1 Application

This specification applies to the color 40.0" TFT-LCD Open Cell LK400D3HC75 (With parts (S-Dr, G-Dr, S-PWB) to drive it.)

- * This specification sheets are proprietary products of SHARP CORPORATION ("SHARP") and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP.
- * In case of using the device for applications such as control and safety equipment for transportation (aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.
- * Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment (trunk lines), nuclear power control equipment and medical or other equipment for life support.
- * SHARP assumes no responsibility for any damage resulting from the use of the device that does not comply with the instructions and the precautions specified in these specification.
- * Contact and consult with a SHARP sales representative for any questions about this device.

2 Overview

This Open Cell (LK400D3HC75) is a color active matrix LCD PANEL incorporating amorphous silicon TFT (<u>Thin Film Transistor</u>), polarizers, Control-PWB(C-PWB), Source-PWBs, Source-Drivers, Gate-Drivers and FPCs. The following content can be achieved in using C-PWB (LK0DZ1C0539) that SHARP specifies.

Graphics and texts can be displayed on a $1920 \times RGB \times 1080$ dots panel with one billion colors by using 10bit LVDS (<u>Low Voltage Differential Signaling</u>) to interface, +12V of DC supply voltages.

In order to improve the response time of LCD, This C-PWB applies the Over Shoot driving (O/S driving) technology for the control circuit. In the O/S driving technology, signals are being applied to the Liquid Crystal according to a pre-fixed process as an image signal of the present frame when a difference is found between image signal of the previous frame and that of the current frame after comparing them.

With combination of these technologies, motion blur can be reduced and clearer display performance can be realized.

[Caution] You should design thermal conductive interface pad and C-PWB cover enough to radiate heat from T-CON IC in C-PWB.

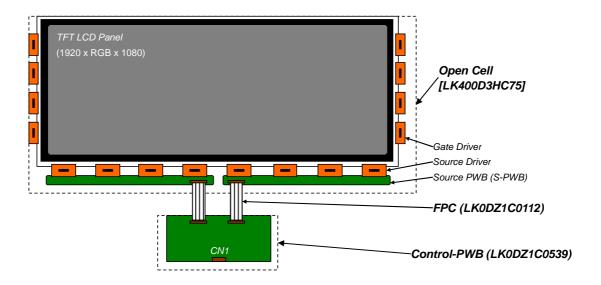

Fig.1 Overview of Open-Cell: LK400D3HC75 & peripheral parts.

3 Mechanical Specifications

| Parameter | Specifications | Unit | |
|--------------------------------|---------------------------------|-------|--|
| Display size | 101.609 (Diagonal) | cm | |
| Display size | 40.0036 (Diagonal) | inch | |
| Active area | 885.60(H) x 498.15 (V) | mm | |
| Pixel Format | 1920(H) x 1080(V) | nivol | |
| Fixer Politiat | (1pixel = R + G + B dot) | pixel | |
| Pixel pitch | 0.36375(H) x 0.36375 (V) | mm | |
| Pixel configuration | R, G, B vertical stripe | | |
| Display mode | Normally black | | |
| Cell Outline Dimensions[Note1] | 921.18 (H) x 548.55(V) x 1.8(D) | mm | |
| Mass | 1.88 <u>+</u> 0.3 | kg | |
| Surface treatment [Note2] | Anti glare, Low Haze | | |
| | Hard coating: 2H and more | | |
| Underside Surface | Hard coat less | | |
| treatment [Note2] | | | |

[Note1] Outline dimensions are shown in P20.

[Note2] With the protection film removed.

4 Cell Driving Specifications

4.1 Driving interface of Control PWB SHARP specifies

Parts code: LK0DZ1C0539

CN1 (Interface signals and +12V DC power supply) shown in Fig.1

Using connector : 187124-51221 (P-Two)

Matching connector : FI-RE51HL, FI-RE51CL (Japan Aviation Electronics Ind., Ltd.) or

187087-51193 (P-Two) or equivalent device

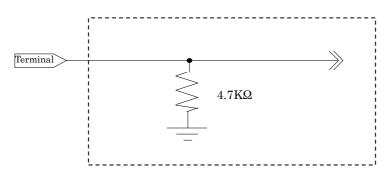

Matching LVDS transmitter : THC63LVD1023 or equivalent device

NA: Not Available

^(*)Since the display position is prescribed by the rise of DE(Display Enable)signal, please do not fix DE signal at "High" during operation. And you should input DE signal in all LVDS port.

