

SANYO Semiconductors

DATA SHEET

An ON Semiconductor Company

LC786960E

CMOS LSI

Compact Disc Player IC

Overview

The LC786960E integrates ARM7TDMI-S™, CD servo control, CD signal processing, compressed audio decode processing, audio signal processing, USB host processing, SD memory card host processing and a flash memory to store the program for ARM7TDMI-S™ and various data in a package. Furthermore, various kinds of interface functions such as SIO, UART etc. reduce the external main controller's processing load and make high performance and much functional CD player system, using with less components.

Features

- RF signal processing for CD-DA/R/RW, servo control, and EFM signal processing
- MP3*, WMA*, AAC* decoder processing
- Sampling rate convertor, High frequency compensation filter and other various audio signal processing
- USB host function (Full speed as 12Mbps), SD memory card host function
- ARM7TDMI-S™ as internal CPU core, flash memory for program and various data storage
- Operating voltage: 3.3V typical
- Operating temperature: -40°C to +85°C
- Packages: QIP100E (14 × 20)

ARM is a registered trademark of ARM Limited.

* MP3(MPEG Layer-3 Audio Coding)

MPEG Layer-3 audio coding technology licensed from Fraunhofer IIS and Thomson.

Supply of this product does not convey license under the relevant intellectual property of Thomson and/or Fraunhofer Gesellschaft nor imply any right to use this product in any finished end user or ready-to-use final product. An independent license for such use is required.

For details, please visit <http://mp3licensing.com/>.

* Windows Media Audio

Windows Media™ is a trademark and a registered trademark in the United States and other countries of United States Microsoft Corporation.

* AAC

Advanced Audio Coding

* This product incorporates technology licensed from Silicon Storage Technology Inc.

■ Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment. The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for new introduction or other application different from current conditions on the usage of automotive device, communication device, office equipment, industrial equipment etc. , please consult with us about usage condition (temperature, operation time etc.) prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.

■ Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

SANYO Semiconductor Co., Ltd.

Detail of Functions

[CD DSP functions]

<Playback functions>

- Playback mode: CLV playback/Jitter free playback (VCEC)
- Playback speed: Normal speed, double speed

<RF Processing block>

- RF system: AGC, CD-R and CD-R/W playback support, peak hold, bottom hold
- Error system: TE signal generation, FE signal generation
- Detection: Track count signal, Jitter, Defect (black, mirror)
- LASER power controller (APC)
- DC offset voltage cancellation

<Servo control block>

- All servo systems as tracking, focus, sled and spindle are implemented with digital processing.
- Automatic adjustment functions: focus gain, focus bias, focus offset, tracking gain, tracking offset and tracking balance
- Shock detection / Interruption detection

<CD signal processing block>

- EFM signal synchronization detection, protection and interpolation
- Error detection, correction (C1=double, C2=quadruple/double)
- Jitter margin ± 19 frames

<CD TEXT processing block>

- Buffers CD-TEXT data
- Starts buffering desired ID3/ID4 of CD-TEXT data.

<CD-ROM processing block>

- CD-ROM decoding (Mode1, Mode2 <form1, form2>)
- Outputs CD-ROM decoded data

[Compressed audio decode functions]

- MP3 decode (ISO/IEC 11172-3, ISO/IEC 13818-3)
 - Sampling rate support: MPEG1-Layer1/2/3 (32kHz, 44.1kHz, 48kHz)
MPEG2-Layer1/2/3 (16kHz, 22.05kHz, 24kHz)
MPEG2.5-Layer3 (8kHz, 11.025kHz, 12kHz)
 - Bit rate support: All Bit Rate (Variable Bit Rate support)
 - MPEG header read support
- WMA decode (Version 9 standard)
 - Sampling rate support: 8kHz, 11.025kHz, 16kHz, 22.05kHz, 32kHz, 44.1kHz, 48kHz
 - Bit rate support: 5kbps to 384kbps (Variable Bit Rate support)
- AAC decode (ISO/IEC 14496-3, ISO/IEC 13818-7)
 - Profile: MPEG4-AAC-LowComplexity
 - Sampling rate support: 8kHz, 11.025kHz, 12kHz, 16kHz, 22.05kHz, 24kHz, 32kHz, 44.1kHz, 48kHz
 - Bit rate support: Monaural 8kbps to 160kbps (Variable bit rate support)
Stereo 16kbps to 320kbps (Variable bit rate support)
- Decodes both the compressed data read from the disc and input from outside through the interface pins

[Audio processing functions]

<Audio processing block>

- Sampling rate converter (SRC) for compressed audio data playback
- High frequency compensation filter for compressed audio data playback
- Interpolation (CD-DA only)
- Digital attenuator
- Bilingual function
- Mute function (-12dB, $-\infty$)
- De-emphasis filter
- Bass / Treble filter

<Digital filter and D/A convertor processing block>

- Eight-fold over-sampling digital filter (24bit)
- One bit DAC (tertiary $\Delta\Sigma$ noise shaper type)
- Secondary LPF for audio output

<Interface block>

- Allows external audio data supply to the digital filter and D/A converter (Uses four signals)
- Various external audio data output format
IIS (48fs/64fs), MSB first right justified (32fs/48fs/64fs), 16 bit data length

[External interface functions]

<USB host control block>

- Open Host Controller Interface 1.0a
- Universal Serial Bus Specification 1.1
Supports up to Full speed (12MHz)for USB2.0
- Supports four kinds of transfer type (Control/Bulk/Interrupt/Isochronous)

<SD memory card host control block>

- Multimedia Card Specification v2.11
- Secure Digital Memory Card Physical Layer Specification v0.96
- * Individual contract is necessary to use SD memory card controller. For detail, please contact to us.

