TECHNICAL LITERATURE

TFT - LCD PANEL
(Open Cell)

MODEL No. **LK315D3XXXX**

The technical literature is subject to change without notice.
So, please contact SHARP or its representative before designing
your product based on this literature.

DEVELOPMENT DEPARTMENT. 2
LIQUID CRYSTAL DISPLAY DIVISION.1
LIQUID CRYSTAL DISPLAY GROUP
SHARP CORPORATION

1 Application

This specification applies to the color 32.0" TFT-LCD Cell LK315D3xxxx

(With parts (S-Dr, G-Dr, S-PWB, FPC, C-PWB, Thermally conductive interface Pad, C-PWB cover) to drive it.)

- * These specification are proprietary products of SHARP CORPORATION ("SHARP") and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP.
- * In case of using the device for applications such as control and safety equipment for transportation (aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.
- * Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment (trunk lines), nuclear power control equipment and medical or other equipment for life support.
- * SHARP assumes no responsibility for any damage resulting from the use of the device that does not comply with the instructions and the precautions specified in these specification.
- * Contact and consult with a SHARP sales representative for any questions about this device.

2 Overview

This Cell (LK315D3xxxx) is a color active matrix LCD PANEL incorporating amorphous silicon TFT (Thin Film Transistor), and the polarizer is contained. In addition, the Open Cell is composed of a color TFT-LCD Cell (LK315D3xxxx), Gate PWB and Source PWB. The following content can be achieved in using CONTROL-PWB "C-PWB" (RUNTK4323TPxx), CS-FPC and SG-FPC that SHARP specifies.

Graphics and texts can be displayed on a 1920×RGB×1080 dots panel with one billion colors by using 10bit+ LVDS (Low Voltage Differential Signaling) to interface, +12V of DC supply voltages.

And in order to improve the response time of LCD, This C-PWB applies the Over Shoot driving (O/S driving) technology for the control circuit. In the O/S driving technology, signals are being applied to the Liquid Crystal according to a pre-fixed process as an image signal of the present frame when a difference is found between image signal of the previous frame and that of the current frame after comparing them.

With combination of these technologies, motion blur can be reduced and clearer display performance can be realized. Moreover, thermally conductive interface Pad and the C-PWB cover are needed for the T-CON heat radiation of C-PWB.

3 Mechanical Specifications

Parameter	Specifications	Unit
Display size	80.1 (Diagonal)	cm
	31.55 (Diagonal)	inch
Active area	698.4(H) x 392.85 (V)	mm
Pixel Format	1920(H) x 1080(V) (1pixel = R + G + B dot)	pixel
Pixel pitch	0.36375(H) x 0.36375 (V)	mm
Pixel configuration	R, G, B vertical stripe	
Display mode	Normally black	
Cell Outline Dimensions[Note1]	782(H) x 473(V) x 1.8(D)	mm
Mass	(T.B.D.)	kg
Surface treatment [Note2]	Anti glare(Haze:7.3%) Hard coating : 2H and more	
Underside Surface treatment [Note2]	Plain	

[Note1] Outline dimensions are shown in P20.

[Note2] With the protection film removed.

4 Cell Driving Specifications

4.1 Driving interface of Control PWB SHARP specifies[RUNTK4323TPxx]

CNI (Interface signals and +12V DC power supply) (Shown in Fig1)

Using connector : FI-RNE51SZ-HF (Japan Aviation Electronics Ind., Ltd.)

Matching connector : I-RE51HL, FI-RE51CL (Japan Aviation Electronics Ind., Ltd.)

Matching LVDS transmitter : THC63LVD1023 or equivalent device

Input leak current (Low)		I _{IL1}	-	-	(400)	μA	V _I = 0V [Note 4]
		I _{IL2}	-	-	(40)	μA	V _I = 0V [Note 5]
Input leak current (High)		I _{IH1}	-	-	(40)	μA	V _I = 3.3V [Note 4]
		I _{IH2}	-	-	(400)	μA	V _I = 3.3V [Note 5]
Terminal resistor		R _T	-	(100)	-	Ω	Differential input

[Note] V_{CM}: Common mode voltage of LVDS driver.