DE: Display Enable, NA: Not Available (Fixed Low)

4.2 Interface block diagram

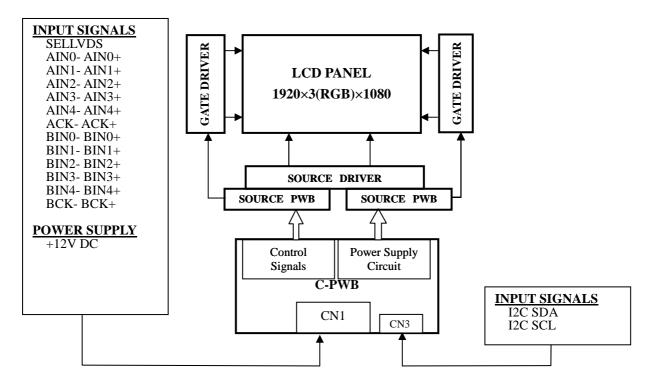

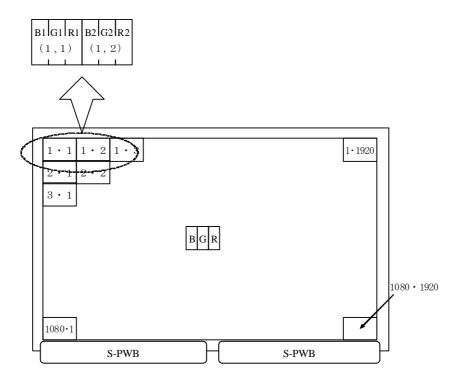

Fig.2 Interface block diagram

4.3 Display position of data

[Note] You should assemble Open-Cell for S-PWBs to be located at the downside of your TV set.

4.4 Vcom Adjusting interface of Control PWB SHARP specifies[LK0DZ1C0539]

For the prevention of long-time image sticking of TFT-LCD panel, be sure to adjust Vcom flicker to be minimized on the center of display by visual or flicker meter.

[Note 1] Please adjust VCOM voltage at below pattern:

| 0.0 | V512 | 0Λ | V512 | 0Λ | V512 | 0.0 | V512 | 0Λ |
|---------------|------|------|------|------|------------|------|------------|---------------|
| V512 | 0Λ | V512 | 0Λ | V512 | 0Λ | V512 | 0Λ | V512 |
| 0.0 | V512 | 0.0 | V512 | 0.0 | V512 | 0.0 | V512 | 0.0 |
| | | | | | | | | لہ |
| 1 pixel 1 dot | | | | | | | | dot |

[Note 2] VCOM voltage can be adjusted through via hole (CN3). Potentiometer IC and via hole are as follows:

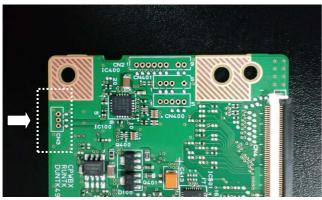

IC for adjusting VCOM : MAX9667ETP+ (MAXIM)
Using Via Hole : 1.5mm Pitch (\$\phi 0.7mm \)

Matting a support of the continuous (housing) 2P, S7N.

Mating connector : (housing)3P-SZN,

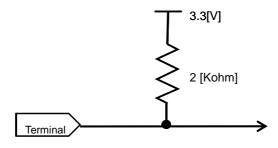

(contact)SZN-002T-P0.7K (JST Co.,Ltd.)

Communication method : I2C

| Pin No. | symbol | Function | Remark |
|---------|----------------------|----------|---------------------|
| 1 | SDA | I2C DATA | Pull up:3.3V[Note1] |
| 2 | SCL | I2C CLK | Pull up:3.3V[Note1] |
| 3 | GND | GND | - |

| Input leak current (Low) | | IIL | - | - | 1700 | μΑ | $V_I = 0V$ [Note 4] | |
| Input leak current (High) | | Ітн | - | - | 700 | μΑ | V _I = 3.3V [Note 3] | |
| Tern | ninal r | resistor | Rт | - | 100 | - | Ω | Differential input |

[Note]Vcm: Common mode voltage of LVDS driver.