[Internal Microcontroller functions]

<Sequencer control>

- CD, USB, SD memory card playback control
Servo control, CD-ROM/USB/SD file analysis, etc. –

<Communication control between main controller>

- Communication format: SIO

<Peripheral interface block>

- GPIO port 27ports maximum (Shared with other functions. Several pins are 5V tolerant.)
- External interrupt pins 4pins maximum (Shared with other functions.)
- Serial interface
 - SIO clock synchronized full duplex (3 lines) 2 channel
 - UART full duplex 2 channel
 - IIC master function 1 channel

<Program memory block>

- Flash memory
Program version up from the external media (CD-ROM/USB)or main controller is available.

<Others>

- Watch Dog Timer
Notify to outside from the pin or reset internally.
- Power management
2 kinds of sleep mode
 - (1) Only CPU core operates at slow clock and clocks for other blocks are stopping.
 - (2) All clocks are stopping.

[Others]

<Internal power supply>

- 1.5V regulator for internal blocks

LC786960E

Specifications

Absolute Maximum Ratings at $T_a = 25^\circ\text{C}$, $DV_{SS} = AV_{SS} = LRV_{SS} = XV_{SS1} = XV_{SS2} = VV_{SS1} = VV_{SS2} = 0V$

Parameter	Symbol	Pin names	Conditions	Ratings	Unit
Maximum supply voltage	$V_{DD\ max}$	DV_{DD} , AV_{DD} , LRV_{DD} , XV_{DD1} , XV_{DD2} , UV_{DD} , VV_{DD1} , VV_{DD2} , VV_{DD3}		-0.3 to +3.95	V
Input voltage 1	V_{IN1}	Input pins other than V_{IN2}		-0.3 to $DV_{DD}+0.3$	V
Input voltage 2	V_{IN2}	RESB, SIFCK, SIFDI, SIFDO, SIFCE, BUSYB, GP03, GP04, GP05, GP06, GP07, GP10, GP11, GP12, JTRSTB, JTCK, JTDI, JTMS		-0.3 to +5.6	V
Output voltage	V_{OUT}			-0.3 to $DV_{DD}+0.3$	V
Allowable power dissipation	$P_d\ max$		$T_a \leq 85^\circ\text{C}$ Mounted reference PCB (*)	519	mW
Operating temperature	T_{opr}			-40 to +85	$^\circ\text{C}$
Storage temperature	T_{stg}			-40 to +125	$^\circ\text{C}$

(*)Reference PCB: 114.3mm×76.1mm×1.6mm, glass epoxy resin

Allowable Operating Ranges at $T_a = -40$ to $+85^\circ\text{C}$,

$DV_{SS} = AV_{SS} = LRV_{SS} = XV_{SS1} = XV_{SS2} = VV_{SS1} = VV_{SS2} = 0V$

Parameter	Symbol	Pin names	Conditions	min	typ	max	Unit
Supply voltage	V_{DD1}	DV_{DD} , AV_{DD} , LRV_{DD} , XV_{DD1} , XV_{DD2} , UV_{DD} , VV_{DD1} , VV_{DD2} , VV_{DD3}		3.00		3.60	V
High-level input voltage	$V_{IH(1)}$	RESB, SIFCK, SIFDI, SIFDO, SIFCE, BUSYB, GP03, GP04, GP05, GP06, GP07, GP10, GP11, GP12, JTMS, JTRSTB, JTCK, JTDI	Schmitt	2.00		5.50	V
	$V_{IH(2)}$	GP13, GP30, GP31, GP32, GP33, GP34, GP35, GP36, GP37, GP43, GP44, GP45, GP50, GP51, GP52, GP53	Schmitt	2.00		V_{DD1}	V
Low-level input voltage	$V_{IL(1)}$	RESB, SIFCK, SIFDI, SIFDO, SIFCE, BUSYB, GP03, GP04, GP05, GP06, GP07, GP10, GP11, GP12, JTMS, JTRSTB, JTCK, JTDI	Schmitt	0		0.80	V
	$V_{IL(2)}$	GP13, GP30, GP31, GP32, GP33, GP34, GP35, GP36, GP37, GP43, GP44, GP45, GP50, GP51, GP52, GP53, MODE0, MODE1, MODE2	Schmitt	0		0.80	V

