### 1. General Description

The LD550DUN is a Color Active Matrix Liquid Crystal Display with an integral Light Emitting Diode (LED) Local Block backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive display type which is operating in the normally black mode. It has a 54.64 inch diagonally measured active display area with WUXGA resolution (1080 vertical by 1920 horizontal pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arrayed in vertical stripes. Gray scale or the luminance of the sub-pixel color is determined with a 10-bit gray scale signal for each dot. Therefore, it can present a palette of more than 1.07Bilion colors.

It has been designed to apply the 10-bit 2-port LVDS interface.

It is intended to support Public Display where high brightness, super wide viewing angle, high color gamut, high color depth and fast response time are important.

#### General Features

Active Screen Size	54.64 inches(1387.80mm) diagonal				
Outline Dimension	1213.4(H) x 684.2(V) x 39.2(B) (Typ.) 55.1mm(4 Mount) [mm]				
Pixel Pitch	0.630(H) X 0.630(V)				
Pixel Format	1920 horiz. by 1080 vert. Pixels, RGB stripe arrangement				
Display Mode	IPS				
Color Depth	10Bit (D), 1.07 Billion colors				
Luminance, White	500 cd/m2 (Center 1point ,Typ.)				
Viewing Angle (CR>10)	Viewing angle free ( R/L 178 (Min.), U/D 178 (Min.))				
Power Consumption	Total 168.8W (Typ.) [Logic=7.5W, Backlight=161.3W (@EXTVBR-B = 100%)				
Weight	16.2 kg (Typ.), 17.0 kg (Max.)				
Display Mode	Transmissive mode, Normally black				
Surface Treatment	Hard coating(2H), Anti-glare low reflection treatment of the front polarizer (Haze 3%(Typ.))				
Possible Display Type	Landscape and Portrait Enabled				

Ver. 0.0 4 / 30

### 2. Absolute Maximum Ratings

The following items are maximum values which, if exceeded, may cause faulty operation or damage t o t h e LCD module.

Table 1. ABSOLUTE MAXIMUM RATINGS

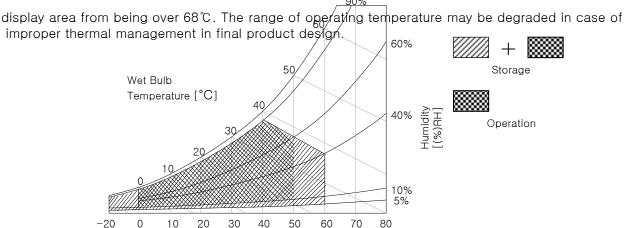

Parameter		Symbol	Symbol		Unit	Note	
		Syllibol	Min	Max	Offic	Note	
Dower Input Voltage	LCD Circuit	VLCD	-0.3	+14.0	VDC		
Power Input Voltage	Driver	VBL	-0.3	+ 27.0	VDC		
	ON/OFF	VON/OFF	-0.3	+3.9	VDC	1	
Driver Control Voltage	Brightness	EXTVBR-B	-0.3	+3.9	VDC	ı	
	Status	Status	-0.3	+3.9	VDC		
T-Con Option Selection Voltage		VLOGIC	-0.3	+4.0	VDC		
Operating Temperature		Тор	0	+50	°C	2	
Storage Temperature		Тѕт	-20	+60	°C	2	
Panel Front Temperature		Tsur	_	+68	°C	3	
Operating Ambient Humidity		Нор	10	90	%RH	0	
Storage Humidity		Нѕт	5	90	%RH	2	

#### Note.

of

- 1. Ambient temperature condition (Ta =  $25 \pm 2$  °C)
- 2. Temperature and relative humidity range are shown in the figure below. Wet bulb temperature should be Max 39°C, and no condensation of water.
- 3. Gravity mura can be guaranteed below 40°C condition.
- 4. The maximum operating temperatures is based on the test condition that the surface temperature of display area is less than or equal to 68°C with LCD module alone in a temperature controlled chamber.