[Note1]

Input voltage sequences

 $50\mu s < t1 < 20ms$

20ms < t2 < 50ms

20ms < t3 < 50ms

 $0 < t_4 < 1s$

 $1s < t_{5-1}$ $1s < t_{5-2}$

 $0 < t_{6-1}$ $0 < t_{6-2}$

 $1s < t_7$

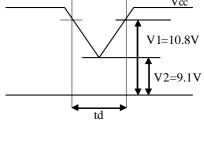

Dip conditions for supply voltage

 $V2 \leq Vcc < V1$

td < 10ms

This case is based on input voltage sequences.

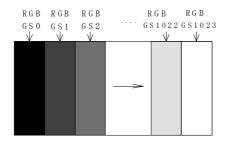

Data1: ACK±, AIN0±, AIN1±, AIN2±, AIN3±, AIN4±,BCK±, BIN0±, BIN1±, BIN2±, BIN3±, BIN4±

※ Data2: SELLVDS

*About the relation between data input and back light lighting, we recommend the above-mentioned input sequence. If the back light is switched on before a panel operation begins or after a panel operation stops, the screen may not be displayed properly. But this phenomenon is not caused by change of an incoming signal, and does not give damage to a liquid crystal display.

[Note 2] Typical current situation: 1024 gray-bar patterns. (Vcc = +12.0V) The explanation of RGB gray scale is seen in section 8.

Vcc=+12.0V CK=74.25MHz $Th=14.8\mu s$

[Note 3] SELLVDS

[Note 4] SCL, SDA

 $[Note~5]~ACK\pm, AIN0\pm, AIN1\pm, AIN2\pm, AIN3\pm, AIN4\pm, BCK\pm, BIN0\pm, BIN1\pm, BIN2\pm, BIN3\pm, BIN4\pm, BIN4\pm,$

[Note 6] Vcc12V inrush current waveform is as follows. (I_{RUSH} : t_1 =500 μ s)

TBD

7 Timing characteristics of input signals for C-PWB

7.1 Timing characteristics

Timing diagrams of input signal are shown in Fig.3.

| Parameter | | Symbol | Min. | Ty | p. | Max. | Unit | Remark |
|-------------|-----------------------------|--------|------|------|------|------|-------|--------|
| | | | | NTSC | PAL | | | |
| Clock | Frequency | 1/Tc | 69 | 74. | .25 | 76 | MHz | |
| | Horizontal period | TH | 1050 | 11 | 00 | 1300 | clock | |
| | Horizontai periou | 111 | 14.2 | 14.8 | | 16.1 | μs | |
| Data enable | Horizontal period (High) | THd | 960 | 96 | 60 | 960 | clock | |
| signal | Vertical period | TV | 1109 | 1125 | 1350 | 1400 | line | |
| | vertical period | 1 V | 47 | 60 | 50 | 63 | Hz | |
| | Vertical period (High) | TVd | 1080 | 10 | 80 | 1080 | line | |

[Note]-When vertical period is very long, flicker and etc. may occur.

- -Please turn off the module after it shows the black screen.
- -Please make sure that length of vertical period should become of an integral multiple of horizontal length of period. Otherwise, the screen may not display properly.
- -As for your final setting of driving timing, we will conduct operation check test at our side, please inform your final setting.

