

The LGE433A is a true one- port , surface- acoustic- wave(SAW) resonator in a low- profile QCC4A case. It provides reliable , fundamental- mode , quartz frequency stabilization of fixed- frequency transmitters operating at 433.92 MHz.

1. Package Dimension (QCC4A)

Pin	Connection
1	Input / Output
3	Output / Input
2/4	Case Ground

Sign	Data(unit: mm)
A	1.2
B	0.8
C	0.5
D	1.4
E	5.0
F	3.5

2. Marking

LGE
R433A

Color: Black or Blue

3. Equivalent LC Model and Test Circuit

4. Typical Application Circuit

1) Typical Low-Power Transmitter Application

2) Typical Local Oscillator Application

5. Typical Frequency Response

6. Temperature Characteristics

The curve shown above accounts for resonator contribution only and does not include oscillator temperature characteristics.

7. Performance

7-1. Maximum Ratings

Rating		Value	Units
CW RF Power Dissipation	P	0	dBm
DC Voltage Between Terminals	V_{DC}	± 30	V
Storage Temperature Range	T_{stg}	-40 to +85	$^{\circ}C$
Operating Temperature Range	T_A	-40 to +85	$^{\circ}C$

7-2. Electronic Characteristics

Characteristic		Sym	Minimum	Typical	Maximum	Units
Center Frequency (+25 $^{\circ}C$)	Absolute Frequency	f_c	433.845		433.995	MHz
	Tolerance from 433.920 MHz	Δf_c		± 75		kHz
Insertion Loss		I_L		1.5	1.8	dB
Quality Factor	Unloaded Q	Q_U		11274		
	50 Ω Loaded Q	Q_L		1800		
Temperature Stability	Turnover Temperature	T_O	25	40	55	$^{\circ}C$
	Turnover Frequency	f_O		f_c		kHz
	Frequency Temperature Coefficient	FTC		0.037		ppm/ $^{\circ}C^2$
Frequency Aging Absolute Value during the First Year		$ f_A $		≤ 10		ppm/yr
DC Insulation Resistance Between Any Two Pins			1.0			M Ω
RF Equivalent RLC Model	Motional Resistance	R_M		19	23	Ω
	Motional Inductance	L_M		78.605		μH
	Motional Capacitance	C_M		1.7132		fF
	Pin 1 to Pin 2 Static Capacitance	C_O		1.9		pF

 **CAUTION: Electrostatic Sensitive Device. Observe precautions for handling!**

NOTES:

- The center frequency, f_c , is measured at the minimum IL point with the resonator in the 50 Ω test system.
- Unless noted otherwise, case temperature $T_C = +25^{\circ}C \pm 2^{\circ}C$.
- Frequency aging is the change in f_c with time and is specified at +65 $^{\circ}C$ or less. Aging may exceed the specification for prolonged temperatures above +65 $^{\circ}C$. Typically, aging is greatest the first year after manufacture, decreasing in subsequent years.
- Turnover temperature, T_O , is the temperature of maximum (or turnover) frequency, f_O . The nominal frequency at any case temperature, T_C , may be calculated from: $f = f_O [1 - FTC (T_O - T_C)^2]$.
- This equivalent RLC model approximates resonator performance near the resonant frequency and is provided for reference only. The capacitance C_O is the measured static (nonmotional) capacitance between the two terminals. The measurement includes case parasitic capacitance.
- Derived mathematically from one or more of the following directly measured parameters: f_c , I_L , 3 dB bandwidth, f_c versus T_C , and C_O .
- The specifications of this device are based on the test circuit shown above and subject to change or obsolescence without notice.
- Typically, equipment utilizing this device requires emissions testing and government approval, which is the responsibility of the equipment manufacturer.
- Our liability is only assumed for the Surface Acoustic Wave (SAW) component(s) per se, not for applications, processes and circuits implemented within components or assemblies.
- For questions on technology, prices and delivery please contact our sales offices or E-mail :
