1. Application

This specification applies to the color 52.0" TFT-LCD module LK520D3LZ18.

- * These specification sheets are proprietary products of SHARP CORPORATION ("SHARP") and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP.
- * In case of using the device for applications such as control and safety equipment for transportation (aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.
- * Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment (trunk lines), nuclear power control equipment and medical or other equipment for life support.
- * SHARP assumes no responsibility for any damage resulting from the use of the device that does not comply with the instructions and the precautions specified in these specification sheets.
- * Contact and consult with a SHARP sales representative for any questions about this device.

2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT ($\underline{\text{Thin }}\underline{\text{Film }}\underline{\text{T}}$ ransistor). It is composed of a color TFT-LCD panel, driver ICs, control circuit, power supply circuit, inverter circuit and back light system etc. Graphics and texts can be displayed on a $1920 \times \text{RGB} \times 1080$ dots panel with 16,777,216 colors by using LVDS ($\underline{\text{Low }}\underline{\text{V}}$ oltage $\underline{\text{D}}$ ifferential $\underline{\text{S}}$ ignaling) to interface, +12V of DC supply voltages.

This module also includes the DC/AC inverter to drive the CCFT. (+24V of DC supply voltage)

And in order to improve the response time of LCD, this module applies the Over Shoot driving (O/S driving) technology for the control circuit .In the O/S driving technology, signals are being applied to the Liquid Crystal according to a pre-fixed process as an image signal of the present frame when a difference is found between image signal of the previous frame and that of the current frame after comparing them.

With this technology, image signals can be set so that liquid crystal response completes within one frame. As a result, motion blur reduces and clearer display performance can be realized.

3. Mechanical Specifications

Parameter	Specifications	Unit
Display size	132.174 (Diagonal)	cm
Display size	52.0 (Diagonal)	inch
Active area	1152.0(H) x 648.0 (V)	mm
Pixel Format	1920(H) x 1080(V)	pixel
rixei Format	(1pixel = R + G + B dot)	pixei
Pixel pitch	0.600(H) x 0.600 (V)	mm
Pixel configuration	R, G, B vertical stripe	
Display mode	Normally black	
Unit Outline Dimensions (*1)	1219.0(W) x 706.7(H) x 64.6(D)	mm
Mass	21.0 ±1.0	kg
Surface treatment	Anti glare	
Surface treatment	Hard coating: 2H	

(*1) Outline dimensions are shown in Fig.1 (excluding protruding portion)

4. Input Terminals

5	Temp2	Data2 of panel surface temperature	Pull up 3.3V	[Note 2]
6	Temp1	Data1 of panel surface temperature	Pull up 3.3V	[Note 2]
7	GND	GND		

^{*}L: Low level voltage (GND) H: High level voltage(3.3V)

[Note 1] In case of O/S set setting "L"(O/S OFF), it should be set the TEMP1~3 to "L".

[Note 2] The equivalent circuit figure of the terminal

According as the surface temperature of the panel, enter the optimum 3 bit signal into pin No.4, 5 and 6. Measuring the correlation between detected temperature by the sensor on PWB in user's side and actual surface temperature of panel at center, convert the temperature detected by the sensor to the surface temperature of panel to enter the 3 bit temperature data.

For overlapping temperatures (such as 5°C, 10°C, 15°C, 20°C, 25°C, 30°C, 35°C) select the optimum parameter, judging from the actual picture image.

		Surface temperature of panel

[Note 1] Inverter ON/OFF

Input voltage	Function
0V	Inverter : OFF
3.3V	Inverter : ON

[Note 2]Brightness Control

PWM brightness control is regulated by analog input voltage (0V to 3.3V).

Ta=25

	MIN	TYP	MAX	Function
Input voltage [V]	0	<->	3.3	0V: Dark - 3.3V: Bright
[Reference]	20	<->	100	
Brightness ratio [%]	20	\- >	100	

[Note] PWM frequency: 275±10Hz

[Note] There is a case that lamp mura may happen, depending on ambient temperature and dimming.

Dimming level should be set according to your evaluation of actual display performance.

(Minimum input voltage 1.4V at below 15)

4.4. The back light system characteristics

The back light system is direct type with 24 CCFTs (Cold Cathode Fluorescent Tube).

The characteristics of the lamp are shown in the following table. The value mentioned below is at the case of one CCFT.

Item	Symbol	Min.	Тур.	Max.	Unit	Remarks
Life time	TL	-	60000	-	Hour	[Note]

[Note]

- Lamp life time is defined as the time when brightness becomes 50% of the original value in the continuous operation under the condition of Ta=25°C and brightness control(V_{BRT}=100%).
- Above value is applicable when the long side of LCD module is placed horizontally (Landscape position). (Lamp lifetime may vary if LCD module is in portrait position due to the change of mercury density inside the lamp.)