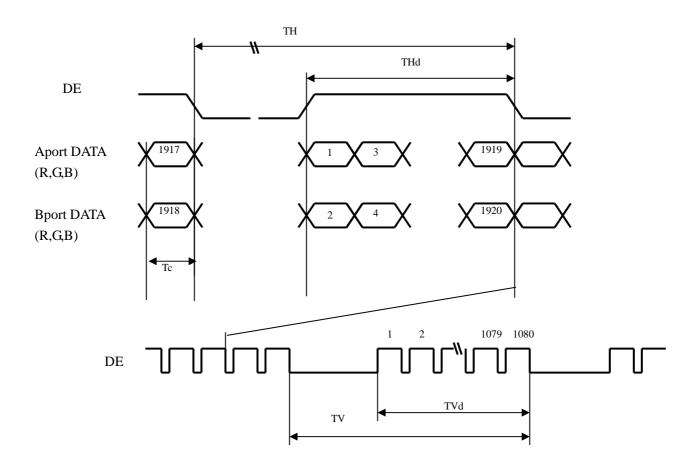

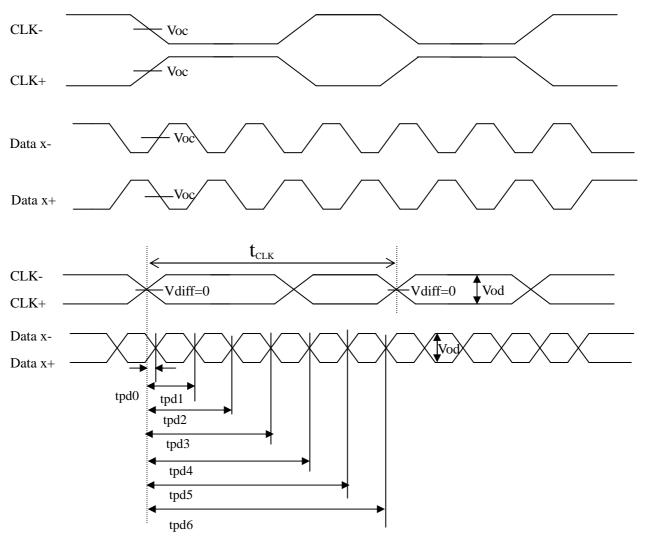

Fig.3 Timing characteristics of input signal.

7.2 LVDS signal characteristics

| | The item | Symbol | min. | typ. | max. | unit |

0: Low level voltage,

1: High level voltage.

Each basic color can be displayed in 1021 gray scales from 10 bits data signals. According to the combination of total 30 bits data signals, one billion-color display can be achieved on the screen.

9 Optical Specifications

| Ta=25°C, Vcc=12.0V, Frame rate:60Hz (ty) |

⁻Optical characteristics are based on SHARP standard module.

[Note]The optical characteristics are measured using the following equipment.

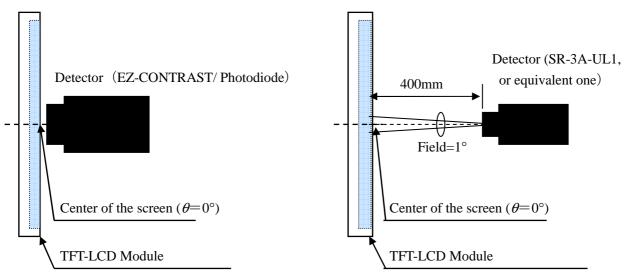

Fig.4-1 Measurement of viewing angle range and Response time.

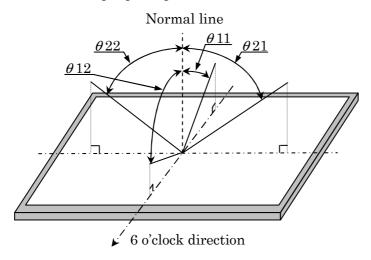

Viewing angle range: EZ-CONTRAST

Response time: Photodiode

Fig.4-2 Measurement of Contrast, Luminance, Chromaticity.

⁻The measurement shall be executed 60 minutes after lighting at rating.

[Note 1] Definitions of viewing angle range:

[Note 2] Definition of contrast ratio:

The contrast ratio is defined as the following.