Pin Assignment

LC786960E

Pin Description

Pin No.	Pin name	I/O	State when "Reset"	Function
1	EFMIN	AI	Input	RF signal input
2	RFOUT	AO	Undefined	RF signal output
3	LPF	AO	Undefined	RF signal DC level detection low-pass filter capacitor connection
4	PHLPF	AO	Undefined	Defect detection low-pass filter capacitor connection
5	AIN	AI	Input	A signal input
6	CIN	AI	Input	C signal input
7	BIN	AI	Input	B signal input
8	DIN	AI	Input	D signal input
9	SLCISSET	AI	Input	SLCO output current setting resistor connection
10	RFMON	AO	Undefined	IC internal analog signal monitor
11	VREF	AO	AV _{DD} /2	VREF voltage output
12	JITTC	AO	Undefined	Jitter detection capacitor connection
13	EIN	AI	Input	E signal input
14	FIN	AI	Input	F signal input
15	TE	AO	Undefined	TE signal output
16	TEIN	AI	Input	TE signal input used for TES signal generation
17	LDD	AO	Undefined	Laser power control signal output
18	LDS	AI	Input	Laser power detection signal input
19	AV _{SS}	-	-	Analog system ground. This pin must be connected to the 0V level.
20	AV _{DD}	-	-	Analog system power supply
21	FDO	AO	AV _{DD} /2	Focus control signal output
22	TDO	AO	AV _{DD} /2	Tracking control signal output
23	SLDO	AO	AV _{DD} /2	Sled control signal output
24	SPDO	AO	AV _{DD} /2	Spindle control signal output
25	VV _{DD} 1	-	-	EFMPLL power supply
26	PDOUT1	AO	Undefined	EFMPLL charge pump output 1
27	PDOUT0	AO	Undefined	EFMPLL charge pump output 0
28	PCNCNT	AI	Input	EFMPLL charge pump control voltage input
29	PCKIST	AI	Input	EFMPLL charge pump current setting resistor connection pin
30	VV _{SS} 1	-	-	EFMPLL ground. This pin must be connected to the 0V level.
31	GP10	I/O	Input (L)	General purpose I/O port with pull down resistor UART1 data transmit
32	GP11	I/O	Input (L)	General purpose I/O port with pull down resistor UART1 data receive
33	GP12	I/O	Input (L)	General purpose I/O port with pull down resistor Clock control input 1
34	GP13	I/O	Input (L)	General purpose I/O port with pull down resistor Clock control input 2
35	DV _{DD}	-	-	Digital system power supply
36	DV _{SS}	-	-	Digital system ground. This pin must be connected to the 0V level.
37	GP43	I/O	Input (L)	General purpose I/O port with pull down resistor
38	GP44	I/O	Input (L)	General purpose I/O port with pull down resistor
39	GP45	I/O	Input (L)	General purpose I/O port with pull down resistor
40	DV _{DD}	-	-	Digital system power supply
41	DV _{SS}	-	-	Digital system ground. This pin must be connected to the 0V level.
42	DV _{DD} 15	AO	High	Capacitor connection pin for internal regulator
43	GP50	I/O	Input (L)	General purpose I/O port with pull down resistor
44	GP51	I/O	Input (L)	General purpose I/O port with pull down resistor
45	GP52	I/O	Input (L)	General purpose I/O port with pull down resistor
46	GP53	I/O	Input (L)	General purpose I/O port with pull down resistor

Pin No.	Pin name	I/O	State when "Reset"	Function
47	GP30	I/O	Input (L)	General purpose I/O port with pull down resistor
48	GP31	I/O	Input (L)	General purpose I/O port with pull down resistor
49	GP32	I/O	Input (L)	General purpose I/O port with pull down resistor Data 1 input/output for SD memory card
50	GP33	I/O	Input (L)	General purpose I/O port with pull down resistor Data 0 input/output for SD memory card
51	GP34	I/O	Input (L)	General purpose I/O port with pull down resistor Clock output for SD memory card
52	GP35	I/O	Input (L)	General purpose I/O port with pull down resistor Command input/output for SD memory card
53	GP36	I/O	Input (L)	General purpose I/O port with pull down resistor Data 3 input/output for SD memory card
54	GP37	I/O	Input (L)	General purpose I/O port with pull down resistor Data 2 input/output for SD memory card
55	MODE0	I	Input	LSI mode set pin 0 This pin must be connected to the 0V level.
56	MODE1	I	Input	LSI mode set pin 1 This pin must be connected to the 0V level.
57	DV _{DD}	-	-	Digital system power supply
58	DV _{SS}	-	-	Digital system ground. This pin must be connected to the 0V level.
59	RESB	I	-	IC reset input ("L"-active) This pin must be set low once after power is first applied.
60	SIFCK	I	Input	Host-I/F Data transmit clock input for serial communication 1
61	SIFDI	I/O	Input	Host-I/F Data input for serial communication 1
62	SIFDO	I/O	Input	Host-I/F Data output for serial communication 1 (CMOS or 3-State output)
63	SIFCE	I/O	Input	Host -I/F Enable signal input for serial communication 1 ("H"-active)
64	BUSYB	I/O	Input (L)	Host -I/F System busy signal output ("L"-active)
65	GP03	I/O	Input (L)	General purpose I/O port with pull down resistor USB device detection flag output
66	GP04	I/O	Input (L)	General purpose I/O port with pull down resistor IIC (master) clock output
67	GP05	I/O	Input (L)	General purpose I/O port with pull down resistor IIC (master) data input/output
68	GP06	I/O	Input (L)	General purpose I/O port with pull down resistor
69	GP07	I/O	Input (L)	General purpose I/O port with pull down resistor
70	XV _{DD1}	-	-	Oscillator power supply
71	XIN	I	Oscillation	12MHz oscillator connection
72	XOUT	O	Oscillation	12MHz oscillator connection
73	XV _{SS1}	-	-	Oscillator ground. This pin must be connected to the 0V level.
74	UDM	I/O	-	USB data input/output D- signal connection
75	UDP	I/O	-	USB data input/output D+ signal connection
76	UV _{DD}	-	-	USB power supply
77	VV _{DD2}	-	-	System PLL power supply
78	VV _{SS2}	-	-	System PLL ground. This pin must be connected to the 0V level.
79	AFILT	AO	Undefined	Audio PLL charge pump output
80	VV _{DD3}	-	-	Audio PLL power supply
81	MODE2	I	Input	LSI mode set pin 2 This pin must be connected to the 0V level.

