**Product Specification (Preliminary)**
**1. General Descriptions**

The LG LCD model LM151X2 LCD is a Color Active Matrix Liquid Crystal Display with an integral Cold Cathode Fluorescent Tube (CCFT) back light system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally white mode. This TFT-LCD has a 15.1-inch diagonally measured active display area with XGA resolution (768 vertical by 1024 horizontal pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots, which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 6-bit gray scale signal for each dot, thus, presenting a palette of more than 262,144 colors.

LM151X2 has been designed to apply the CMOS logic level interface.

The LM151X2 LCD is intended to support applications where high brightness, wide viewing angle, high color saturation, and high color depth are very important. In combination with the vertical arrangement of the sub-pixels, the LM151X2 characteristics provide an excellent flat panel display for office automation products such as monitors.

**General Display Characteristics**

The following are general features of the model LM151X2 LCD;

Active display area	15.1-inches (38cm) diagonal
Outside dimensions	352.6w x 265.0h x 18.5t(Typ.)mm (Without Inverter and User Connector)
Pixel pitch	0.30 mm $\times$ 0.30 mm
Pixel format	1024 horiz. By 768 vert. pixels RGB vertical stripe arrangement
Color depth	6-bit, 262,144 colors
Display operating mode	transmissive mode, normally white
Surface treatments	hard coating(3H), anti-glare treatment of the front polarizer

**4. Optical Specifications**

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 30 minutes in a dark environment at 25°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of  $\Phi$  and  $\theta$  equal to 0° and aperture 1 degree. The test equipment is PhotoResearch Prichard SpectroRadiometer Model 1980B-SC or equivalent. The input signal voltage and timing specification are  $V_{DD}$  of 3.3V and VESA XGA @60Hz respectively. The input current of backlight is 8mA( $F_{BL} = 50\text{KHz}$ ) at the ground terminals.
