O port with pull down resistor
86	GP14	I/O	Input (L)	General purpose I/O port with pull down resistor
87	TEST0	I	Input	Test input. This pin must be connected to the 0V level.
88	DV _{DD}	-	-	Digital system power supply
89	DV _{SS}	-	-	Digital system ground. This pin must be connected to the 0V level.
90	DV _{DD} 15	AO	High	Capacitor connection pin for internal regulator
91	JTRSTB	I	Input	JTAG reset input (Connect to pull-down resistor or 0V level in normal mode.)
92	JTCK	I	Input	JTAG clock input (Connect to pull-down resistor or 0V level in normal mode.)
93	JTDI	I	Input	JTAG data input (Connect to pull-down resistor or 0V level in normal mode.)
94	JTMS	I	Input	JTAG mode input (Connect to pull-down resistor or DV _{DD} level in normal mode.)
95	JTDO	O	Low	JTAG data output (Leave open in normal mode.)
96	JTRTCK	O	Low	JTAG return clock output (Leave open in normal mode.)
97	TEST1	I	Input	Test input. This pin must be connected to the 0V level.
98	AV _{DD} 1	-	-	Analog system power supply
99	AV _{SS} 1	-	-	Analog system ground. This pin must be connected to the 0V level.
100	LRREF	AO	AV _{DD} 1/2	Capacitor connection pin for reference voltage for Audio DAC and Electronic Volume.

<Note>

(1) For unused pins:

- The unused input pins must be connected to the GND (0V) level if there is no individual note in the above table.
- The unused output pins must be left open (No connection) if there is no individual note in the above table.
- The unused input/output pins must be connected to the GND (0V) or power supply pin for I/O block with internal pull down resistor OFF or be left open with internal pull down resistor ON when input pin mode or must be left open (No connection) when output pin mode if there is no individual note in the above table.

When you connect an I/O pin which is an input pin with internal pull-down resistor OFF at reset mode to the GND or power supply level, we recommend you to use pull-down resistor or pull-up resistor individually as fail-safe.

(2) For power supply pins:

- Same voltage level must be supplied to DV_{DD}, AV_{DD}1, AV_{DD}2, XV_{DD}, VV_{DD}2 and VV_{DD}3 power supply pins.
(Refer to "Allowable operating ranges".)

(3) For "Reset" condition:

- This IC is not reset only by making the RESB pin "Low".
Refer to "Power on and Reset control" for detail of "Reset" condition.

(4) For "Analog Source" unused pins (9 pin to 16 pin):

- The "Analog Source" unused pins (9 pin to 16 pin) must be connected to the GND (0V) level through the input coupling capacitor.

Block Diagram

Power on and Reset control

- Attention when power on

- (1) Reset Control

The RESB pin must be set to “Low” level to initialize the operating state of internal flash memory.

If the power is switched on when the RESB pin is “High” level, this IC may operate incorrectly because the internal flash memory is not initialized. In this case, this IC is not initialized even if a low level supplied to RESB pin. Therefore, the RESB pin must be set to “Low” level when power is first supplied.

- (2) Electronic Volume output

Because the output state of Electronic Volume pins is undefined when the power voltage is first supplied, it is necessary to mute the Electronic Volume output signals externally.

- (3) Input voltage for Input pins

You may input the voltage of 3.6V or less to each input terminal when the power supply is off. However, it is necessary to supply a regulated voltage to the power supply beforehand when more than 3.6V voltage is input to the 5V tolerant input pins.

Power ON/Power Down/Reset timing

Parameter	Symbol	min	typ	max	unit
Power down time	tPWD	10			ms
Power down voltage	vBOT	0		0.2	V
Reset time (Power on)	tRESW1	20			ms
Reset time (Normal) (*1)	tRESW2	1			ms

*1: The x'tal oscillation must be stable during tRESW2.