Pin No.	Pin name	I/O	State when "Reset"	Function
82	JTRSTB	I	Input	JTAG reset input (Connect to pll-down resistor or 0V level in normal mode.)
83	JTCK	I	Input	JTAG clock input (Connect to pll-down resistor or 0V level in normal mode.)
84	JTDI	I	Input	JTAG data input (Connect to pll-down resistor or 0V level in normal mode.)
85	JTMS	I	Input	JTAG mode input (Connect to pll-up resistor or DV _{DD} level in normal mode.)
86	JTDO	O	Low	JTAG data output (Leave open in normal mode.)
87	JTRTCK	O	Low	JTAG return clock output (Leave open in normal mode.)
88	DV _{DD}	-	-	Digital system power supply
89	DV _{SS}	-	-	Digital system ground. This pin must be connected to the 0V level.
90	DV _{DD} 15	AO	High	Capacitor connection pin for internal regulator
91	XV _{SS} 2	-	-	Oscillator ground. This pin must be connected to the 0V level.
92	X16OUT	O	Oscillation	16.9344MHz oscillator connection
93	X16IN	I	Oscillation	16.9344MHz oscillator connection
94	XV _{DD} 2	-	-	Oscillator power supply
95	LRV _{DD}	-	-	Audio LPF power supply
96	LCHO	AO	LRV _{DD} /2	Audio Lch data output
97	LRREF	AO	LRV _{DD} /2	Reference voltage for audio LPF
98	RCHO	AO	LRV _{DD} /2	Audio Rch data output
99	LRV _{SS}	-	-	Audio LPF ground. This pin must be connected to the 0V level.
100	SLCO	AO	Undefined	Slice Level Control output

<Note>

(1) For unused pins:

- The unused input pins must be connected to the GND (0V) level if there is no individual note in the above table.
- The unused output pins must be left open (No connection) if there is no individual note in the above table.
- The unused input/output pins must be connected to the GND (0V) or power supply pin for I/O block with internal pull down resistor OFF or be left open with internal pull down resistor ON when input pin mode or must be left open (No connection) when output pin mode if there is no individual note in the above table.

When you connect an I/O pin which is an input pin without internal pull-down resistor at reset mode to the GND or power supply level, we recommend you to use pull-down resistor or pull-up resistor individually as fail-safe.

(2) For power supply pins:

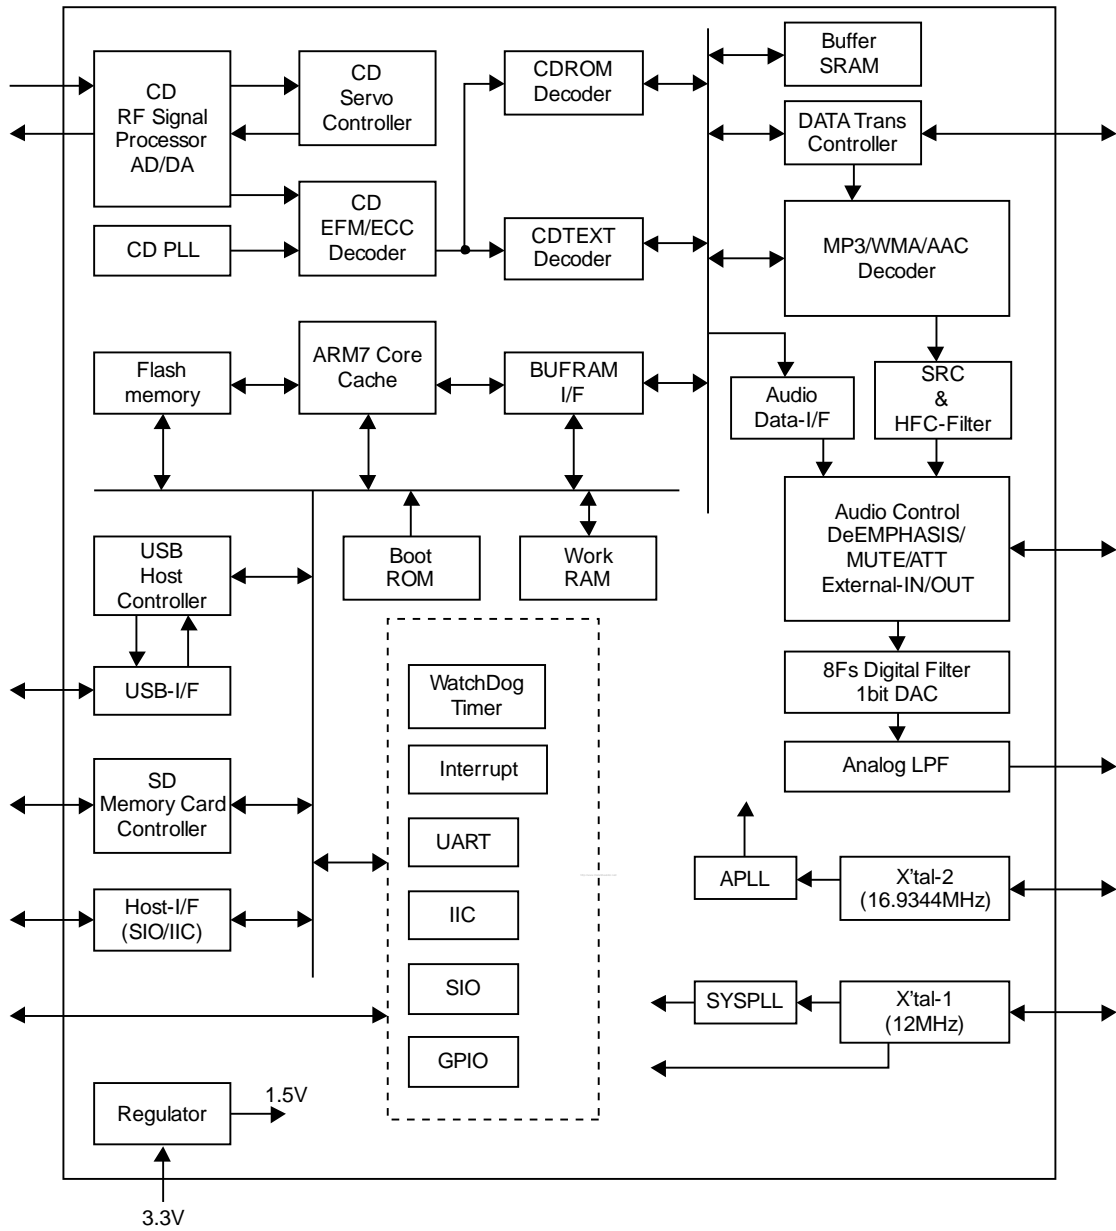

- Same voltage level must be supplied to DV_{DD}, AV_{DD}, XV_{DD}1, XV_{DD}2, VV_{DD}1, VV_{DD}2, VV_{DD}3, UV_{DD} and LRV_{DD} power supply pins.