5. Absolute Maximum Ratings

Parameter	Symbol	Condition	Ratings	Unit	Remark	
Input voltage (for Control)	Vı	Ta=25 °C	-0.3 ~ 3.6	V	[Note 1]	
12V supply voltage (for Control)	VCC	Ta=25 °C	0~+14	V		
Input voltage (for Inverter)	$egin{array}{c} V_{ m ON} \ V_{ m BRT} \end{array}$	Ta=25 °C	0~+6	V		
24V supply voltage (for Inverter)	V_{INV}	Ta=25 °C	0 ~ +29	V		
Storage temperature	Tstg	-	- 25 ∼ +60	°C	DI. 4. 21	
Operation temperature (Ambient) Topa		-	0 ~ +50	°C	[Note 2]	

[Note 1] SELLVDS, R/L, U/D, FRAME, O/S_set, TEMP1~3

[Note 2] Humidity 95%RH Max.(Ta 40°C)

Maximum wet-bulb temperature at 39 °C or less.(Ta>40°C)

No condensation.

6. Electrical Characteristics

6.1. Control circuit driving

Dip conditions for supply voltage

a) 6.5V Vcc < 10.8V td 10ms b) Vcc < 6.5V

Dip conditions for supply voltage is based on input voltage sequence.

Data1: ACK±, AIN0±, AIN1±, AIN2±, AIN3±, BCK±, BIN0±, BIN1±, BIN2±, BIN3± *V_{CM} voltage pursues the sequence mentioned above

Data2: R/L, U/D, SELLVDS, FRAME, O/S_SET, TEMP1, TEMP2, TEMP3

[Note] About the relation between data input and back light lighting, please base on the above-mentioned input sequence. When back light is switched on before panel operation or after a panel operation stop, it may not display normally. But this phenomenon is not based on change of an incoming signal, and does not give damage to a liquid crystal display.

[Note 2] Typical current situation: 255 gray-bar patterns. (Vcc = +12.0V) The explanation of RGB gray scale is seen in section 8.

Vcc = +12.0V CK = 74.25MHz $Th = 14.8\mu s$

Luminance uniformity	White	δw		-	-	1.25	-	[Note 6]

Measurement condition: Set the value of V_{BRT} to maximum luminance of white.

[Note] The optical characteristics are measured using the following equipment.

Fig.4-1 Measurement of viewing angle range and Response time.

Viewing angle range: EZ-CONTRAST

Response time: Photodiode

Fig.4-2 Measurement of Contrast, Luminance, Chromaticity.

^{*}The measurement shall be executed 60 minutes after lighting at rating.

[Note 1] Definitions of viewing angle range:

www.DataSheet4II.com

[Note 2]Definition of contrast ratio:

The contrast ratio is defined as the following.

[Note 3]Definition of response time

The response time (τ_d and τ_r) is defined as the following figure and shall be measured by switching the input signal for "any level of gray (0%, 25%, 50%, 75% and 100%)" and "any level of gray (0%, 25%, 50%, 75% and 100%)".

	0%	25%	50%	75%	100%
0%		tr:0%-25%	tr:0%-50%	tr:0%-75%	tr:0%-100%
25%	td: 25%-0%		tr: 25%-50%	tr25%-75%	tr: 25%-100%
50%	td: 50%-0%	td: 50%-25%		tr: 50%-75%	tr: 50%-100%
75%	td: 75%-0%	td: 75%-25%	td: 75%-50%		tr: 75%-100%
100%	td: 100%-0%	td: 100%-25%	td: 100%-50%	td:100%-75%	

t*:x-y...response time from level of gray(x) to level of gray(y)

$$\tau_r = \Sigma(tr:x\text{-}y)/10$$
 , $\tau_d = \Sigma(td:x\text{-}y)/10$

[Note 4] This shall be measured at center of the screen.

[Note 5] This value is valid when O/S driving is used at typical input time value.

[Note 6] Definition of white uniformity;

White uniformity is defined as the following with five measurements. (A~E)

www.DataSheet4U.com

$$\delta w = \frac{\text{Maximum luminance of five points (brightness)}}{\text{Minimum luminance of five points (brightness)}}$$

10. Handling Precautions of the module

- a) Be sure to turn off the power supply when inserting or disconnecting the cable.
- b) This product is using the parts (inverter, CCFT etc), which generate the high voltage. Therefore, during operating, please don't touch these parts.
- c) Brightness control voltage is switched for "ON" and "OFF", as shown in Fig.4. Voltage difference generated by this switching, ΔVINV, may affect a sound output, etc. when the power supply is shared between the inverter and its surrounding circuit. So, separate the power supply of the inverter circuit with the one of its surrounding circuit.