When the x'tal clock has been stopped by the command etc., the specification of tRESW2 could be longer than the value shown above, because it takes time that the x'tal oscillator becomes stable.

Host interface

The data transmission between this IC and Host controller is performed with SPI type synchronous SIO protocol. The transmission procedure is as follows.

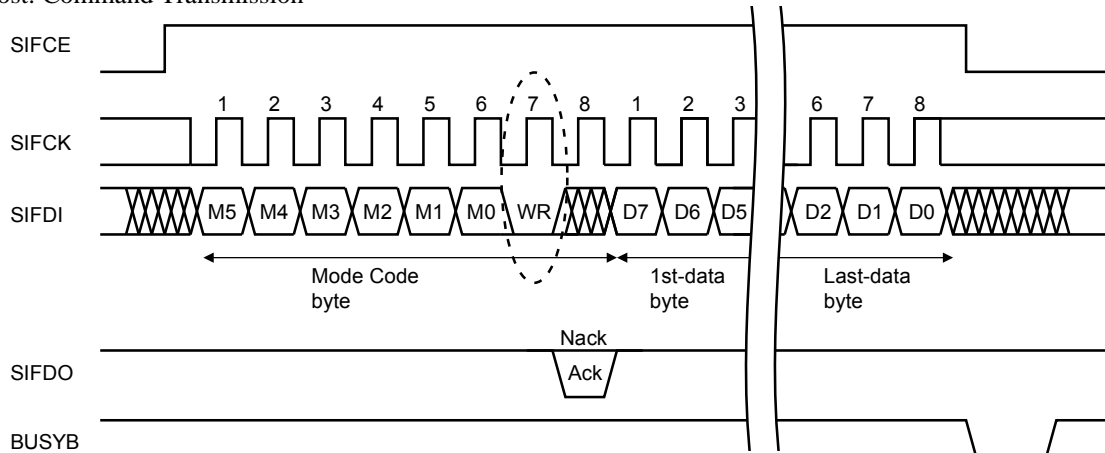

- Refer to the internal software specification of this IC about M5 to M0 code in Mode code transmission.
When the input data of M5 to M0 coincide to the data in the internal register, the SIFDO pin becomes to “Low” level (Ack) then the transmission is enabled.
When not coincide, the SIFDO pin keeps “High” level (Nack) then the transmission is not enabled.
- The seventh data in Mode code transmission shows whether the following procedure is the Command transmission or the Data reception. When the seventh data is “Low”, the following procedure is Command transmission. When the seventh data is “High”, the following procedure is Data reception.
- Attention because the specifications of transmission timings are different depending on the internal CPU’s operating speed modes (Low speed or Normal speed). Refer to the table in next page.