[Note 1]

Input voltage sequences

$$0 < t_1 \leq 20\text{ms}$$

$$10 < t_2 \leq 50\text{ms}$$

$$10 < t_3 \leq 50\text{ms}$$

$$0 < t_4 \leq 1\text{s}$$

$$t_5 \geq 1000\text{ms}$$

$$t_6 \geq 0$$

$$t_7 \geq 300\text{ms}$$

Dip conditions for supply voltage

$$\text{a) } 6.5\text{V} \leq V_{CC} < 10.8\text{V}$$

$$t_d \leq 10\text{ms}$$

$$\text{b) } V_{CC} < 6.5\text{V}$$

Dip conditions for supply voltage is based on input voltage sequence.

V₁: 10.8V
V₂: 6.5V

※ Data1: ACK_±, AIN0_±, AIN1_±, AIN2_±, AIN3_±, AIN4_±, BCK_±, BIN0_±, BIN1_±, BIN2_±, BIN3_±, BIN4_±
CCK_±, CIN0_±, CIN1_±, CIN2_±, CIN3_±, CIN4_±, DCK_±, DIN0_±, DIN1_±, DIN2_±, DIN3_±, DIN4_±

*V_{CM} voltage pursues the sequence mentioned above

※ Data2: SELLVDS, FRAME, O/S_SET

[Note] About the relation between data input and back light lighting, please base on the above-mentioned input sequence. When back light is switched on before panel operation or after a panel operation stop, it may not display normally. But this phenomenon is not based on change of an incoming signal, and does not give damage to a liquid crystal display.

[Note 2] Typical current situation: 1024 gray-bar patterns. ($V_{CC} = +12.0V$)

The explanation of RGB gray scale is seen in section 8.

$V_{CC} = +12.0V$

$CK = 74.25MHz$

$T_h = 7.41\mu s$

4.5 Timing characteristics of input signals for C-PWB

Timing diagrams of input signal are shown in Fig.2.

Parameter		Symbol	Min.	Typ.	Max.	Unit	Remark	
Clock	Frequency	1/Tc	69	74.25	76	MHz		
Data enable signal	Horizontal period	TH	542	550	600	clock		
			7.3	7.41	8.1	μ s		
	Horizontal period (High)	THd	480	480	480	clock		
	Vertical period	TV	1096	1350	1125	1400	line	
			88.2	100	120	123.10	Hz	
Vertical period (High)	TVd	1080	1080	1080	line			

[Note]-When vertical period is very long, flicker and etc. may occur.

-Please turn off the module after it shows the black screen.

-Please make sure that length of vertical period should become of an integral multiple of horizontal length of period. Otherwise, the screen may not display properly.

-As for your final setting of driving timing, we will conduct operation check test at our side, please inform your final setting.

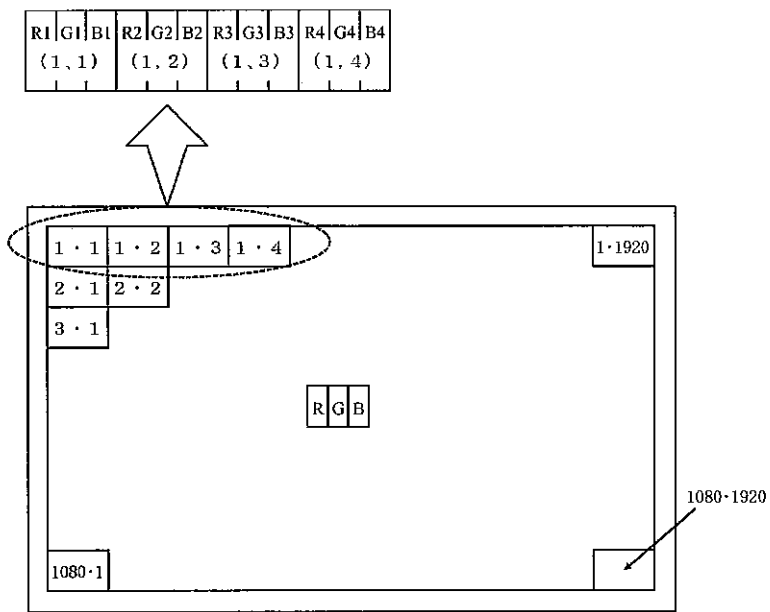

Fig.2. Timing characteristics of input signal

0: Low level voltage, 1: High level voltage.