(Refer to "Allowable operating ranges".)

(3) For "Reset" condition:

- This LSI is not reset only by making the RESB pin "Low".
Refer to "Power on and Reset control" for detail of "Reset" condition.

Block Diagram

Power on and Reset control

• Attention when power on

The RESB pin must be set to “Low” level to initialize the operating state of internal flash memory.

If the power is on during the RESB pin is “High” level, this LSI may operate incorrectly because the internal flash memory is not initialized. In this case, this LSI is not initialized even if a low level supplied to RESB pin.

Therefore, the RESB pin must be set to “Low” level when power is first supplied.

You may input the voltage of 3.6V or less to each input pin when the power supply is off. However, it is necessary to supply a regulated voltage to the power supply pin beforehand when more than 3.6V voltage is input to the 5V tolerant input pins.

Power ON/Power Down/Reset timing

Parameter	Symbol	min	typ	max	unit
Power down time	tPWD	10			ms
Power down voltage	vBOT	0		0.2	V
Reset time (Power on)	tRESW1	20			ms
Reset time (Normal) (*1)	tRESW2	1			ms

*1: The specification of t_{RESW2} above is the time defined while steady the X16 clock and having oscillated.

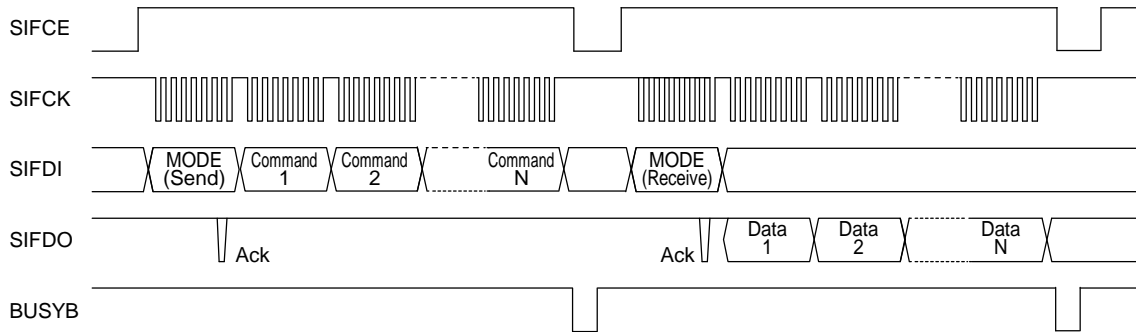

When the X16 clock has been stopped by the command etc. , the specification of t_{RESW2} could be larger than the value shown above, because it takes time that the X16 oscillator becomes stable.

Host interface

The data transmission between this LSI and Host controller is performed with SPI type synchronous SIO protocol. The transmission procedure is as follows.

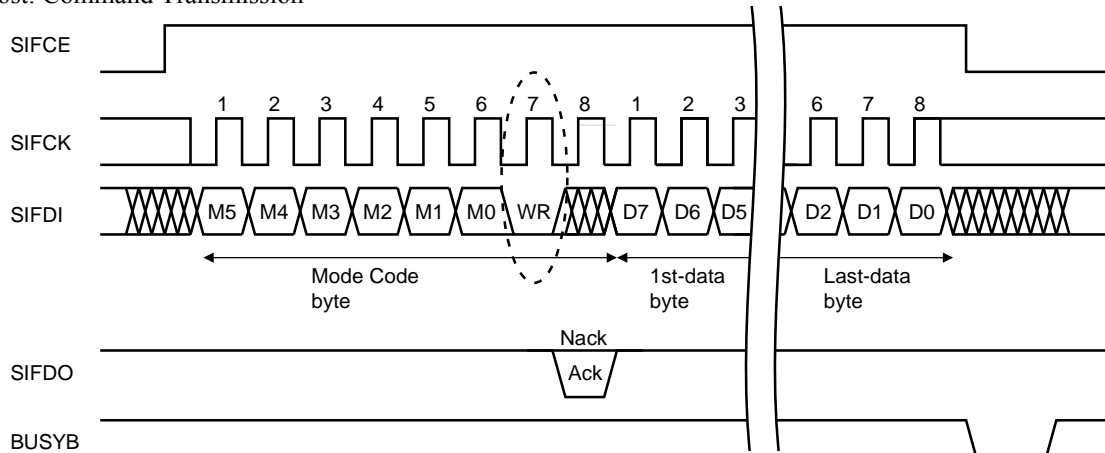

- Refer to the internal software specification of this LSI about M5 to M0 code in Mode code transmission. When the input data of M5 to M0 coincide to the data in the internal register, the SIFDO pin becomes to “Low” level (Ack) then the transmission is enabled. When not coincide, the SIFDO pin keeps “High” level (Nack) then the transmission is not enabled.
- The seventh data in Mode code transmission shows whether the following procedure is the Command transmission or the Data reception. When the seventh data is “Low”, the following procedure is Command transmission. When the seventh data is “High”, the following procedure is Data reception.
- Attention because the specifications of transmission timings are different depending on the internal CPU’s operating speed modes (Low speed or Normal speed). Refer to the table in next page.

