

VFM STEP-UP DC/DC CONVERTER

REV: 01

General Description

The LD7282A is a VFM step-up DC/DC converter with ultra low supply current. The CMOS design results in less power consumption and high capability for battery-powered instruments.

With a built-in switching MOSFET, the LD7280 takes only three external components (using a coil, diode & capacitor connected externally) to achieve the low ripple & high efficiency.

As well, using chip enable function will make it possible to supply current on standby minimized. This converter also features a very low switch off, bias current of 5.0 μ A typical.

Features

- Minimum external component counts
- Ultra low input current in switch off (Typ. 5 μ A)
- $\pm 2\%$ High accuracy of output voltage
- Low ripple and low noise
- Low start-up voltage, 0.75V at no load.
- 85% efficiency with low cost inductor

Applications

- Power source for battery -powered equipment
- Power source for DSC, PDA, Camcorders, VCRs, Pagers, and Hand-held communication equipment

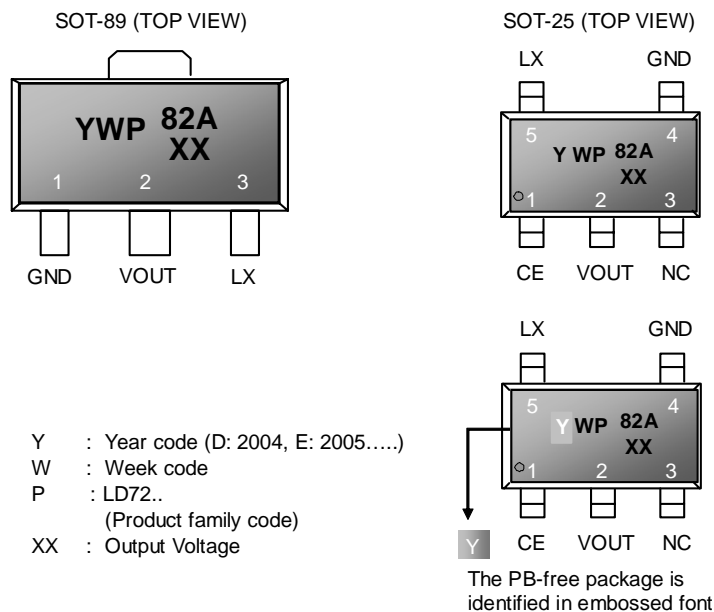

Typical Application

L range: 10 μ H~120 μ H