Communication Interface format between Host controller

Transmission/Reception format between Host controller

(1) Host: Command Transmission

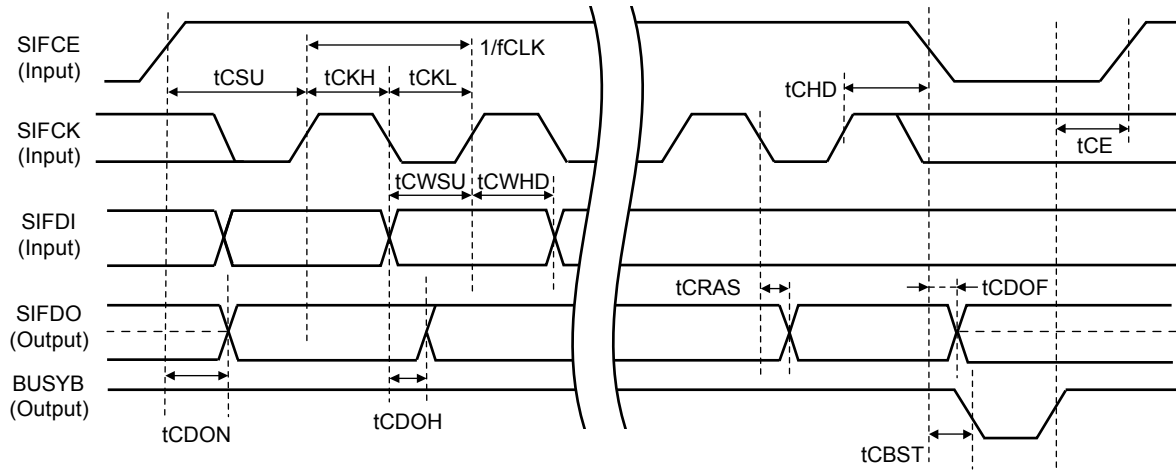

(2) Host: Data Reception

LC786800E

Communication Timing specification between Host controller

Parameter	Symbol	Pin names	min	typ	max	unit
SIFCK clock frequency	fCLK	SIFCK			3.3 0.725	MHz
SIFCK clock "H" level width	tCKH	SIFCK	150 690			ns

Turn on time for SIFDO *1	tCDON	SIFDO, SIFCE			100 100	ns
Turn off time for SIFDO *1	tCDOF	SIFDO, SIFCE			150 150	ns
BUSYB "L" level output delay time	tCBST	BUSYB			150 350	ns

Internal CPU operating speed mode Upper step : Normal speed
 Lower step : Low speed

*1: The tCDON and tCDOF specifications are for when the SIFDO pin is set to the 3-State mode.

LC786800E

USB Specification at $T_a = -40^{\circ}\text{C}$ to $+85^{\circ}\text{C}$, $V_{DD1} = 3.0\text{V}$ to 3.6V , $DV_{SS} = AV_{SS1} = AV_{SS2} = XV_{SS} = 0\text{V}$

Parameter	Symbol	Pin names	Conditions	min	typ	max	unit	
High-level input voltage	V_{IH} (USB)	UDM1, UDP1, UDM2, UDP2		2.0			V	
Low-level input voltage	V_{IL} (USB)					0.8		
Input leakage current	ILI		Output driver: OFF	-10.0		10.0	μA	
Differential input sensitivity	VDI		$ (UDP) - (UDM) $	0.2			V	
Common mode voltage range	VCM		Includes VDI range	0.8		2.5	V	
High-level output voltage	V_{OH} (USB)		Connect $15\text{k}\Omega \pm 5\%$ pull-down resistor to GND (0V).	2.8		3.6	V	
Low-level output voltage	V_{OL} (USB)		Connect $1.5\text{k}\Omega \pm 5\%$ pull-up resistor to V_{DD1} .	0		0.3	V	
Crossover voltage	VCR			1.3		2.0	V	
USB data rising time	TUR		CL = 50pF		4.0		20.0	ns
USB data falling time	TUF				4.0		20.0	