Thermal management should be considered in final product design to prevent the surface temperature \_\_90%\_\_\_

Ver. 0.0 5 / 30

Dry Bulb Temperature [°C]

### 3. Electrical Specifications

#### 3-1. Electrical Characteristics

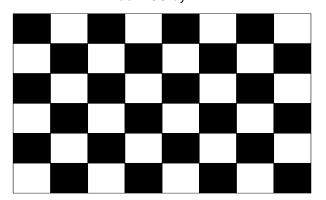

It requires two power inputs. One is employed to power for the LCD circuit. The other is used for the LED backlight and LED Driver circuit.

Table 2. ELECTRICAL CHARACTERISTICS

Parameter		Symbol		Value	Unit	Note	
Falai	Parameter			Тур	Max		Onit
Circuit :		-		-		-	
Power Input Voltage	•	VLCD	10.8	12.0	13.2	VDC	
	Power Input Current		-	620	810	mA	1
Power Input Current			595	850	1105	mA	2
T-CON Option	Input High Voltage	V <sub>IH</sub>	2.7	-	3.6	VDC	
Selection Voltage	Input Low Voltage	V <sub>IL</sub>	0	-	0.7	VDC	
Power Consumption		Dian	-	7.5	9.8	Watt	1
		PLCD	-	10.2	13.3	Watt	2
Rush current		Irush	-	-	6	А	3

- Notes: 1. The specified current and power consumption are under the  $V_{LCD}$ =12.0V, 25  $\pm$  2°C,  $f_V$ =60Hz condition whereas mosaic pattern(8 x 6) is displayed and  $f_V$  is the frame frequency.
  - 2. The current is specified at maximum current pattern.
  - 3. The duration of rush current is about 2ms and rising time of power input is 0.5ms (min.).
  - 4. Ripple voltage level is recommended under  $\pm 5\%$  of typical voltage

White: 1023Gray Black: 0Gray

White: 1023Gray

Mosaic Pattern(8 x 6)

Max Current Pattern

Table 3. ELECTRICAL CHARACTERISTICS (Continue)

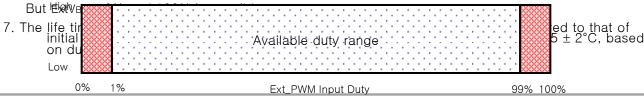

Normal temperature [25 ±2℃]

Parameter		Currele el		Values		Llmik	Notes	
		Symbol	Min	Тур	Max	Unit		
LED Driver:								
Power Supply Inp	ut Voltage		VBL	21.6	24.0	26.4	Vdc	1
Power Supply Inp	ut Current		IBL	-	6.72	7.15	А	Ext VBR-B = 100%
Power Supply Input Current (In-Rush)		In-rush	_	-	10.7	А	VBL = 21.6V Ext VBR-B = 100% 4	
Power Consumption		PBL	_	161.3	171.7	W	1 Ext VBR-B = 100%	
	On/Off	On	V on	2.5	_	3.6	Vdc	
	On/On	Off	V off	-0.3	0.0	0.7	Vdc	
Brightness A		Adjust	ExtVBR-B	1	_	100	%	On Duty, 6
Control System	PWM Frequ	lency for	PAL		100		Hz	3
Signals	PWM Frequency for NTSC & PAL		NTSC		120		Hz	3
	,	Pulse Duty Level		2.5	-	3.6	Vdc	HIGH: on duty
	(PWM)		Low Level	0.0	-	0.7	Vdc	LOW: off duty
Life Time				50,000	60,000		Hrs	7

#### Notes:

- Electrical characteristics are determined after the unit has been 'ON' and stable for approximately 60 minutes at 25±2°C. The specified current and power consumption are under the typical supply Input Voltage
   24Vand VBR (ExtVBR-B: 100%), it is total power consumption.
- 2. The life time (MTTF) is determined as the time which luminance of the LED is 50% compared to that of initial value at the typical LED current (ExtVBR-B:100%) on condition of continuous operating in LCM state at 25±2°C.
- 3. LGD recommend that the PWM freq. is synchronized with Two times harmonic of V\_sync signal of system.
  - Though PWM frequency is over 120Hz (max 252Hz), function of LED Driver is not affected.
- 4. The duration of rush current is about 200ms. This duration is applied to LED on time.
- 5. Even though inrush current is over the specified value, there is no problem if  $I^2T$  spec of fuse is satisfied.
- 6. Ext\_PWM Signal have to input available duty range.