Communication Interface format between Host controller

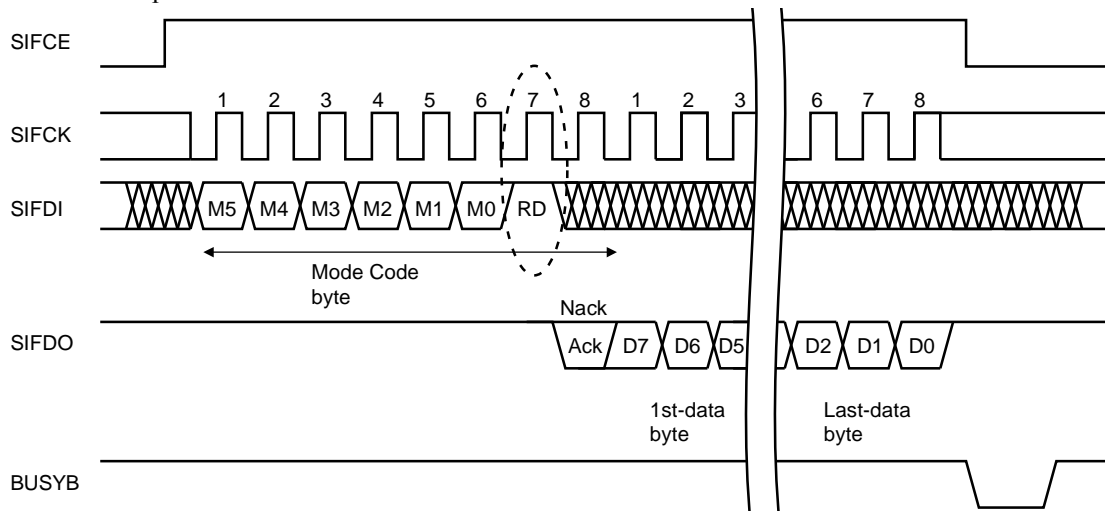

Transmission/Reception format between Host controller

(1) Host: Command Transmission

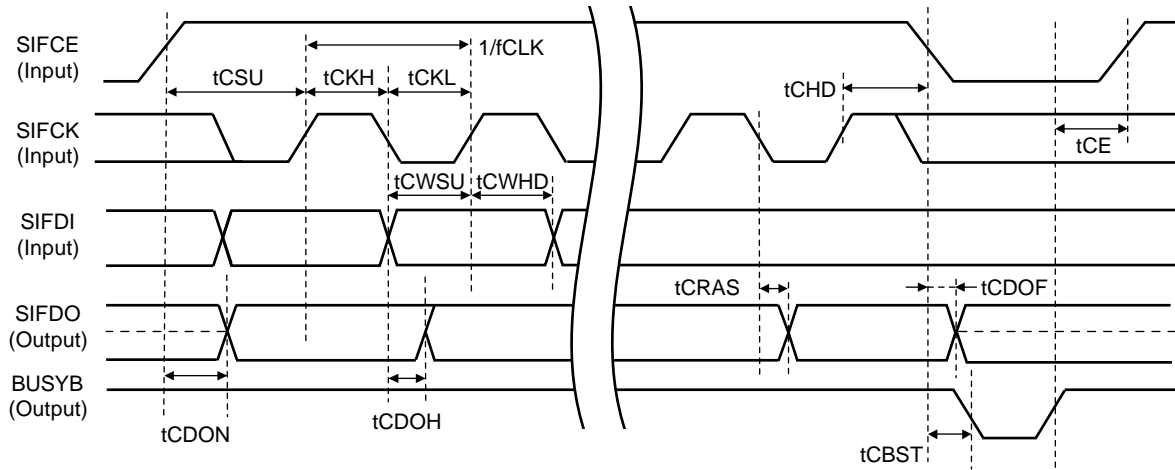

(2) Host: Data Reception

LC78690E

Communication Timing specification between Host controller

Parameter	Symbol	Pin names	min	typ	max	unit
SIFCK clock frequency	fCLK	SIFCK			3.3 0.725	MHz
SIFCK clock "H" level width	tCKH	SIFCK	150 690			ns
SIFCK clock "L" level width	tCKL	SIFCK	150 690			ns
Transfer start enable time	tCE	BUSYB, SIFCE	0 0			ns
Setup time for transfer start	tCSU	SIFCE, SIFCK	100 200			ns
Hold time for transfer end	tCHD	SIFCE, SIFCK	100 200			ns
Setup time for SIFDI	tCWSU	SIFDI, SIFCK	75 75			ns
Hold time for SIFDI	tCWHD	SIFDI, SIFCK	75 200			ns
Output delay time for SIFDO "H"	tCDOH	SIFDO, SIFCK			100 350	ns
Output delay time for SIFDO	tCRAS	SIFDO, SIFCK			100 350	ns
Turn on time for SIFDO *1	tCDON	SIFDO, SIFCE			100 100	ns
Turn off time for SIFDO *1	tCDOF	SIFDO, SIFCE			150 150	ns
BUSYB "L" level output delay time	tCBST	BUSYB			150 350	ns

Internal CPU operating speed mode Upper step : Normal speed
Lower step : Low speed

*1: The tCDON and tCDOF specifications are for when the SIFDO pin is set to the 3-State mode.

