Inductive Proximity Sensor LJ12A3

Advantages:

1) Compact volume, Diversified exterior

2) High precision of repeated location3) Good performance of anti-interference

4) High on-off frequency, Wide voltage range

5) Dust proof, vibration proof, water proof and oil proof

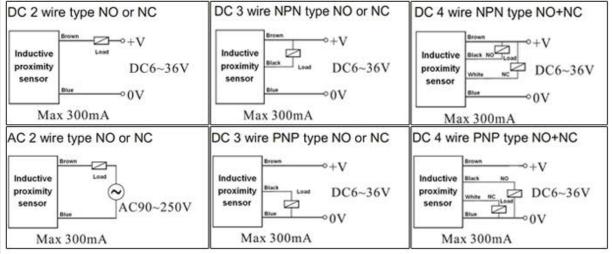

6) With short-circuit protection and inverted connecting protection

Specification:

		Dimension		
	Detection distance			
[DC 6	NPN	NO	LJ12A3-2-Z/BX / LM12-3002NA

	90	label silicon	NC	LJ12A3-4-J/DZ / LM12-2004B
	~250		NO+NC	
	V	Relay output		
Contr	Control output			200mA
		SCR/Relay		300mA

Output voltage drop DC/AC	DC<2V DC(Two wire system) <3.9V AC<10V		
Consumption current	DC<15mA AC<10mA		
Standard detected object	15×15×1(A3 iron)		
Repeated precision	0.01		
DC/AC Response frequency	400Hz/25Hz -25°C~75°C ≥50MΩ		
Working environment temperature			
Insulation resistance			
Shell material	Metal		
Protection grade	IEC standard IP67		
Altemative model at home and abroad	E2E-X5M□		

Series connection and parallel connection:

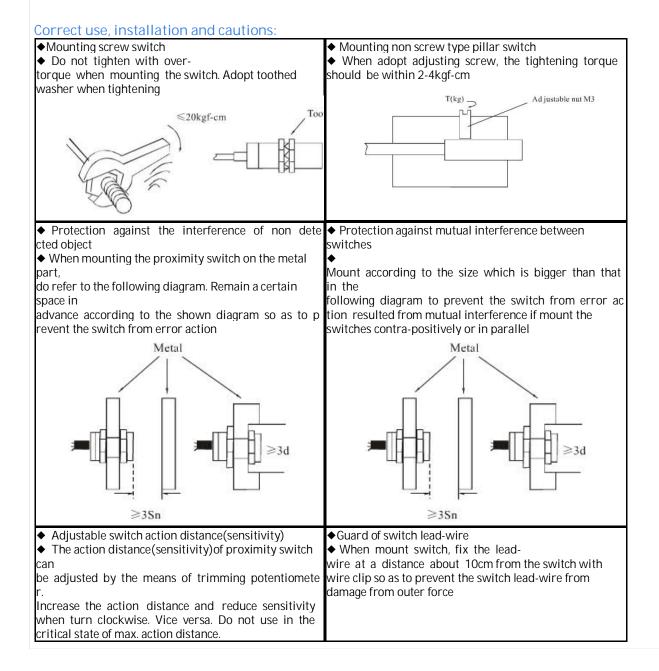

Explanation of technical terms:

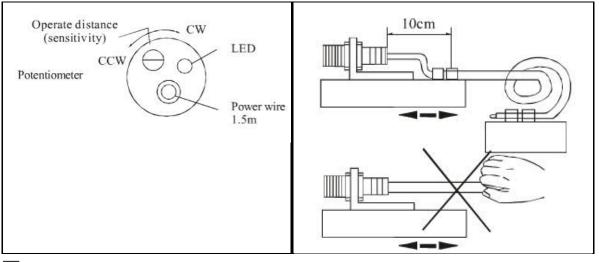

Main features:

Take high frequency Item	v oscillation type proximity sensor(front detector)as representative example	e to briefly explain general features Features		
The size of detected object and detection distance	Explanation If the detected object is square metal sheet with constant thickness (t=1mm), detect at detection distance X when change its side length dmm. X(mm)	When the detected object is bigger than standard detection distance is constant. According to different Machine type, sometimes the features will that mentioned on the left. To through type, the detection object is like cylinder metal bar	object When the material of detected object is non magnetic metal, the distance of action should descend. But when the foil material is approximately thicker than a.01mm,the detection distance will be the same as that of magnetic object If the film plating is extremely thin o non-conductive, detection cannot be conducted. The effect of cladding material take note of the changing of detection distance.	
The thickness of detected object and detection distance	Detect at detection distance Xmm(front detector)when change the thickness of the assigned standard detected object 1mm. X(mm) = 10 Detecting object: Al Detecting distance: 5mm 7 $Rest(OFF)$ $Rest(OFF)$ $Rest(OFF)$ 10 $Rest(OFF)$ 10 $Rest(OFF)$ 10 $Rest(OFF)$ 10 $Rest(OFF)$ 10	For more than 1mm thick magnetic metal like iron on the main, the detection distance will not change.	 ◆ About ambient weather In order to maintain reliable action and long service life, please avoid the (outdoor) occasion beyond the stipulated ambient temperature. Do not drench it with Water or water- soluble cutting lubricant when it is used with cover, 	
The effects resulted from the Thickness of detected object and cladding material	Because the detection to standard detected object will be effected by its shape, size, material, and various cladding material, confirm through detection distance Xmm measurement. Steel 100% Stainless steel About60% Yellow corpper About40% Corpper About28%	The effects resulted from detection distance and cladding material of the metal excluded iron will be different according to different machine type On the main, the machine type which detects all the metals will not be effected by cladding material.	although the proximity sensor is waterproof. Do not used in the occasions with chemical agents, especially strong base acid, nitric acid, hot strong sulfuric acid and so on. ◆ About maintenance and overhaul In order to keep the proximity sensor to work stably for long time, the following regular examinations should be performed just like general control. 1. Check the installation position of detected object and proximity sensor if any deviation, loosening or deformation exists. 2. Check the attached wires and connecting parts if any loosening bad contact or wire breaking off exists	

r	
	3. Check if
	there is any
	metallic
	powder
	accumulation
	or not
	4. Check if the
	temperature
	condition and
	surrounding
	environment
	condition are normal
	or not
	5. Check if the
	detection distance is
	normal or not

Cautions

•DC switch should adopt insulation transformer and ensure stable voltage mains corrugation.

◆ IF any electric power line or dynamic line passes through the surrounding of switch lead-wire, in order to prevent the switch from damage or error action, cover the metal bushing on the switch lead-wire and ground it to the earth.

• Set the switch use distance within the rated distance to avoid the effects from temperature and voltage

•Wiring while power-on is strictly prohibited. Connecting the wires strictly according to the wiring diagram and output return elementary diagram.

◆ If there are any special requirements to the switch like water proof, oil proof, acid proof, base proof, high temperature proof or with any other specifications, the users are required to give clear indication when placing an order. We can produce accord -ing to the requirements of the use.

Application illustration of proximity switch:
