Functional principle

The measuring principle of linear position sensors is based on RLC coupling between the positioning element and the sensor, whereby an output signal is provided proportional to the position of the positioning element. The rugged sensors are wear and tear-free, thanks to the contactless operating principle. They convince through their excellent repeatability, resolution and linearity within a broad temperature range. The innovative technology ensures a high immunity to electromagnetic DC and AC fields.

Mounting instructions / Description

Extensive mounting accessories provide various options for installation. The measuring principle of RLC coupling makes the sensor immune to magnetized metal splinters and other interference fields.

LED indications

green

positioning element is in the measuring range

yellow

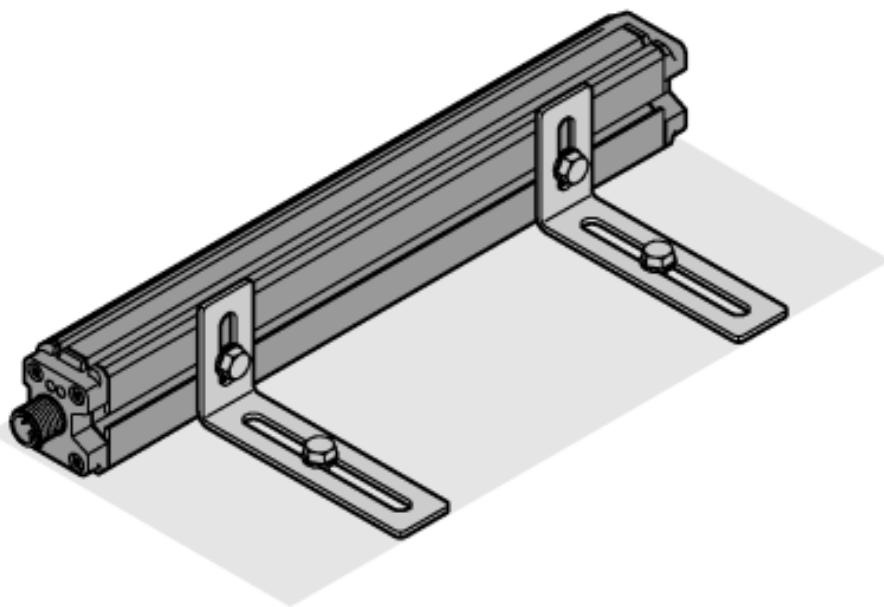

positioning element is in the measuring range, the distance is too large. This is indicated by a weaker signal, see status bit 22

yellow flashing

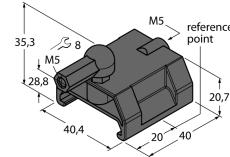

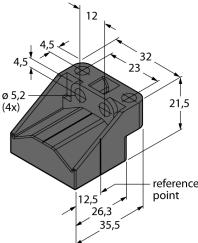

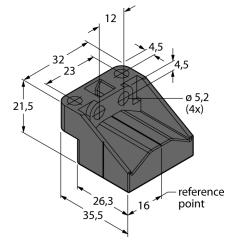

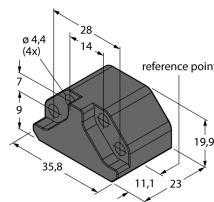

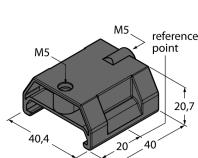

positioning element is outside the coverage, see status bit 23

off

positioning element is outside the programmed area (only with teachable versions)