LC786960E

USB Specification at $T_a = -40^{\circ}\text{C}$ to $+85^{\circ}\text{C}$, $V_{DD1} = 3.0\text{V}$ to 3.6V ,

$$DV_{SS} = AV_{SS} = LRV_{SS} = XV_{SS1} = XV_{SS2} = VV_{SS1} = VV_{SS2} = 0\text{V}$$

Parameter	Symbol	Pin names	Conditions	min	typ	max	unit	
High-level input voltage	V_{IH} (USB)	UDM, UDP		2.0			V	
Low-level input voltage	V_{IL} (USB)					0.8		
Input leakage current	ILI		Output driver: OFF	-10.0		10.0	μA	
Differential input sensitivity	VDI		$ (UDP) - (UDM) $	0.2			V	
Common mode voltage range	VCM		Includes VDI range	0.8		2.5	V	
High-level output voltage	V_{OH} (USB)		Connect $15\text{k}\Omega \pm 5\%$ pull-down resistor to GND (0V).	2.8		3.6	V	
Low-level output voltage	V_{OL} (USB)		Connect $1.5\text{k}\Omega \pm 5\%$ pull-up resistor to V_{DD1} .	0		0.3	V	
Crossover voltage	VCR			1.3		2.0	V	
USB data rising time	TUR		CL = 50pF		4.0		20.0	ns
USB data falling time	TUF				4.0		20.0	

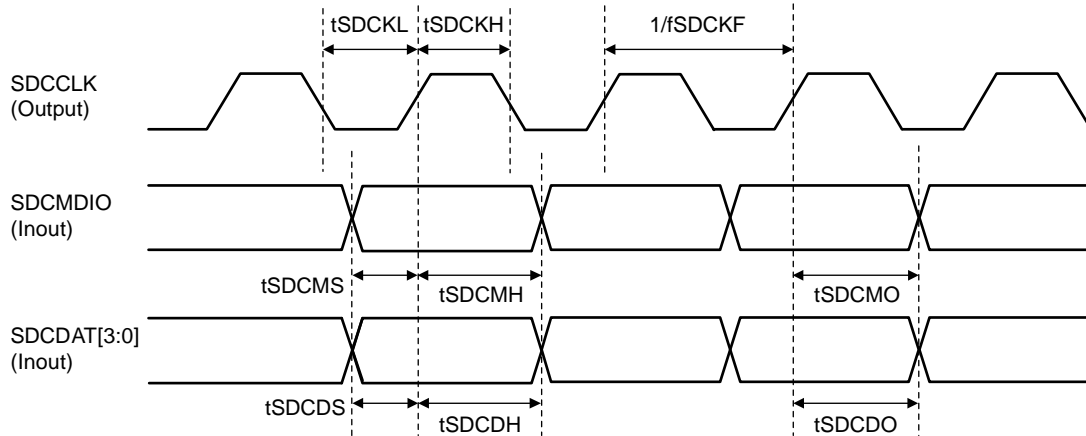

Example circuit for USB application

* The value of resistors and capacitors in this circuit might be needed to be adjusted for each application.

SD Memory Card Interface

SD Memory Card Input/Output Timing specification

* Relationship between signal name and pin name

SDCCLK : GP34 SDCMDIO : GP35 SDCDAT [3] : GP36
 SDCDAT [2] : GP37 SDCDAT [1] : GP32 SDCDAT [0] : GP33

Parameter	Symbol	Pin names	min	typ	max	unit
SDCCLK clock frequency	fSDCKF	SDCCLK		6.0		MHz
SDCCLK clock "H" level width	tSDCKH	SDCCLK		83.3		ns
SDCCLK clock "L" level width	tSDCKL	SDCCLK		83.3		ns
Setup time for command input	tSDCMS	SDCMDIO, SDCCLK	30.0			ns
Hold time for command input	tSDCMH	SDCMDIO, SDCCLK	30.0			ns
Command output valid time	tSDCMO	SDCMDIO, SDCCLK			30.0	ns
Setup time for data input	tSDCDS	SDCDAT [3:0], SDCCLK	30.0			ns
Hold time for data input	tSDCDH	SDCDAT [3:0], SDCCLK	30.0			ns
Data output valid time	tSDCDO	SDCDAT [3:0], SDCCLK			30.0	ns

Note: Internal CPU (ARM7) must be set to normal mode. Never use the SD Memory Card interface at the internal CPU's Low speed mode.

LC786960E

Internal Voltage Regulator at $T_a = -40^\circ\text{C}$ to $+85^\circ\text{C}$,

$$DV_{SS} = AV_{SS} = LRV_{SS} = XV_{SS1} = XV_{SS2} = VV_{SS1} = VV_{SS2} = 0V$$

Parameter	Symbol	Condition	min	typ	max	unit
Output voltage	DV _{DD15}	V _{DD1} = 3.0V to 3.6V	1.35	1.50	1.65	V
Load current	lo _{pe}	V _{DD1} = 3.3V			200	mA

Note : The spec. of "load current" above is sum of the load current of two internal voltage regulator.

Example circuit for Regulator

* Same circuit need to be mounted both for two regulator pins.
(No.42 and No.90)

* The capacitor C1 must be greater than 50µF and low Secure 50µF or more for low ESR and the capacity value in the range of the operating temperature so that there is a possibility of the oscillation when the capacity value changes by the temperature change etc.

(The recommended value is 100µF.)