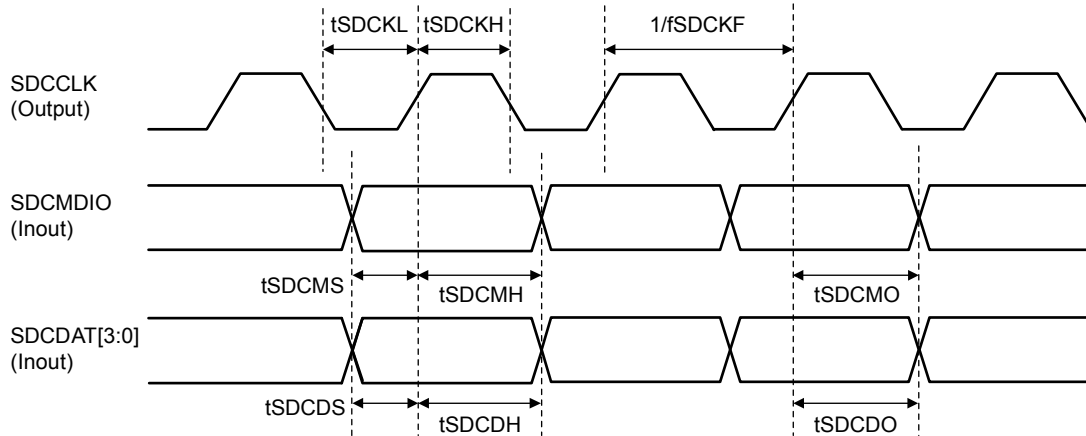

Example circuit for USB application

* The value of resistors and capacitors in this circuit might be needed to be adjusted for each application.

SD Memory Card Interface

SD Memory Card Input/Output Timing specification

* Relationship between signal name and pin name

SDCCLK : GP34 SDCMDIO : GP35 SDCDAT [3] : GP36
 SDCDAT [2] : GP37 SDCDAT [1] : GP32 SDCDAT [0] : GP33

Parameter	Symbol	Pin names	min	typ	max	unit
SDCCLK clock frequency	f_{SDCKF}	SDCCLK		6.0		MHz
SDCCLK clock "H" level width	t_{SDCKH}	SDCCLK		83.3		ns
SDCCLK clock "L" level width	t_{SDCKL}	SDCCLK		83.3		ns
Setup time for command input	t_{SDCMS}	SDCMDIO, SDCCLK	30.0			ns
Hold time for command input	t_{SDCMH}	SDCMDIO, SDCCLK	30.0			ns
Command output valid time	t_{SDCMO}	SDCMDIO, SDCCLK			30.0	ns
Setup time for data input	t_{SDCDS}	SDCDAT [3:0], SDCCLK	30.0			ns
Hold time for data input	t_{SDCDH}	SDCDAT [3:0], SDCCLK	30.0			ns
Data output valid time	t_{SDCDO}	SDCDAT [3:0], SDCCLK			30.0	ns

Note: Internal CPU (ARM7) must be set to normal mode. Never use the SD Memory Card interface at the internal CPU's Low speed mode.

LC786800E

Audio Data Input/Output Function

AC Electrical Characteristics at $T_a = 25^\circ\text{C}$, $V_{DD1} = 3.3\text{V}$, $DV_{SS} = AV_{SS1} = AV_{SS2} = XV_{SS} = 0\text{V}$,

$F_s = 44.1\text{kHz}$, Audio Signal Frequency: 1kHz, Measurement Range: 10Hz to 20kHz

LC786800E

Digital Audio Data Interface

Digital Audio Interface Format

	Mode	Data Length	Slot Length	Fs384 clock
Input	IIS	16bit	32fs, 48fs, 64fs	Internal clock External input clock
	MSB first right justified MSB first left justified	24bit		
Output	IIS	16bit	32fs, 48fs, 64fs	Output internal 384fs clock
	MSB first right justified MSB first left justified	24bit		

Used pins

	LRCK	BCK	DATA	Fs384 clock	De-emphasis
Input	GP30	GP31	GP32	GP33	GP14, GP46
	GP40	GP41	GP42	GP43	
	GP52	GP51	GP50	GP53	
Output	GP30	GP31	GP32	GP33	-
	GP40	GP41	GP42	GP43	
	GP52	GP51	GP50	GP53	

Note : There is a priority level about Digital Audio input setting for the pins from GP30 to GP33 and the pins from GP40 to GP43 and the pins from GP50 to GP53. The priority level is as follows.