  Between 99% and 100% ExtVBR-B duty have to be avoided. (99% < ExtVBR-B < 100%)

Ver. 0.0 7 / 30

#### 3-2. Interface Connections

This LCD module employs two kinds of interface connection, a 51-pin connector is used for the module electronics and Master 14-pin connectors are used for the integral backlight system.

#### 3-2-1. LCD Module

- LCD Connector(CN1): FI-RXE51S-HFS (manufactured by JAE)

- Mating Connector: FI-RE51HL

#### Table 4. MODULE CONNECTOR(CN1) PIN CONFIGURATION

No	Symbol	Description	No	Symbol	Description
1	NC	No Connection (Reserved for LGD)	27	Bit Select	'H' or NC = 10bit(D), 'L' = 8bit
2	NC	No Connection	28	R2AN	SECOND LVDS Receiver Signal (A-)
3	NC	No Connection	29	R2AP	SECOND LVDS Receiver Signal (A+)
4	NC	No Connection (Reserved for LGD)	30	R2BN	SECOND LVDS Receiver Signal (B-)
5	NC	No Connection (Reserved for LGD)	31	R2BP	SECOND LVDS Receiver Signal (B+)

20	R1CLKP	FIRST LVDS Receiver Clock Signal(+)	46	GND	Ground
21	GND	Ground	47	NC	No connection
22	R1DN	FIRST LVDS Receiver Signal (D-)	48	VLCD	Power Supply +12.0V
23	R1DP	FIRST LVDS Receiver Signal (D+)	49	VLCD	Power Supply +12.0V
24	R1EN	FIRST LVDS Receiver Signal (E-)	50	VLCD	Power Supply +12.0V
25	R1EP	FIRST LVDS Receiver Signal (E+)	51	VLCD	Power Supply +12.0V
26	GND	Ground	-	-	-

#### Notes:

- 1. All GND(ground) pins should be connected together to the LCD module's metal frame.
- 2. All VLCD (power input) pins should be connected together.
- 3. All Input levels of LVDS signals are based on the EIA 644 Standard.
- 4. #2~#6 NC (No Connection): These pins are used only for LGD (Do not connect)
- 5. Specific pin No. #44 is used for "No signal detection" of system signal interface. It should be GND for NSB(No Signal Black) during the system interface signal is not. If this pin is "H" or "NC", LCD Module displays AGP(Auto Generation Pattern).
- 6.Specially added pins #8 & #9, for LED Driver Defect Detecting (Appendix V, VI, VII)

Ver. 0.0 8 / 30

#### 3-2-2. Backlight Module

Master

-LED Driver Connector

: 20022WR - H14B2(Yeonho) or Compatible

- Mating Connector

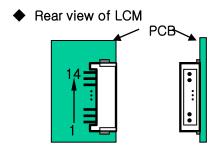

: 20022HS - 14B2 (Yeonho) or Compatible

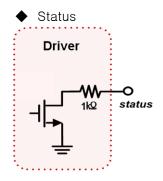

Table 5-1. LED DRIVER CONNECTOR PIN CONFIGULATION

Pin No	Symbol	Description	14PIN	Note
1	VBL	Power Supply +24.0V	VBL	
2	VBL	Power Supply +24.0V	VBL	
3	VBL	Power Supply +24.0V	VBL	
4	VBL	Power Supply +24.0V	VBL	
5	VBL	Power Supply +24.0V	VBL	
6	GND	Backlight Ground	GND	
7	GND	Backlight Ground	GND	
8	GND	Backlight Ground	GND	1

12	VON/OFF	Backlight ON/OFF control	VON/OFF	4
13	EXTVBR-B	External PWM	EXTVBR-B	3
14	GND	Backlight Ground	GND	

Notes: 1. GND should be connected to the LCD module's metal frame.

- 2. Normal: Low (under 0.7V) / Abnormal: Open
- 3. High: on duty / Low: off duty, Pin#13 can be opened. (if Pin #1 is open, EXTVBR-B is 100%
- 4. Each impedance of pin #12 and #13 is over 50 [K $\Omega$ ].