A/D, D/A converter Characteristics for servo

at $T_a = -40^\circ\text{C}$ to $+85^\circ\text{C}$, V_{DD1} = 3.3V, DV_{SS} = AV_{SS} = LRV_{SS} = XV_{SS1} = XV_{SS2} = VV_{SS1} = VV_{SS2} = 0V

Parameter	Symbol	Condition	min	typ	max	unit
Resolution	Res			8		bit
Maximum input/output range	Vaio1			4/5 × V _{DD1}		V
Minimum input/output range	Vaio2			1/5 × V _{DD1}		V

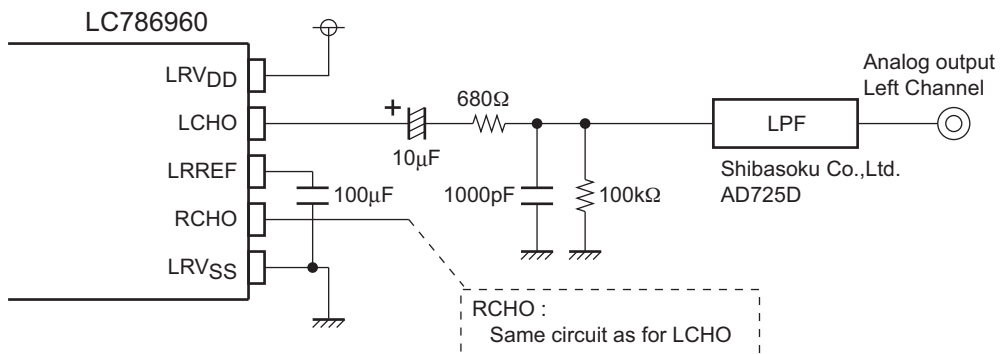

1-Bit D/A converter Characteristics

at $T_a = 25^\circ\text{C}$, V_{DD1} = 3.3V, DV_{SS} = AV_{SS} = LRV_{SS} = XV_{SS1} = XV_{SS2} = VV_{SS1} = VV_{SS2} = 0V

Parameter	Symbol	Pin names	Conditions	min	typ	max	unit
Output level	LEVEL	LCHO, RCHO	With a 1kHz, 0dB data signal		0.63		V _{rms}
Total harmonics distortion	THD+N	LCHO, RCHO	With a 1kHz, 0dB data signal, Using the 20kHz Low-pass filter (built-in AD725D)		0.008	0.012	%
Dynamic range	DR	LCHO, RCHO	With a 1kHz, -60dB data signal, Using the 20kHz Low-pass filter and A-filter (built-in AD725D)	92	96		dB
Signal to noise ratio	S/N	LCHO, RCHO	With a 1kHz, 0dB data signal, Using the 20kHz Low-pass filter and A-filter (built-in AD725D)	95	98		dB
Cross talk	CT	LCHO, RCHO	With a 1kHz, 0dB data signal, Using the 20kHz Low-pass filter (built-in AD725D)	82	85		dB

Note : Measured in normal speed playback mode in SANYO's 1-bit D/A converter block reference circuit.

1-Bit D/A converter output reference circuit

Oscillator

Example circuit for Oscillator

(1) XIN/XOUT: 12.0000MHz

- For System Main clock, USB control
- Recommended Oscillator

Nihon Dempa Kogyo Co., Ltd.

Type	Recommended value
NX5032GA	Rd1 = 0Ω, C1 = 4pF
NX8045GB	Rd1 = 0Ω, C1 = 4pF

(2) X16IN/X16OUT: 16.9344MHz

- For CD control, Audio control
- Recommended Oscillator

Murata Manufacturing Co., Ltd.

Type	Recommended value
CSTCE16M9V53-R0	Rd2 = 0Ω, C2 = open
CSTCW16M9X51008-R0	Rd2 = 0Ω, C2 = open
CSTLS16M9X53-B0	Rd2 = 0Ω, C2 = open

Nihon Dempa Kogyo Co., Ltd.

Type	Recommended value
AT51-CD2	Rd2 = 0Ω, C2 = 8pF

<Notes>

- Because the characteristics of oscillator could be changed according to the circuit board, ask evaluation with the individual original circuit board to the oscillator maker.
- The accuracy of 12MHz oscillator (XIN/XOUT) must be in ± 500 ppm when this oscillator clock is used for USB Host function.
- Concerning about internal circuit for XIN/XOUT and X16IN/X16OUT, refer to the “Analog Pin Internal Equivalent Circuits” section.

Sample Application Circuit

* This sample circuit is only for CD servo block, each PLL block and USB block.
 The value of each component needs to be adjusted under the target conditions.
 The circuit for CD servo shown above could be changed depending on the CD mechanism used.

Concerning to the application circuit for Regulator, Audio DAC and Oscillator, refer to the page 17 and 18 respectively.

- SANYO Semiconductor Co.,Ltd. assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein.
- Regarding monolithic semiconductors, if you should intend to use this IC continuously under high temperature, high current, high voltage, or drastic temperature change, even if it is used within the range of absolute maximum ratings or operating conditions, there is a possibility of decrease reliability. Please contact us for a confirmation.
- SANYO Semiconductor Co.,Ltd. strives to supply high-quality high-reliability products, however, any and all semiconductor products fail or malfunction with some probability. It is possible that these probabilistic failures or malfunction could give rise to accidents or events that could endanger human lives, trouble that could give rise to smoke or fire, or accidents that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO Semiconductor Co.,Ltd. products described or contained herein are controlled under any of applicable local export control laws and regulations, such products may require the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written consent of SANYO Semiconductor Co.,Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO Semiconductor Co.,Ltd. product that you intend to use.
- Upon using the technical information or products described herein, neither warranty nor license shall be granted with regard to intellectual property rights or any other rights of SANYO Semiconductor Co.,Ltd. or any third party. SANYO Semiconductor Co.,Ltd. shall not be liable for any claim or suits with regard to a third party's intellectual property rights which has resulted from the use of the technical information and products mentioned above.

This catalog provides information as of August, 2012. Specifications and information herein are subject to change without notice.