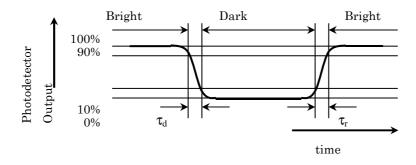

[Note 3] Definition of response time

The response time (τ_d and τ_r) is defined as the following figure and shall be measured by switching the input signal for "any level of gray (0%, 25%, 50%, 75% and 100%)" and "any level of gray (0%, 25%, 50%, 75% and 100%)".

| | 0% | 25% | 50% | 75% | 100% |
|------|-------------|--------------|--------------|-------------|--------------|
| 0% | | tr:0%-25% | tr:0%-50% | tr:0%-75% | tr:0%-100% |
| 25% | td: 25%-0% | | tr: 25%-50% | tr25%-75% | tr: 25%-100% |
| 50% | td: 50%-0% | td: 50%-25% | | tr: 50%-75% | tr: 50%-100% |
| 75% | td: 75%-0% | td: 75%-25% | td: 75%-50% | | tr: 75%-100% |
| 100% | td: 100%-0% | td: 100%-25% | td: 100%-50% | td:100%-75% | |

t*:x-y...response time from level of gray(x) to level of gray(y)

$$\tau_r = \Sigma(tr{:}x{-}y)/10$$
 , $\tau_d = \Sigma(td{:}x{-}y)/10$

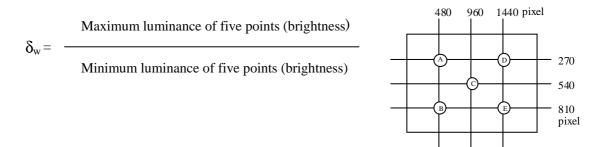

[Note 4] This shall be measured at center of the screen.

[Note 5] This value is valid when O/S driving is used at typical input time value.

[Note 6] Definition of white uniformity;

White uniformity is defined as the following with five measurements. (A~E)

10 Shipping and Packing

10.1 Packing form

a) Open Cell quantity in 1 cell box : 15 pcs

b) Piling number of cell box : 14 pcs (Max.)

c) 1 palette size : 1390(W) x 1150(D) x 1059(H) [mm]

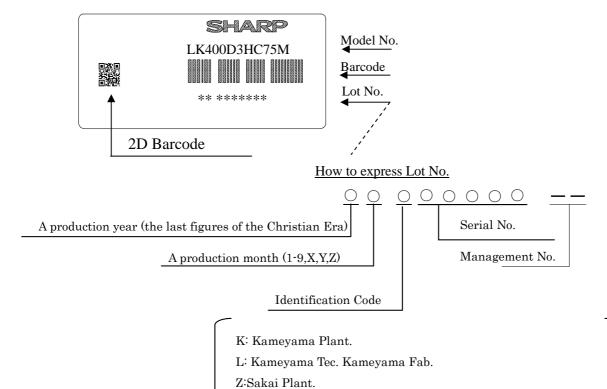

d) Total mass of 1 palette filled with full open cells : (490.5)kg (Max.)

10.2 Label

a) Cell label

This label is stuck on the protection film of front polarizer. (Please trace the Cell lot number after the film is peeled off.)

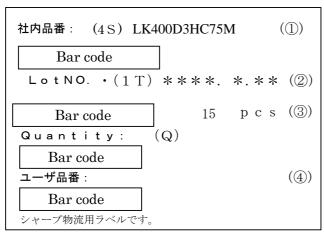

ex) [LK400D3HC75] JAPAN PRODUCTION

b) Packing Label

This label is stuck on the packing case (cell box) and carton.

Ex) [LK400D3HC75] JAPAN PRODUCTION

- ① Management No.
- ② Lot No. (Date)
- 3 Quantity
- 4 Model No.

11 Carton storage condition.

Temperature 0°C to 40°C Humidity 95%RH or less

Reference condition $: 20^{\circ}\text{C} \text{ to } 35^{\circ}\text{C}, 85\%\text{RH or less}$ (summer)

: 5°C to 15°C, 85%RH or less (winter)

 \cdot the total storage time (40°C, 95%RH) : 240H or less

Sunlight Be sure to shelter a product from the direct sunlight.

Atmosphere Harmful gas, such as acid and alkali which bites electronic components and/or

wires must not be detected.

Notes Be sure to put cartons on palette or base, don't put it on the floor, and store them

keeping off the wall. Please take care of ventilation in storehouse and around cartons,

and control temperature not to exceed the limit one of natural environment.