Each basic color can be displayed in 1024 gray scales from 10 bits data signals. According to the combination of total 30 bits data signals, one billion-color display can be achieved on the screen.

6 Optical Specifications

6.1 Optical characteristics

$T_a=25^{\circ}\text{C}$, $V_{cc}=12.0\text{V}$, Timing:120Hz(typ. value)

Parameter		Symbol	Condition	Min.	Typ.	Max.	Unit	Remark
Viewing angle range	Horizontal	θ_{21} θ_{22}	$CR_{\geq 10}$	70	88	-	Deg.	[Note1,4]
	Vertical	θ_{11} θ_{12}		70	88	-	Deg.	
Contrast ratio		CR_n	$\theta=0 \text{ deg.}$	(3600)	(4500)	-	-	[Note2,4]
Response time		τ_{DRV}			(4)	(8)	ms	[Note3,4,5]
Luminance	White	x		Typ.-0.03	(0.280)	Typ.+0.03	-	[Note4]
		y		Typ.-0.03	(0.285)	Typ.+0.03	-	
	Red	x		Typ.-0.03	(0.640)	Typ.+0.03	-	
		y		Typ.-0.03	(0.345)	Typ.+0.03	-	
	Green	x		Typ.-0.03	(0.300)	Typ.+0.03	-	
		y		Typ.-0.03	(0.655)	Typ.+0.03	-	
	Blue	x		Typ.-0.03	(0.155)	Typ.+0.03	-	
		y		Typ.-0.03	(0.060)	Typ.+0.03	-	
Luminance	White	Y_L	(345)	(430)	-	cd/m^2		
Luminance uniformity	White	δ_w	-	-	(0.25)		[Note 7]	

-Optical characteristics are based on SHARP standard module LK315D3LA4S

-The measurement shall be executed 60 minutes after lighting at rating.

[Note]The optical characteristics are measured using the following equipment.

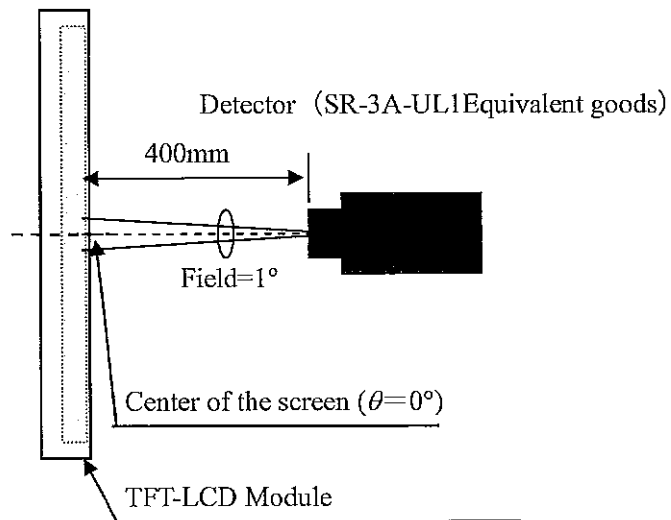

Fig.3-1 Measurement of viewing angle range and Response time.

Viewing angle range: EZ-CONTRAST
Response time: Photodiode

Fig.3-2 Measurement of Contrast, Luminance, Chromaticity.

[Note 1]Definitions of viewing angle range :

[Note 2]Definition of contrast ratio :

The contrast ratio is defined as the following.

$$\text{Contrast Ratio} = \frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

[Note 3]Definition of response time

The response time (τ_d and τ_r) is defined as the following figure and shall be measured by switching the input signal for “any level of gray (0%, 25%, 50%, 75% and 100%)” and “any level of gray (0%, 25%, 50%, 75% and 100%)”.