Fig.4 Brightness control voltage.

- *Since inverter board's GND is not connected to the frame of the LCD module, please connect it with the Customer's GND of inverter power supply.
- d) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
- e) Since the front polarizer is easily damaged, pay attention not to scratch it.
- f) Since long contact with water may cause discoloration or spots, wipe off water drop immediately.
- g) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- h) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care.

- i) Since CMOS LSI is used in this module, take care of static electricity and take the human earth into consideration when handling.
- j) The module has some printed circuit boards (PCBs) on the back side, take care to keep them form any stress or pressure when handling or installing the module; otherwise some of electronic parts on the PCBs may be damaged.
- k) Observe all other precautionary requirements in handling components.
- l) When some pressure is added onto the module from rear side constantly, it causes display non-uniformity issue, functional defect, etc. So, please avoid such design.
- m) When giving a touch to the panel at power on supply, it may cause some kinds of degradation. In that case, once turn off the power supply, and turn on after several seconds again, and that is disappear.
- n) When handling LCD modules and assembling them into cabinets, please be noted that long-term storage in the environment of oxidization or deoxidization gas and the use of such materials as reagent, solvent, adhesive, resin, etc. which generate these gasses, may cause corrosion and discoloration of the LCD modules.
- o) This LCD module is designed to prevent dust from entering into it. However, there would be a possibility to have a bad effect on display performance in case of having dust inside of LCD module. Therefore, please ensure to design your TV set to keep dust away around LCD module.

11. Packing form

a) Piling number of cartons: 2 maximum

b) Packing quantity in one carton: 8 pcs.

c) Carton size: 1320 (W) × 1110 (D) × 940 (H) (mm)

d) Total mass of one carton filled with full modules: 225kg (Max)

12. Reliability test item

. 110	nability test item								
No.	Test item	Condition							
1	High temperature storage test	Ta=60°C 240h							
2	Low temperature storage test	Ta=-25°C 240h							
3	High temperature and high humidity	Ta=40°C; 95%RH 240h							
3	operation test	(No condensation)							
4	High temperature operation test	Ta=50°C 240h							
5	Low temperature operation test	Ta=0°C 240h							
	Vibration test	Frequency: 10~57Hz/Vibration width (one side): 0.075mm							
6	(non-operation)	: 58~500Hz/Acceleration: 9.8 m/s ²							
0		Sweep time: 11 minutes							
		Test period: 3 hours (1h for each direction of X, Y, Z)							
	Shock test	Maximum acceleration: 294m/s ²							
7	(non-operation)	Pulse width: 11ms, sinusoidal half wave							
	(non-operation)	Direction: +/-X, +/-Y, +/-Z, once for each direction.							
		* At the following conditions, it is a thing without incorrect							
		operation and destruction.							
		(1)Non-operation: Contact electric discharge ±10kV							
8	ESD	Non-contact electric discharge ±20kV							
		(2)Operation Contact electric discharge ±8kV							
		Non-contact electric discharge ±15kV							
		Conditions: 150pF, 330ohm							

[Result evaluation criteria]

Under the display quality test condition with normal operation state, there shall be no change, which may affect practical display function.

13. Others

1) Lot No. Label;

vww.DataSheet4U.com

The label that displays SHARP, product model (LK520D3LZ18), a product number is stuck on the back of the module.

2) Packing Label

- 3) Adjusting volume has been set optimally before shipment, so do not change any adjusted value. If adjusted value is changed, the specification may not be satisfied.
- 4) Disassembling the module can cause permanent damage and should be strictly avoided.
- 5) Please be careful since image retention may occur when a fixed pattern is displayed for a long time.
- 6) The chemical compound, which causes the destruction of ozone layer, is not being used.
- 7) Cold cathode fluorescent lamp in LCD PANEL contains a small amount of mercury. Please follow local ordinances or regulations for disposal. This sentence is displayed on the backside of the module.

- 8) When any question or issue occurs, it shall be solved by mutual discussion.
- 9) This module is corresponded to RoHS.

14. Carton storage condition

Temperature 0°C to 40°C

Humidity 95%RH or less

Reference condition : 20°C to 35°C, 85%RH or less (summer)

: 5°C to 15°C, 85%RH or less (winter)

• the total storage time (40°C,95%RH) : 240H or less

Sunlight Be sure to shelter a product from the direct sunlight.

Atmosphere Harmful gas, such as acid and alkali which bites electronic components and/or

wires must not be detected.

Notes Be sure to put cartons on palette or base, don't put it on floor, and store them with

removing from wall

Please take care of ventilation in storehouse and around cartons, and control

changing temperature is within limits of natural environment

Storage life 1 year