Ver. 0.0 9 / 30

#### 3-2-3. Local Dimming Interface

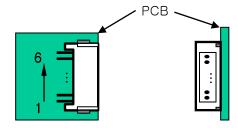

-- Local Dimming Interface Connector: 10003HR-H06L(YEONHO Elec.) or Equivalent

Table 5-2. LOCAL DIMMING INTERFACE CONNECTOR PIN CONFIGULATION

Pin No	Symbol	Description	Note
1	DCLK	Local Dimming Serial Clock	
2	DIN	Local Dimming Serial Data	
3	GND	Backlight Ground	1
4	VSYNC	Vertical Sync signal	
5	N.C	No connection	
6	N.C	No connection	

Notes: 1. GND should be connected to the LCD module's metal frame.

#### 3-3. Signal Timing Specifications

Table 6 shows the signal timing required at the input of the LVDS transmitter. All of the interface signal timings should be satisfied with the following specification for normal operation.

Table 6. TIMING TABLE for NTSC & PAL (DE Only Mode)

ITE	М	Symbol	Min	Тур	Max	Unit	notes
	Display Period	thv	960	960	960	tCLK	1920 / 2
Horizontal	Blank	tнв	100	140	240	tCLK	1
	Total	tHP	1060	1100	1200	tCLK	
	Display Period	tvv	1080	1080	1080	Lines	
Vertical	Blank	tvB	20	45	300	Lines	1
	Total	tvp	1100	1125	1380	Lines	

ITE	М	Symbol	Min	Тур	Max	Unit	notes
	DCLK	fcLK	60.00	74.25	78.00	MHz	
Frequency	Horizontal	fн	57.3	67.5	70	KHz	2
	Vertical	fv	47	60	63	Hz	2

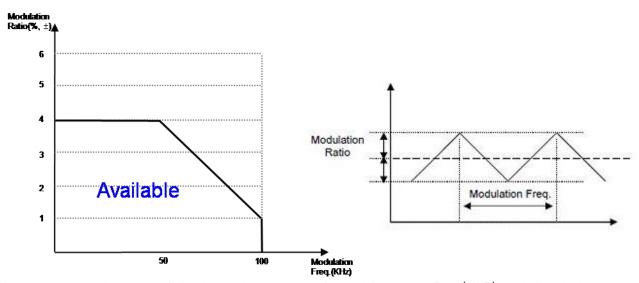

notes: 1. The input of HSYNC & VSYNC signal does not have an effect on normal operation (DE Only Mode).

If you use spread spectrum of EMI, add some additional clock to minimum value for clock margin.

- 2. The performance of the electro-optical characteristics may be influenced by variance of the vertical refresh rate and the horizontal frequency
- 3. Spread Spectrum Rate (SSR) for 50KHz ~ 100kHz Modulation Frequency(FMOD) is calculated by (7 0.06\*Fmod), where Modulation Frequency (FMOD) unit is KHz. LVDS Receiver Spread spectrum Clock is defined as below figure
  - \* Timing should be set based on clock frequency.

Ver. 0.0 11 / 30

\* Please pay attention to the followings when you set Spread Spectrum Rate(SSR) and Modulation Frequency(FMOD)

