**Functional principle**

The measuring principle of linear position sensors is based on RLC coupling between the positioning element and the sensor, whereby an output signal is provided proportional to the position of the positioning element. The rugged sensors are wear and tear-free, thanks to the contactless operating principle. They convince through their excellent repeatability, resolution and linearity within a broad temperature range. The innovative technology ensures a high immunity to electromagnetic DC and AC fields.

## Mounting instructions / Description

Extensive mounting accessories provide various options for installation. The measuring principle of RLC coupling makes the sensor immune to magnetized metal splinters and other interference fields.

### LED indicates status:

**Green:**  
Sensor is supplied correctly

### LED indicates measuring range

**Green:**  
Positioning element is in the measuring range

**Yellow:**  
Positioning element is in the measuring range, signal low (e.g. distance too large)

**Yellow flashing:**  
Positioning element is outside the coverage

**LED OFF:**  
Positioning element is outside the programmed range (only with teachable versions)

### Teaching

The start and end point of the measuring range are set by pressing the button at the teach adapter. Moreover there is the possibility to invert the course of the output curve.

Bridge pin 5 and pin 1 for 10 s = factory setting

Bridge pin 5 and pin 3 for 10 s = factory setting inverted

Bridge pin 5 and pin 3 for 2 s = sets start value of measuring range

Bridge pin 5 and pin 1 for 2 s = sets end value of measuring range