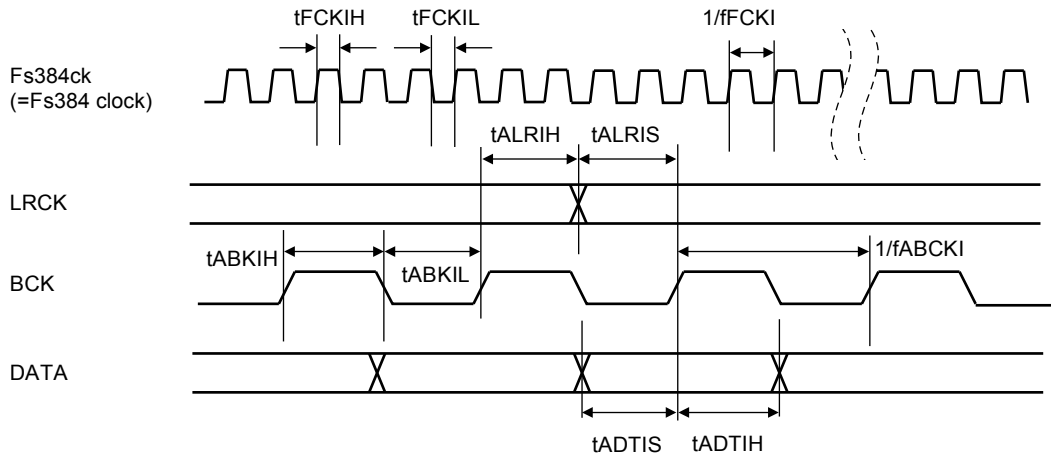

(1) GP30 to GP33 > (2) GP40 to GP43 > (3) GP50 to GP53

Only the setting for the pins from GP30 to GP33 will become effective even if all the pins above are set to be the Digital Audio input pins at the same time. Set the Digital Audio input pins only to either of the pins from GP30 to GP33 or the pins from GP40 to GP43 or the pins from GP50 to GP53 if necessary.

Others

- Audio output can support 3 types of Fs (32kHz/44.1kHz/48kHz) when 12MHz is used to the oscillator.
When 16.9344MHz is used to the oscillator, only Fs=44.1kHz is supported.
- During external audio input, emphasis signal is input from GP14/GP46.

Digital Audio Data Input timing

Parameter	Symbol	Pin Names	min	typ	max	unit
Fs384 clock frequency	f_{FCKI}	Fs384ck			20.0	MHz
Fs384 clock "H" level width	t_{FCKIH}	Fs384ck	20			ns
Fs384 clock "L" level width	t_{FCKIL}	Fs384ck	20			ns
Bit clock frequency	f_{ABCKI}	BCK			3.3	MHz
Bit clock "H" level width	t_{ABKIH}	BCK	120			ns
Bit clock "L" level width	t_{ABKIL}	BCK	120			ns
Setup time for LRCK input	t_{ALRIS}	LRCK, BCK	30			ns
Hold time for LRCK input	t_{ALRIH}	LRCK, BCK	30			ns
Setup time for DATA input	t_{ADTIS}	DATA, BCK	30			ns
Hold time for DATA input	t_{ADTIH}	DATA, BCK	30			ns

LC786800E

Digital Audio Data Output timing

Parameter	Symbol	Pin Names	min	typ	max	unit
Fs384 clock frequency	fFCKO	Fs384ck		16.9344 *1		MHz
Fs384 clock "H" level width	tFCKOH	Fs384ck		29.5 *1		ns
Fs384 clock "L" level width	tFCKOL	Fs384ck		29.5 *1		ns
Bit clock frequency	fABCKO	BCK		2.1168 *1		MHz
Bit clock "H" level width	tABKOH	BCK		236.2 *1		ns
Bit clock "L" level width	tABKOL	BCK		236.2 *1		ns
LRCK output delay time	tDL1	LRCK, Fs384ck	0		50	ns
BCK output delay time	tDL2	BCK, Fs384ck	0		50	ns
DATA output delay time	tDL3	DATA, Fs384ck	0		50	ns

*1: In case of setting the 48-slot length for output format as $F_s = 44.1\text{kHz}$.