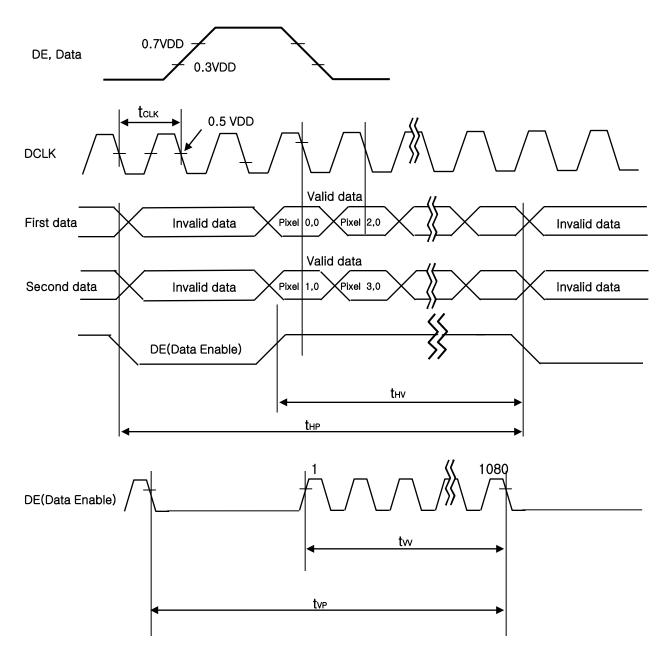

- 1. Please set proper Spread Spectrum Rate(SSR) and Modulation Frequency (FMOD) of TV system LVDS output.
- 2. Please check FOS after you set Spread Spectrum Rate(SSR) and Modulation Frequency(FMOD) to avoid abnormal display. Especially, harmonic noise can appear when you use Spread Spectrum under FMOD 30 KHz.

Ver. 0.0 12 / 30

## 3-4. LVDS Signal Specification

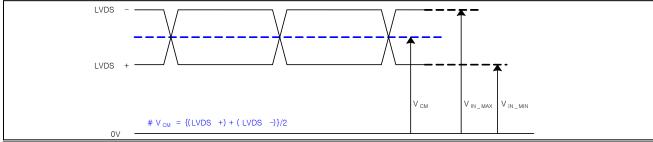

## 3-4-1. LVDS Input Signal Timing Diagram

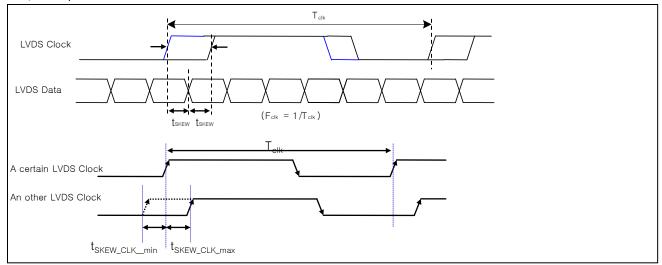

### 3-4-2. LVDS Input Signal Characteristics

## 1) DC Specification

Description	Symbo I	Min	Max	Unit	Note
LVDS Common mode Voltage	V <sub>CM</sub>	1.0	1.5	V	-
LVDS Input Voltage Range	V <sub>IN</sub>	0.7	1.8	V	-
Change in common mode Voltage	ΔVCM		250	mV	-

2) AC Specification

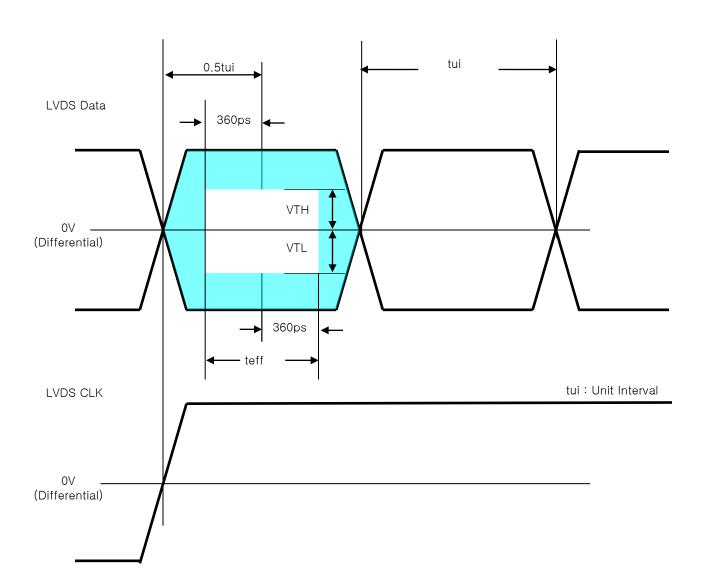

Description	Symbol	Min	Max	Unit	notes
	$V_{TH}$	100	600	mV	Tested with Differential
LVDS Differential Voltage	V <sub>TL</sub>	-600	-100	mV	Probe 2
LVDS Clock to Data Skew	t <sub>skew</sub>	-	(0.25*T <sub>clk</sub> )/ 7	ps	-
Effective time of LVDS	t <sub>eff</sub>	±360	ı	ps	_
LVDS Clock to Clock Skew (Each other)	t <sub>SKEW_CLK</sub>	-	1/7* T <sub>clk</sub>	ps	-

notes 1. All Input levels of LVDS signals are based on the EIA 644 Standard.