Storage life Six months

12 Reliability

Reliability test item:

| No. | Test item | Condition |
|-----|---|---|
| 1 | High temperature storage test | $Ta = 60^{\circ}C$ 240h |
| 2 | Low temperature storage test | $Ta = -25^{\circ}C$ 240h |
| 3 | High temperature and high humidity operation test | Ta = 40°C; 95%RH 240h (No condensation) |
| 4 | High temperature operation test | $Ta = 50^{\circ}C$ 240h |
| 5 | Low temperature operation test | Ta = 0°C 240h |
| 6 | Vibration test (Cell Box with full Open Cells) | X and Y direction: 15min, Z direction: 60min. 5Hz to 50Hz acceleration velocity: 1.0G Sweeping ratio: 3min |
| 7 | Drop test (Cell Box with full Open Cells) | Height: 25cm (corner and edge), 32cm (surface) Number: 8times (corner 1time and edge 3times and surface 4times) |

Above tests are executed under the CCFL module conditions.

13 Precautions

- a) Be sure to turn off the power supply when inserting or disconnecting the cable.
- b) Be sure to design the cabinet so that the Open Cell can be installed without any extra stress such as warp or twist.
- c) Since the polarizer is easily damaged, pay attention not to scratch it.
- d) Since long contact with water may cause discoloration or spots, wipe off water drop immediately.
- e) When the polarizer is soiled, wipe it with absorbent cotton or other soft cloth.
- f) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care.
- g) Precautions of peeling off the protection film.
 - Be sure to peel off slowly (recommended more than 7sec) and constant speed.
 - Peeling direction shows below Fig.5.
 - Be sure to ground person with adequate methods such as the anti-static wrist band.
 - Be sure to ground S-PWB while peeling of the protection film.
 - Ionized air should be blown over during peeling action.
 - The protection film must not touch drivers and S-PWBs.
 - If adhesive may remain on the polarizer after the protection film peeling off, please remove with isopropyl-alcohol.

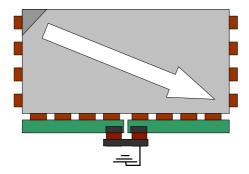

Fig.5 Direction of peeling off a protection film.

- h) Since the Open Cell consists of TFT and electronic circuits with CMOS-ICs, which are very weak to electrostatic discharges, persons who are handling the Open Cell should be grounded through adequate methods such as the anti-static wrist band. Connector pins should not be touched directly with bare hands.
 - Reference: Process control standard of sharp

| | Item | Management standard value and performance standard |
|---|----------------------------------|---|
| 1 | Anti-static mat (floor) | 1 to 50 [M ohm] |
| 2 | Anti-static mat (shelf, desk) | 1 to 100 [M ohm] |
| 3 | Ionizer | Attenuate from ± 1000 V to ± 100 V within 2 sec |
| 4 | Anti-static wrist band | 0.8 to 10 [M ohm] |
| 5 | Anti-static wrist band entry and | Below 1000 [ohm] |
| | ground resistance | |
| 6 | Temperature | 22 to 26 [°C] |
| 7 | Humidity | 60 to 70 [%RH] |

- i) The Open Cell has some PWBs, take care to prevent them from any stress or pressure when handling or installing the Open Cell, otherwise some of electronic parts on the PWBs may be damaged.
- j) Be sure to turn off the power supply when inserting or disconnecting the cable.
- k) Be sure to design the module and cabinet so that the Open Cell can be installed without any extra stress such as warp or twist.
- When handling the Open Cell and assembling them into module and cabinets, please be noted that long-term storage in the environment of oxidization or deoxidization gas and the use of such materials as reagent, solvent, adhesive, resin, etc. which generate these gasses, may cause corrosion and discoloration of the Open Cell.
- m) Applying too much force and stress to PWB and driver may cause a malfunction electrically and mechanically.
- n) The Open Cell has high frequency circuits. Sufficient suppression to EMI should be done by system manufacturers.
- o) Please be careful since image retention may occur when a fixed pattern is displayed for a long time.
- p) The chemical compound, which causes the destruction of ozone layer, is not used.
- q) Please design the heat dissipation of the module with enough care for C-PWB, Source-Driver and Gate-Driver' IC.
- r) This Open Cell is corresponded to RoHS. "R.C." label on the side of palette shows it.
- s) When any question or issue occurs, it shall be solved by mutual discussion.