LC786800E

Internal Voltage Regulator at $T_a = -40^{\circ}\text{C}$ to $+85^{\circ}\text{C}$, $DV_{SS} = AV_{SS1} = AV_{SS2} = XV_{SS} = 0\text{V}$

Parameter	Symbol	Condition	min	typ	max	unit
Output voltage	DV_{DD15}	$V_{DD1} = 3.0\text{V}$ to 3.6V	1.35	1.50	1.65	V
Load current	I_{ope}	$V_{DD1} = 3.3\text{V}$			200	mA

Note : The specification of “load current” above is sum of the load current of two internal voltage regulator.

Example circuit for Regulator

* Same circuit need to be mounted both for two regulator pins. (No.44 and No.90)

* The capacitor C1 must be greater than $50\mu\text{F}$ and low Secure $50\mu\text{F}$ or more for low ESR and the capacity value in the range of the operating temperature so that there is a possibility of the oscillation when the capacity value changes by the temperature change etc.

(The recommended value is $100\mu\text{F}$.)

Oscillator

Example circuit for Oscillator

(1) XIN/XOUT: 12.0000MHz or 16.9344MHz

- For System Main clock and USB control
- Recommended Oscillator

Nihon Dempa Kogyo Co., Ltd.

Type	Oscillation frequency	Recommended value
NX5032GA	12MHz	$R_{d1} = 0\Omega$, $C1 = 4\text{pF}$
NX8045GB	12MHz	$R_{d1} = 0\Omega$, $C1 = 4\text{pF}$
AT51-CD2	16.9344MHz	$R_{d2} = 0\Omega$, $C2 = 8\text{pF}$

<Notes>

- Because the characteristics of oscillator could be changed according to the circuit board, ask evaluation with the individual original circuit board to the oscillator maker.
- The precision of oscillator used in XIN/XOUT should meet the USB standard.
- If oscillation clock is disturbed by noise or by the other factors, it may lead to operation failure. Hence, make sure to connect resistor and capacitor for oscillation circuit as close as XIN/XOUT and the wire should be as short as possible. Also you need to select parts with caution so as to obtain stable external constant value within the guaranteed operating temperature range because the variation of external constant due to temperature change could affect the oscillation precision.
- Concerning about internal circuit for XIN/XOUT, refer to the “Analog Pin Internal Equivalent Circuits” section.

PLL circuit

Example of PLL circuit

• PLL

LC786800 includes PLL1 and PLL2.

The functions of PLL1/ PLL2 varies depends on the oscillator connected to XIN/XOUT.

	PLL1	PLL2
When 12MHz oscillator is used	For system clock generation	For audio clock generation
When 16.9344MHz oscillator is used	Unused	For system clock generation

• External filter constant for PLL2

	PLL2 constant
When 12MHz oscillator is used	$Rp1 = 4.7k\Omega / Cp1 = 3300pF / Cp2 = 220pF$
When 16.9344MHz oscillator is used	$Rp1 = 4.7k\Omega / Cp1 = 0.033\mu F / Cp2 = 2200pF$

<Caution>

- This PLL filter circuit is for resistor (Rp1), capacitance (Cp1, Cp2), audio generation/ system clock generation connected to AFILT. If oscillation clock is disturbed by noise or by the other factors, it may lead to operation failure. Hence, make sure to connect resistor and capacitor that constitute filter circuit as close as AFILT and the wire should be as short as possible. Also if filter constant changes due to temperature change, oscillation of PLL may become unstable and the following problem may occur.

(1) 12MHz oscillator

Due to unstable audio playback clock, audio playback is affected with unstable audio signal input (ADC operation) and output (various filter, DAC operation).

(2) 16.9344MHz oscillator

As the internal system clock used in built-in CPU and USB becomes unstable, the LSI operation is affected as well.

Hence, you need to select parts with caution so as to obtain stable filter constant value within the guaranteed operating temperature range.

- See the section on “Analog Pin Internal Equivalent Circuits” for the internal configuration of AFILT.