2. LVDS Differential Voltage is defined within  $t_{\text{eff}}$ 

\* This accumulated waveform is tested with differential probe

#### 3-5. Color Data Reference

The brightness of each primary color(red,green,blue) is based on the 10-bit gray scale data input for the color. The higher binary input, the brighter the color. Table 8 provides a reference for color versus data input.

Table 7. COLOR DATA REFERENCE

#### 3-6. Power Sequence

#### 3-6-1. LCD Driving circuit

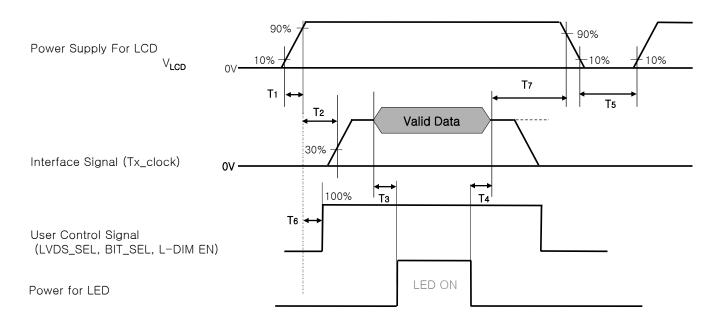

Table 8. POWER SEQUENCE

Danamatan		11-24			
Parameter	Min	Тур	Max	Unit	notes
T1	0.5	-	20	ms	1
T2	0	-	400	ms	2
Т3	400	-	-	ms	3
T4	100	_	_	ms	3
T5	3.0	-	-	S	4
T6	0	-	T2	ms	5
T7	0	_	_	ms	7

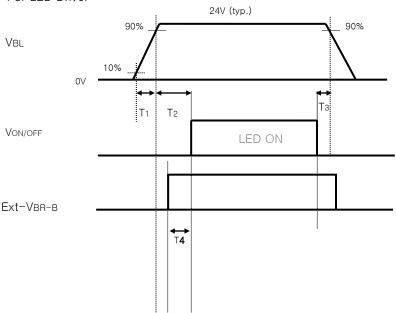

notes

- 1. Even though T1 is over the specified value, there is no problem if I2T spec of fuse is satisfied.
- 2. If T2 is satisfied with specification after removing LVDS Cable, there is no problem.
- 3. The T3 / T4 is recommended value, the case when failed to meet a minimum specification, abnormal display would be shown. There is no reliability problem.
- 4. T5 should be measured after the Module has been fully discharged between power off and on period.
- 5. If the on time of signals (Interface signal and user control signals) precedes the on time of Power (V<sub>LCD</sub>), it will be happened abnormal display. When T6 is NC status, T6 doesn't need to be measured.
- 7. It is recommendation specification that T8 has to be 100ms as a minimum value.
- \* Please avoid floating state of interface signal at invalid period.
- When the power supply for LCD (VLCD) is off, be sure to pull down the valid and invalid data to 0V.

#### 3-6-2. Sequence for LED Driver

Power Supply For LED Driver

#### 3-6-3. Dip condition for LED Driver

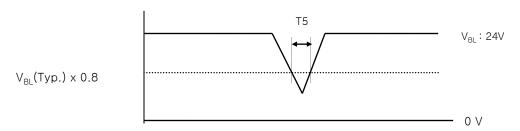

Table 9. Power Sequence for LED Driver

Daramatar		Values		Lleita	Remarks
Parameter	Min	Тур	Max	Units	Hemarks
T1	20	-	-	ms	1
T2	500	_	-	ms	
Т3	10	_	-	ms	
T4	0	_	-	ms	
T5	_	_	10	ms	V <sub>BL</sub> (Тур) x 0.8

notes: 1. T1 describes rising time of 0V to 24V and this parameter does not applied at restarting time.