	0%	25%	50%	75%	100%
0%		tr:0%-25%	tr:0%-50%	tr:0%-75%	tr:0%-100%
25%	td: 25%-0%		tr: 25%-50%	tr:25%-75%	tr: 25%-100%
50%	td: 50%-0%	td: 50%-25%		tr: 50%-75%	tr: 50%-100%
75%	td: 75%-0%	td: 75%-25%	td: 75%-50%		tr: 75%-100%
100%	td: 100%-0%	td: 100%-25%	td: 100%-50%	td:100%-75%	

t*:x-y...response time from level of gray(x) to level of gray(y)

$$\tau_r = \Sigma(\text{tr}:x-y)/10, \tau_d = \Sigma(\text{td}:x-y)/10$$

[Note 4]This shall be measured at center of the screen.

[Note 5] This value is valid when O/S driving is used at typical input time value.

[Note 6]Definition of white uniformity ;

White uniformity is defined as the following with five measurements. (A~I)

$$\delta W = \frac{|\text{Maximum or Minimum luminance of nine points} - \text{Luminance of Center "E"}|}{\text{Luminance of center point "E"}}$$

7 Shipping and Packing

7.1 Packing form

- a) Piling number of cell boxes : T.B.D
- b) Packing quantity in one cell box : T.B.D
- c) Carton size :T.B.D
- d) Total mass of one carton filled with full cell :T.B.D

7.2 Label

- a) Cell Label
T.B.D
- b) Packing Label
T.B.D

8 Carton storage condition.

Temperature	0°C to 40°C
Humidity	95%RH or less
Reference condition	: 20°C to 35°C, 85%RH or less (summer) : 5°C to 15°C, 85%RH or less (winter) · the total storage time (40°C, 95%RH) : 240H or less
Sunlight	Be sure to shelter a product from the direct sunlight.
Atmosphere	Harmful gas, such as acid and alkali which bites electronic components and/or wires must not be detected.
Notes	Be sure to put cartons on palette or base, don't put it on floor, and store them with removing from wall Please take care of ventilation in storehouse and around cartons, and control changing temperature is within limits of natural environment
Storage life	Six months

9 Reliability

Reliability test item

No.	Test item	Condition
1	High temperature storage test	Ta = 60°C 240h
2	Low temperature storage test	Ta = -25°C 240h
3	High temperature and high humidity operation test	Ta = 40°C ; 95%RH 240h (No condensation)
4	High temperature operation test	Ta = 50°C 240h
5	Low temperature operation test	Ta = 0°C 240h

Above tests are executed under the CCFL module conditions.

10 Precautions

- Because the cell is weak to static electricity, please do not touch the terminal.
- Since the polarizer is easily damaged, pay attention not to scratch it.
- Since long contact with water may cause discoloration or spots, wipe off water drop immediately.
- When the polarizer is soiled, wipe it with absorbent cotton or other soft cloth.
- Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care.
- Precautions of peeling off the protection film.
 - Be sure to peel off slowly (recommended more than 7sec) and constant speed.
 - Peeling direction shows Fig.
 - Be sure to ground person with adequate methods such as the anti-static wrist band.
 - Be sure to ground S-PWB while peeling of the protection film.
 - Ionized air should be blown over during peeling action.
 - The protection film must not touch drivers and S-PWBs.
 - If adhesive may remain on the polarizer after the protection film peeling off, please remove with isopropyl-alcohol.

- Since the Open Cell consists of TFT and electronic circuits with CMOS-ICs, which are very weak to electrostatic discharges, persons who are handling the Open Cell should be grounded through adequate methods such as the anti-static wrist band. Connector pins should not be touched directly with bare hands.