Even though T1 is over the specified value, there is no problem if I2T spec of fuse is satisfied.

## 4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable in a dark environment at  $25\pm2^{\circ}$ C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of  $\Phi$  and  $\theta$  equal to 0 °.

FIG. 1 shows additional information concerning the measurement equipment and method.

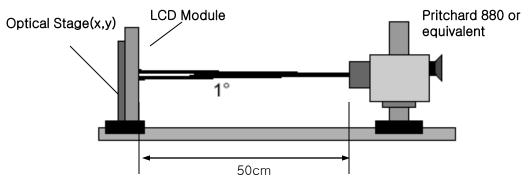

FIG. 1 Optical Characteristic Measurement Equipment and Method

Table 10. OPTICAL CHARACTERISTICS

Ta= 25±2°C, V<sub>LCD</sub>=12.0V, fv=60Hz, DcIk=74.25MHz, ExtVBR-B=100%

		Wx	Тур	0.279	Тур		
	WHITE	Wy	- 0.020	0.292	+0.020		
Color Temperature				10,000		K	
Color Gamut				72		%	
Viewing Angle (CR>	10)						
x axis,	right(φ=0°)	θr	89	ı	_		
x axis,	left (φ=180°)	θΙ	89	ı	_		
y axis,	up (φ=90°)	θu	89	-	_	degree	5
y axis, (φ=270°		θd	89	-	-		
Gray Scale			_	-	_		6

Notes:1. Contrast Ratio(CR) is defined mathematically as:

CR(Contrast Ratio) = Maximum CRn (n=1, 2, 3, 4, 5)

CRn = Surface Luminance at position n with all white pixels

Surface Luminance at position n with all black pixels

n = the Position number(1, 2, 3, 4, 5). For more information, see FIG 2-1.

2.Optical Characteristics is determined after the unit has been 'ON' and 1 Hour after lighting the backlight in a dark environment at 25±2°C. Surface luminance is the luminance value at center

1-point across the LCD surface 50cm from the surface with all pixels displaying white. For more information see the FIG. 1.

3. δ WHITE(9P) = Minimum(Lon1,Lon2,···, Lon8,Lon9) /
Maximum(Lon1,Lon2,···,Lon8,Lon9)\*100(%)
Where Lon1 to Lon9 are the luminance with all pixels displaying white at 9 locations.
For more information, see the FIG. 2-2.

4. Response time is the time required for the display to transition from G(N) to G(M) (Rise Time,  $Tr_{\rm R}$ )

and from G(M) to G(N) (Decay Time,  $Tr_D$ ). For additional information see the FIG. 3. (N<M) \* G to G Spec is average of measured time (N, M = 0 (Black)  $\sim$  1023(White), 128 gray step).

5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis h i c h is normal to the LCD module surface. For more information, see the FIG. 4.

Month	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Spe	Oct	Nov	Dec
Mark	1	2	3	4	5	6	7	8	9	Α	В	С

b) Location of Lot Mark

Serial No. is printed on the label. The label is attached to the backside of the LCD module. This is subject to change without prior notice.

## 8-2. Packing Form

a) Package quantity in one box: 10 pcs

b) Pallet Assy Size: 1440mm(W) X 1140mm(D) X 950mm(H)

Ver. 0.0 28 / 30

#### 9. Precautions

Please pay attention to the followings when you use this TFT LCD module.

### 9-1. Mounting Precautions

- (1) You must mount a module using specified mounting holes (Details refer to the drawings).
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress, Concentrated stress)

is not applied to the module. And the case on which a module is mounted should have sufficient strength

so that external force is not transmitted directly to the module.

(3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer.

Transparent protective plate should have sufficient strength in order to the resist external force.

- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former

generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break

by electro-chemical reaction.

(6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.

Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental

to the polarizer.)

(7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like

chamois soaks with petroleum benzine. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.