- Reference : Process control standard of sharp

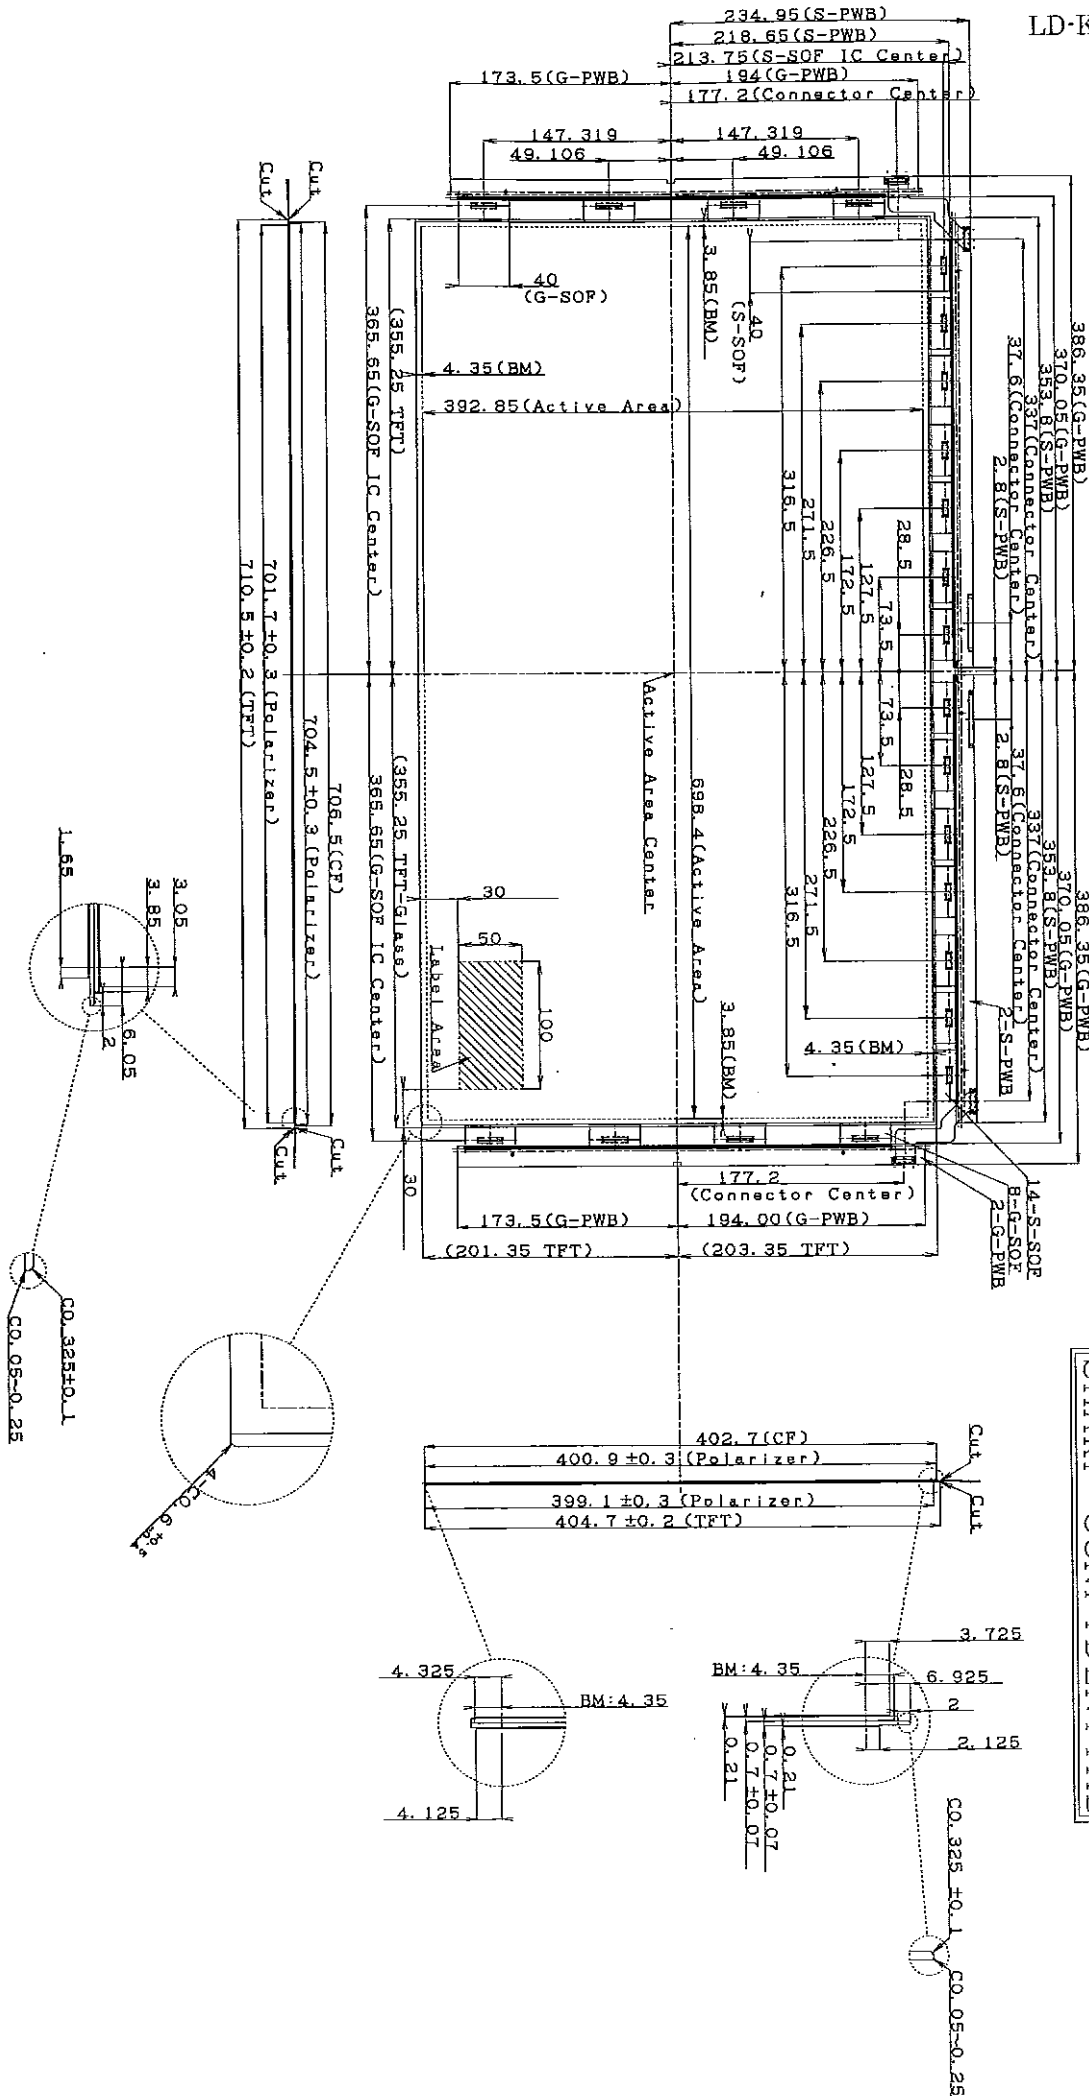

Item	Management standard value and performance standard
1 Anti-static mat (floor)	1 to 50 [M ohm]
2 Anti-static mat (shelf, desk)	1 to 100 [M ohm]
3 Ionizer	Attenuate from $\pm 1000V$ to $\pm 100V$ within 2 sec
4 Anti-static wrist band	0.8 to 10 [M ohm]
5 Anti-static wrist band entry and ground resistance	Below 1000 [ohm]
6 Temperature	22 to 26 [°C]
7 Humidity	60 to 70 [%RH]

- The Open Cell has some PWBs, take care to keep them from any stress or pressure when handling or installing the Open Cell, otherwise some of electronic parts on the PWBs may be damaged.

- i) Be sure to turn off the power supply when inserting or disconnecting the cable.
- j) Be sure to design the module and cabinet so that the Open Cell can be installed without any extra stress such as warp or twist.
- k) When handling the Open Cell and assembling them into module and cabinets, please be noted that long-term storage in the environment of oxidization or deoxidization gas and the use of such materials as reagent, solvent, adhesive, resin, etc. which generate these gasses, may cause corrosion and discoloration of the Open Cell.
- l) Applying too much force and stress to PWB and driver may cause a malfunction electrically and mechanically.
- m) The Open Cell has high frequency circuits. Sufficient suppression to EMI should be done by system manufacturers.
- n) Please be careful since image retention may occur when a fixed pattern is displayed for a long time.
- o) The chemical compound, which causes the destruction of ozone layer, is not used.
- p) This Open Cell is corresponded to RoHS. "R.C." label on the side of palette shows it.
- q) When any question or issue occurs, it shall be solved by mutual discussion.