- 982W Operating Precautions as soon as possible. Their long time contact with polarizer causes
- (1) പ്രിക്രി പ്രാവര്യ പ്രവര്ശിലുന്നു പ്രവര്ശിലുന്ന
- (9) <del>Po\_patoppy Other case preduse inside</del> Eigevits do not have sufficient strength.
- (129) Flowboting three-lead priveromight comperature entrinower (kraper damage ted of the priveromight comperature entrinower (kraper damage ted of the priveromight comperature).
- (영화 Brightness depends on the temperature. (In lower temperature, it becomes lower.)

Antishatieweplewheratanedinesthons for the quired time that brightness is stable after turned on) becomes longer

- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to o l a r i z e r o r electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference s h a l l b e done by system manufacturers. Grounding and shielding methods may be important to minimized t h e interference.
- (7) Please do not give any mechanical and/or acoustical impact to LCM. Otherwise, LCM can't be o p e r a t e d its full characteristics perfectly.
  - (8) A screw which is fastened up the steels should be a machine screw. (if not, it can causes conductive particles and deal LCM a fatal blow)
  - (9) Please do not set LCD on its edge.

(109 The conductive material and signal cables are kept away from LED driver inductor to prevent

abnormal

<del>9,</del> 7,6,Eleq	itr <b>ost</b> ati	င့်ပ	ischarge (	<b>Control</b> ic	c circuits	s, it is	not stro	ong to	electrosta	tic discha	arge.	Make

treatment	persons	are	connected t	to ground	through	wrist ba	and etc.	And d	lon't touch	interface	pin	
directly.												

### 9-4. Precautions for Strong Light Exposure

Strong light exposure causes degradation of polarizer and color filter.

#### 9-5. Storage

When storing modules as spares for a long time, the following precautions are necessary.

(1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature

between 5°C and 35°C at normal humidity.

- (2) The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.
- (3) Storage condition is guaranteed under packing conditions.
- (4) The phase transition of Liquid Crystal in the condition of the low or high storage temperature will be recovered when the LCD module returns to the normal condition.

### 9-6. Handling Precautions for Protection Film

- (1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well
- blown equipment or in such a condition, etc. (2) When the module with protection film attached is stored for a long time, sometimes there remains a small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is 0 n Ζ
- 9-70.14 peropriate Condition for Perblication by the chamois soaked with o r m a Generally large-sized LCD modules are designed for consumer applications (TV).

Accordingly, a long-term display like in Commercial Display application, can cause uneven display includir image sticking. To optimize module's lifetime and function, several operating usages are required.

- 1. Normal operating condition
  - Temperature: 0 ~ 40°C
  - Operating Ambient Humidity: 10 ~ 90 %
  - Display pattern: dynamic pattern (Real display)

Note) Long-term static display can cause image sticking.

- 2. Operating usages under abnormal condition
  - a. Ambient condition
    - Well-ventilated place is recommended to set up Commercial Display system.
  - b. Power and screen save
    - Periodical power-off or screen save is needed after long-term display.

30 / 30 Ver. 0.0

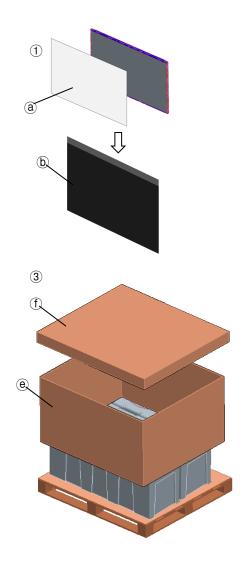

- 3. Operating usages to protect against image sticking due to long-term static display
  - a. Suitable operating time: under 24 hours a day.
    - (\* The moving picture can be allowed for 24 hours a day)
  - b. Static information display recommended to use with moving image.
    - Cycling display between 5 minutes' information(static) display and 10 seconds' moving image.
  - c. Background and character (image) color change
    - Use different colors for background and character, respectively.
    - Change colors themselves periodically.
  - d. Avoid combination of background and character with large different luminance.
    - 1) Abnormal condition just means conditions except normal condition.
    - 2) Black image or moving image is strongly recommended as a screen save.
- 4. Lifetime in this spec. is guaranteed only when Commercial Display is used according to operating usages
- 5. Module should be turned clockwise based on front view when used in portrait mode.
